

MSc Educational Sciences: Learning in Interaction

The Learning in Interaction track teaches students about the complexity of cognitive and social learning processes. Our graduates learn skills to design and analyze learning environments with a strong focus on why and under which circumstances learning occurs.

Within Learning in Interaction, students are prepared to function at an academic level for functions within the design and evaluation of specific learning situations and learning materials, in order to enhance education in terms of effectiveness, efficiency and enjoyability. They do so from the perspective of student diversity, interaction between students and teachers, interaction with artefacts and self-regulated learning.

This programme has a strong thesis supervision, has contacts with the educational field and promotes internships.
