

DDM Sustainability and Environmental Psychology

This double degree master's integrative approach towards two expert fields equips you to better address today's grand, sustainability challenges from a psychologist perspective. The programme, exceptional in Europe and beyond, is offered by Leuphana University, renowned in the field of sustainability science and University of Groningen, leading in the field of environmental psychology.
This master

- is a unique master that directly addresses the grand, pressing societal challenges of sustainability and climate change
- trains you to address those pressing issues on multiple levels (individuals,organisations, policy, governance, etc)
- offers joint supervision from both universities for your Master thesis research, joint lectures and active debates covering different disciplines
- allows you to work on real-life problems in multiple courses and master thesis research
- allows you to explore the networks of both universities for internship possibilities
- provides you with possibilities for interdisciplinary collaboration (critical or addressing sustainability problems!)
- will prepare you well for the global labour market, both in and outside academia

Application deadline

EU degrees: 1 June
Non-EU degrees: 1 May
