

"A cooperation of Leuphana University and the
University of Groningen"

Double Degree Master Sustainability and Environmental Psychology

This double degree master's integrative approach towards two expert fields equips you to better address today's grand, sustainability challenges from a psychologist perspective. The programme, exceptional in Europe and beyond, is offered by Leuphana University, renowned in the field of sustainability science and University of Groningen, leading in the field of environmental psychology.

Why study this programme?

This master

- is a unique master that directly addresses the grand, pressing societal challenges of sustainability and climate change;
- trains you to address those pressing issues on multiple levels (individuals, organisations, policy, governance, etc.);
- offers joint supervision, lectures and active debates covering different disciplines related to climate change and sustainability;
- allows you to work on real-life problems in multiple courses and master thesis research;
- allows you to explore the existing networks for internship possibilities;
- provides you with possibilities for interdisciplinary collaboration (critical for addressing sustainability problems!);
- will prepare you well for the global labour market, both in and outside academia.

Course examples

- Introduction to Psychology and Sustainability
- Environmental Psychology
- Designing interventions
- Research methods: Interdisciplinary Approaches
