Appendix Master degree programme Chemistry

Appendix I Learning outcomes of the degree programme (art. 1.3)

The objectives of the master’s degree programme Chemistry are:

- to prepare students for an independent professional career; in this context this means being able to carry out fundamental or applied scientific research, as well as applying state of the art scientific knowledge in a wide variety of new practical situations,
- to make students develop skills, knowledge and insight in a specialization area of the field of study, with a focus on insight in and approach to scientific problems,
- to make students develop the ability to clearly and concisely communicate the acquired knowledge to others.

The objectives of the programme result in the following learning outcomes

A. General academic skills for the master’s degree programme Chemistry

The graduate

A1. is able to keep up with and make use of professional literature in relevant subfields,
A2. is able to make himself/herself familiar with a subfield of the own discipline within a reasonable time span,
A3. is able to formulate a research plan based on a problem description in a subfield of the own discipline,
A4. is able to analyze, interpret using state of the art information, and draw conclusions from research results,
A5. is able to operate effectively in a position in which knowledge and research skills within the field of the own discipline are required,
A6. is able to perform in a multidisciplinary team, transfer knowledge to others, give oral presentations, write a report or internationally accessible scientific article, and take part in a scientific discussion,
A7. is able to design, conduct and evaluate experiments and the necessary checks and balances independently,
A8. is able to relate his/her own results and conclusions to results already available in the literature,
A9. has sufficient understanding of the role of the own discipline in society to come to a well-considered choice and practice of profession,
A10. has an understanding of the role of the own discipline in a sustainable society.

B. Specific academic knowledge and skills for the master’s degree programme Chemistry.

The graduate has advanced knowledge of aspects of one of the following fields of knowledge:

- Advanced Materials: synthesis, characterization and properties of materials; the relation between chemical and physical properties of materials on the one hand and the nature of the chemical bonding, and molecular and crystal symmetry on the other hand.
- Catalysis and Green Chemistry: reactions and interactions of molecules and the application of this insight in synthetic chemistry and catalysis as well as knowledge about sustainable chemistry.
- Chemical Biology: behavior and design of biochemical systems and their functional properties. Synthetic biology as well as protein engineering.
The graduate:
B1. is able to judge whether the properties of created products and possible side or waste products can result in undesired side effects in the short or long term,
B2. is able to work at academic level on a research problem in an area of chemistry, which is not his/her own main field of study,
B3. (Science, business and policy-specialization) is prepared for a professional career in management and policy.

Appendix II  Tracks/Specializations of the degree programme (art. 2.2)
The degree programme has the following tracks:
• Advanced Materials
• Catalysis and Green Chemistry
• Chemical Biology
• Science, Business and Policy
• Within the degree programme qualified students can follow the Erasmus Mundus programme Theoretical Chemistry and Computational Modelling (TCCM). For this programme the Erasmus Mundus TCCM regulations, as laid down in the consortium agreement of the programme, the student agreement and the SGA agreement with the EACEA, apply.

Appendix III  Content of degree programme (art. 2.3)
The programme comprises 120 ECTS; of which it comprises 60 ECTS in courses (compulsory courses, track courses and electives), a research project of 45 ECTS and a second research project of 15 or 20 ECTS.

Compulsory course units for Master Chemistry:
Practicals are defined as labpracticals

<table>
<thead>
<tr>
<th>Course unit</th>

**Erasmus Mundus programme Theoretical Chemistry and Computational Modelling (TCCM)**

The first year of the programme is arranged locally at the home university of the student, and must comply with the Erasmus Mundus TCCM regulations. The first year for those students whose home university is the University of Groningen is as follows:

<table>
<thead>
<tr>
<th>Course unit</th>
<th>ECTS</th>
<th>Practical</th>
<th>Entry requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reaction Mechanisms</td>
<td>5</td>
<td></td>
<td></td>
</tr>

<td></td>
</tr>
<tr>
<td>Colloquium</td>
<td>5</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Final Exam</td>
<td>5</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Molecular Quantum Mechanics 1</td>
<td>5</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Appendix IV  Electives (art. 2.4)

The elective courses are specializing and can be selected from the entire master degree program in Chemistry. In order to provide a guideline for the student that wants to specialize in a particular field, package choices have been defined (vide infra). The student can request the board of examiners to be allowed to select a particular course outside the master in Chemistry programme.

Students are allowed to add 5 ECTS from the electives to their second research project.

</tr>
</tbody>
</table>

A student is allowed to follow one of the electives of the Education-Communication master.

The course units ‘Interfacial Engineering’ and ‘Colloid and Interface Science’ have a large overlap, therefore only one of both course units may be included in an individual’s programme.

In the first year of the programme, 10 ECTS out of the total of 60 ECTS credits may be required to levelling courses for those students who, on the advice of their local tutor and after approval of the Board of Examiners, need to upgrade their level in different fields within the Faculty of Science and Engineering.

Elective courses complete the total number of ECTS of the first year of the programme to 60 ECTS.
Appendix V Entry requirements and compulsory order of examinations (art. 3.4) Entry requirements are mentioned in tables appendices III and IV.

Appendix VI Admission to the degree programme and different specializations (art. 5.1.1 + art. 5.2) Holders of the following Bachelor’s degrees from the University of Groningen are considered to have sufficient knowledge and skills and will be admitted to the Master’s degree programme in Chemistry on that basis:
- BSc Chemistry
- BSc Biology/ Life Science & Technology – major Molecular Life Sciences provided that the elective Practical course Chemistry for Life Sciences is part of the student’s bachelor programme.

Appendix VII Extra effort for obtaining a master’s degree in a closely related programme (art. 3.17) Not applicable.

Appendix VIII Application deadlines for admission (art. 5.6.1)

<table>
