The work described in this thesis was performed at the Department of Neuroscience and BCN NeuroImaging Center of the University Medical Center Groningen, The Netherlands, and was financially supported by a European Science Foundation EURYI grant awarded to Prof. Dr. A. Aleman.
IMAGING THE VULNERABLE BRAIN: 
Functional and Structural MRI in Psychosis Proneness 

Proefschrift 

ter verkrijging van het doctoraat in de 
Medische Wetenschappen 
aan de Rijksuniversiteit Groningen 
op gezag van de 
Rector Magnificus, dr. F. Zwarts, 
in het openbaar te verdedigen op 
maandag 26 april 2010 
ome 13.15 uur 

door 

Gemma Modinos Comellas 

geboren op 18 november 1980 
te Barcelona, Spanje
Promotores: Prof. Dr. A. Aleman
             Prof. Dr. J. Ormel

Beoordelingscommissie: Prof. Dr. E. Crone
                       Prof. Dr. J.E. Obiols
                       Prof. Dr. E.J.A. Scherder
## Contents

1 **Introduction** 7

2 **Empirical research** 25

2.1 Imaging the healthy brain 26
   2.1.1 Activation of Anterior Insula during Self-Reflection 27
   2.1.2 Individual Differences in Dispositional Mindfulness and Brain Activity Involved in Reappraisal of Emotion 39

2.2 Imaging the vulnerable brain 54
   2.2.1 Altered Activation and Functional Connectivity of Neural Systems Supporting Cognitive Control of Emotion in Psychosis Proneness 55
   2.2.2 Neural Correlates of Self-Reflection in Psychosis Proneness 71
   2.2.3 Neurobiological Correlates of Theory of Mind in Psychosis Proneness 87
   2.2.4 Schizotypy and Brain Structure: A Voxel-Based Morphometry Study 105

2.3 Imaging the psychotic brain 118
   2.3.1 Structural Covariance in the Hallucinating Brain: A Voxel-Based Morphometry Study 119

3 **General conclusions** 127
