**GENERAL INFORMATION**

Clinical neuropsychology focuses on how brain disorders and other clinical conditions of the brain affect cognition and emotion. These disorders and conditions include acquired or congenital neurological and neuropsychiatric conditions in children, adolescents and adults, such as ADHD, autism, stroke, brain tumours, traumatic brain injury, epilepsy, Alzheimer’s disease, Parkinson’s disease, multiple sclerosis, drug abuse, schizophrenia, bipolar disorder, depression, etc.

Clinical neuropsychologists can be involved in both the assessment and treatment of people with brain disorders in various applied and/or clinical settings, but also in patient related research. Methods used in the field of clinical neuropsychology include neuropsychological testing, neuroimaging and electrophysiological techniques. With the ageing population, the number of people with neuropsychological disorders rising and this is fuelling demand for well trained clinical neuropsychologists.

The aim of this Master’s degree programme is to equip you with advanced knowledge and skills and to train you in fundamental and applied research in an area of Clinical Neuropsychology. An important component of this programme is an independent, academic research project reported in a Master’s thesis. Half the study load is made up of courses and the other half consists of a Master’s project and thesis.
