

## Keynote

13:25-13:45 at the “Blauwe Zaal”

### **Koen Bandsma**

#### **A new way of looking at rules in the spatial environment**

In this study the structuration, environmental psychology and the complexity of sciences are connected with the aim to get an answer to the question of how and why rules affect the way that human act. This study argues that the interplay between rules and the actions of human, which rules emerge and change, are influenced by the environment. This is the study called the duality of structuration and environment. Several factors have been identified to have an influence on the operation of this duality, such as the layout of the environment, and activation control standard. The bicycle storage in the city of Groningen has been chosen as the case study.
