datawyse, Maastricht, The Netherlands, 2000

This book is an updated version of the ‘Habilitationsschrift’ that was submitted in 1998 to the ‘Faculty of Psychology’ at the ‘Ruhr-University Bochum’, Germany
The study of behavioral dysfunctions:
an evaluation of selected animal models

F. Josef van der Staay
Contents

1 General introduction

2 Age-related changes in learning and memory in rats, assessed in the Morris water escape task
   • 2.1 Effects of age on Morris water escape behavior of outbred Wistar, hybrid Fischer 344*Brown Norway, and inbred Fischer 344 rats
   • 2.2 Effects of age on the acquisition of a standard Morris task and of a repeated acquisition task in Wistar rats
   • 2.3 Longitudinal assessment of spatial discrimination performance of aged rats in the Morris water escape task
   • 2.4 Shift in the performance of 24-month-old Wistar rats in the Morris water escape task: a comparison across thirty-six experiments
   • 2.5 Age-related changes in learning and memory in rats, assessed with the Morris water escape task: discussion and conclusions

3 Behavioral consequences of lesioning the nucleus basalis magnocellularis (nbm) in rats
   • 3.1 Bilateral lesioning of the nbm in rats: effects on spatial discrimination in the holeboard
   • 3.2 Effects of bilateral ibotenic acid lesions of the nbm on the performance of rats in a seven-choice problem in a radial alley maze
   • 3.3 Behavioral effects of bilateral lesions of the nbm, induced by ibotenic acid, in young adult and old Wistar rats
   • 3.4 Behavioral consequences of lesioning the nucleus basalis magnocellularis (nbm) in rats: discussion and conclusions

4 Behavioral effects of stroke induced by occlusion of the middle cerebral artery (MCA) in rodents
   • 4.1 Sensorimotor impairments in Wistar Kyoto rats with cerebral infarction, induced by unilateral occlusion of the MCA: recovery of function
   • 4.2 Sensorimotor impairments in rats with cerebral infarction, induced by unilateral occlusion of the MCA: strain differences and effects of the occlusion site
   • 4.3 Unilateral middle cerebral artery occlusion does not affect water-escape behavior of CFW1 mice
   • 4.4 Repeated acquisition of a spatial navigation task in mice: effects of spacing of trials and of unilateral middle cerebral artery occlusion
   • 4.5 Behavioral effects of stroke, induced by occlusion of the middle cerebral artery (MCA) in rodents: discussion and conclusions

5 The study of behavioral dysfunctions using animal models: summary, conclusions, and recommendations for future research
6 Appendices

- 6.1 Calculation of the measure 'choice correspondence of reinforced visits' in the spatial holeboard discrimination task. 251
- 6.2 Effects of age on the acquisition of a seven-choice task in a radial alley maze in rats 255
- 6.3 Effects of nucleus basalis lesions on proactive and retroactive errors in a seven-choice task in a radial alley maze 257
- 6.4 Is there recovery of cortical cholinergic activity in young and aged rats after bilateral lesioning of the nucleus basalis magnocellularis? 261
- 6.5 Acknowledgments 265
- 6.6 Publications 267
- 6.7 Abbreviations used 271
