

Assessment plan for the curriculum of the Bachelor's degree programme in Physics, 2026-2027

Programme director: prof.dr.ir. C.H. van der Wal

Date of advice by the Board of Examiners: April 30, 2026

Date approval Faculty Board:

1. Vision on assessment

Objectives

The vision behind the Bachelor's degree programme in Physics is to organize and facilitate the teaching and training of the next generation of ambitious physicists. Its aim is to offer students a solid foundation to explore the boundaries of our understanding of the fundamental workings of nature. This is done by providing them with profound knowledge of general physics subjects, as well as more specialized ones and those at the interface with adjacent disciplines; by training them in performing scientific research; and by providing them with general academic skills. Independent and critical thinking, an open mind, enthusiasm for problem solving, skills in clear writing and exposition, and a dedication to physics both as an academic discipline and as a field that has strong connections to adjacent scientific disciplines and societal developments – these are important general objectives of the programme.

Assessment vision statement:

- The assessment guides and evaluates student learning in a diverse manner, with a focus on knowledge of physical concepts as well as relevant skills including problem-solving, collaboration, scientific reasoning and experimental lab work.
- The assessment stimulates students to adopt an active learning stance and to learn from their mistakes, by combining formative aspects at various stages and a summative assessment.
- The assessment stimulates students to approach problems from a physics perspective that observes, models and explains physical processes, thereby preparing them for further study or career in related science disciplines.

2. Assessment guidelines

Guidelines for assessment quality:

- The BSc programme consists of 165 ECTS worth of courses and a 15 ECTS research project. There are four 10-ECTS courses in the first two years of the programme, all other courses are 5 ECTS.
- The programme offers a variety of different assessment methods, assessing different learning outcomes and skills. The course assessment scheme can be found on Brightspace and Ocasys from the start of the course, and cannot be changed during the course (unless given explicit permission by the Board of Examiners).
- The majority of courses are assessed with an individual, written exam at the end of the course. A number of these courses have intermediate assessment moments as well, consisting of e.g. midterm exams or homework assignments, that contribute a fraction to the final grade.
- The 10-ECTS courses in the first year of the programme have a practical assignment as well, that needs to be completed with a pass grade before the full course can be passed.
- To facilitate preparation by the students for the final exam, a mock exam (for example an exam from a previous year) must be available, at least two weeks prior to the exam.
- A clear and explicit answer key for the exam is drawn up by the course coordinator to ensure the transparency and fairness of the grading process.
- Most resits of these courses consist of a single, individual, written exam. The examiner can opt for an oral exam in case there are very few students attending a resit. These are graded using the dedicated oral exam grading form and an independent observer (preferably the preassigned second examiner) must be present during the full exam. At the beginning of the exam, the student should be informed of the topics to be examined.
- Next to the courses with individual assessment, the programme also contains courses that are based on group work, e.g. practical or project-based courses. In these cases, the course grade is determined by presentations of the students as well as the final report that is handed in.
- Clear and explicit rubrics are available that facilitate the grading of the project as well as the

feedback to students.

Regarding the 15-ECTS research project at the end of the programme:

- The project takes place in one of the research groups and is supervised by an examiner of the programme;
- Weekly meetings with the (daily) supervisor will take place to discuss ongoing research activities and provide feedback. In addition, meetings with the supervisor should take place at least once every four weeks to evaluate overall progress.
- The first examiner should provide feedback on at least one full draft version of the thesis, provided the student meets the agreed deadline for handing in the full draft.
- The project is assessed by the first examiner and a second examiner from another research unit than the first supervisor, in order to ensure standardized and fair grading of the project.
- All written assignments must be checked for plagiarism before grading.
- All assessment and feedback, final and day-to-day, is provided in English to prepare students for further study and for careers in an international job market.

3. Learning outcomes of the degree programme

Learning Outcome:	
A. Generic learning outcomes - Knowledge	
A1	Bachelor's graduates have general knowledge of the foundations and history of mathematics, natural sciences and technology, in particular those of Physics.
A2	Bachelor's graduates have mastered the basic concepts of Physics (see Appendix 1 for further specification) and are familiar with the interrelationships of these concepts within their own discipline as well as with other disciplines.
A3	Bachelor's graduates have in-depth knowledge of several contemporary topics within Physics.
A4	Bachelor's graduates are familiar with the quantitative character of the fields of mathematics and natural sciences and have an understanding of the methods used in these fields, and particularly within Physics, including computer-aided methods.
A5	Bachelor's graduates have sufficient knowledge and understanding of mathematics and natural sciences to successfully complete a follow-up Master's degree programme in Physics.
A6	Bachelor's graduates are aware of the societal, ethical and social aspects involved in the fields of mathematics and natural sciences, and act accordingly.
B. Generic learning outcomes - Skills	
B1	(Research) Bachelor's graduates are able to draw up a research question, design, plan and conduct research and report on it independently with an appropriate degree of supervision. Bachelor's graduates are able to evaluate the value and limitations of their research and assess its applicability outside their own field.
B2	(Designing and Modeling) Bachelor's graduates are able to translate a physics problem into a plan of approach and – taking into account practical boundary conditions – find a solution.
B3	(Gathering information) Bachelor's graduates are able to gather relevant information using modern means of communication and to critically interpret this information.
B4	(Collaborating) Bachelor's graduates are able to collaborate in teams on technical-scientific problems.
B5	(Communicating) Bachelor's graduates are able to communicate orally and in writing in academic and professional contexts, with both colleagues and others. They are familiar with the relevant means of communication.
B6	(Reflecting) Bachelor's graduates are able to assess their own actions and those of others in a natural sciences context, bearing in mind the social/societal and ethical aspects.
B7	(Learning skills) Bachelor's graduates are able to apply learning skills that enable them to pursue a follow-up degree and acquire knowledge in new fields with a high level of autonomy.

B8	Additional subject-specific skills are listed in Appendix 2.
Appendix 1: Degree programme-specific learning outcomes - Basic Knowledge	
The Bachelor's graduate in Physics has:	
1.1	Knowledge of the most important subjects in the field of a) Classical and Relativistic Mechanics b) Electromagnetism c) Quantum Physics d) Thermodynamics e) Statistical Physics f) Wave phenomena, Oscillations and Optics g) Materials: structure and interactions h) Calculus and Linear Algebra
1.2	Knowledge of topics in at least one of the following research fields: a) Biophysics and Medical Physics b) Energy and Environmental Physics c) Nanophysics d) Particle Physics
1.3	Achieved in the Minor, a deeper knowledge of subjects within their own discipline or a broad general knowledge of a different discipline.
Appendix 2: Degree programme-specific learning outcomes - Skills	
The Bachelor's graduate in Physics is able to:	
2.1	estimate the orders of magnitude of various physical processes;
2.2	use specific software, such as a programming language or a (symbolic) software package;
2.3	setup and carry out an experiment, while taking into account the safety and environmental issues;
2.4	gain insight in the fundamental workings of nature through the analysis of experimental constructs and/or experimental data.

4. Overview of assessment methods, test moments for course units, and examiners

The abbreviations for the relevant teaching methods are explained in the legend of the table. Examples of assessment methods include:

- Written Exam (WE)
- Midterm (MT)
- Multiple Choice (MC)
- Oral Exam (OR)
- Report (R)
- Presentation (P)
- Practical Work (PR)
- Assignment (AST)
