PhD Defences in 2015

4 July, Sandra Beckerman

Corded ware coastal communities. Using ceramic analysis to reconstruct third millennium BC societies in the Netherlands

Promotor: Prof. Dr. D.C.M. Raemaekers, Co-promotor: Dr. S. Arnoldussen

8 July, Annet Nieuwhof

Eight human skulls in a dung heap and more. Ritual practice in the terp region of the northern Netherlands, 600 BC - AD 300

Promotor: Prof. Dr. D.C.M. Raemaekers, Co-promotor: Dr. S. Voutsaki, Dr. J. Bazelmans

14 September, Tekke Terpstra

Inuit outside the Arctic. Migration, Identity and Perceptions

Promotor: Prof. Dr. L. Hacquebord, Co-promotor: Dr. M. Nuttall

Current PhD Projects

Prehistory and Protohistory of Northwest Europe

Bakker, M. (Wadden Academy : University Campus Fryslân, University of Groningen/Groningen Institute of Archaeology, 2013-2017)

The Frisian peat reclamations of the Late Iron Age and Roman Iron Age

Promotores: Prof. Dr. G.J. de Langen. Prof. Dr. D.C.M. Raemaekers, and Prof. Dr. ir. M. Spek. Co-promotor: Dr. J.A.W. Nicolay.

Drenth, E.

The Beaker Cultures in Northwest Europe

Promotor: Prof. Dr. D.C.M. Raemaekers.

Krol, T.N.

Anglo-Saxon pottery of the Northern Netherlands in a regional and cultural context

Promotor: Prof. Dr. G.J. de Langen. Co-promotores: Prof. Dr. D.C.M. Raemaekers, Drs. A. Nieuwhof.

Matthews, S.G.

Techniques and Society: A use-wear analysis of the metalwork from the Middle Bronze Age of North-western Europe

Promotor: Prof. Dr. D.C.M. Raemaekers. Co-promotores: Prof. Dr. S. Hamilton, Dr. S. Arnoldussen.

Niekus, M.J.L.Th.

Stone Age Occupation of the northern Netherlands, Time, Space, Location and Subsistence

Promotor: Prof. Dr. D.C.M. Raemaekers.

Nobles, G.R.

Spatial analysis of Late Neolithic settlements in the province of Noord-Holland (The Netherlands) and interregional comparison

Promotor: Prof. Dr. D.C.M. Raemaekers. Co-promotor: Dr. J.H.M. Peeters.

Overmeer, A.B.M.

Dutch clinker-built ships in the 15th and 16th centuries

Promotores: Prof. Dr. D.C.M. Raemaekers, Prof. Dr. H.R. Reinders, Prof. A.F.L. van Holk.

Popta, Y.T. van (NWO, 2014-2018)

From sweet to salt: dynamics of the maritime cultural landscape of the Northeastern Zuiderzee between 1100 and 1400 AD. An interdisciplinary and spatial approach

Promotores: A.F.L. van Holk, D.C.M. Raemaekers. Supervisor: M. Spek.

Postma, D. (University of Groningen/Groningen Institute of Archaeology, 2011-2015)

Lost building traditions: turf construction and early medieval architecture in the southern North Sea area

Promotor: Prof. Dr. G.J. de Langen.

K. de Roest (University of Groningen/Groningen Institute of Archaeology, 2015-2019)

Properly put to rest? A multi-angled study into individual and collective burial rites in Northwest Europe c. 1000 BC-500 AD

Promotor: Prof. Dr. D.C.M. Raemaekers. Co-promotor: Dr. S. Arnoldussen.

Varwijk, T.W. (Province of Fryslân, Municipality of Súdwest-Fryslân, Municipality of Littenseradiel, University of Groningen/Groningen Institute of Archaeology, Vereniging voor Terpenonderzoek, 2013-2017)

Settlement development of Frisian Terp sites from the Early Iron Age to the Late Middle Ages

Promotores: Prof. Dr. G.J. de Langen, Prof. Dr. D.C.M. Raemaekers. Co-promotor: Dr. J.A.W. Nicolay.

K. de Vries (ARCHON, 2015-2019)

Settling with the norm? Norm and variations in social groups and their material manifestations in (Roman) Iron Age settlement sites of the northern Netherlands

Promotor: Prof. Dr. D.C.M. Raemaekers. Co-promotor: Dr. S. Arnoldussen.

Waldus, W.B. (Erfgoedcentrum Nieuwland, 2014-2016)

De Zuiderzee als verkeersplein, de rol van de binnenvaart bij de economische ontwikkeling van de Lage Landen (1550-1900)

Promotores: Prof. Dr. A.F.L. van Holk. Co-promotor: Prof. Dr. D.C.M. Raemaekers.

Woltinge, I.

What lies beneath? The value of buried Stone Age landscapes

Promotor: Prof. Dr. D.C.M. Raemaekers.

Crudo, M.

Greek and indigenous cultural encounters in 8th century BC South Italy - a pottery perspective.

Promotor: Prof. Dr. P.A.J. Attema.

Fischetti, A.L.

Ciampino: Marcandreola locality and the so-called via Castrimeniense

Promotor: Prof. Dr. P.A.J. Attema.

Klein Goldewijk, G.M.

Standard of living in the Roman Empire

Promotor: Prof. Dr. P.A.J. Attema. Co-promotores: Dr. W.M. Jongman, Dr. J.P.A.M. Jacobs.

Hansen, A.M. (NWO, 2014-2018)

The agricultural economy of Islamic Jordan, from the Arab conquest tot the Ottoman period.

Promotor: Prof. Dr. R.T.J. Cappers. Co-promotores: Dr. B.J. Walker, Dr. W.M. Jongman.

Heinrich, F.B.J. (NWO, 2012-2016)

Productive Landscapes: An interdisciplinary inquiry into the productivity of crop husbandry

Promotores: Prof. Dr. R.T.J. Cappers, Prof. Dr. P.A.J. Attema. Co-promotor: Dr. W. M. Jongman.

Ippolito, F.

Settlement dynamics in the hinterland of the Sibaritide (Calabria, Italy)

Promotores: Prof. Dr. P.A.J. Attema, Prof. Dr. M. Pacciarelli.

Loon, T. van (NWO, 2010-2015)

Defining the ritual, analyzing society. The social significance of material culture in pre-Roman cult places of central Italy (ca. 900-400 BC)

Promotor: Prof. Dr. P.A.J. Attema.

Masci, M.F.

The production of Oinotrian geometric pottery in southern Italy (Calabria, Basilicata and Campania) during the Iron Age: a comparative study on technological aspects

Promotor: Prof. Dr. P.A.J. Attema. Co-promotor: Dr. A.J. Nijboer.

Neef, W. de (NWO, 2010-2015)

Rural life in Protohistoric Italy: relating sub-surface remains to archaeological survey data

Promotor: Prof. Dr. P.A.J. Attema. **Co-promotor:** Dr. P.M. van Leusen. **Oome, N.**

Hellenistisch aardewerk en Hellenistische sites in de Sibaritide

Promotor: Prof. Dr. P.A.J. Attema.

Roovers, H.P.A.

De impact van de bevolkingstoename in de Hellenistische periode in Magna Grecia

Promotor: Prof. Dr. P.A.J. Attema.

Satijn, O.

A socio-economic and political landscape archaeology of transition: southern Lazio from the Late Roman period to incastellamento

Promotor: Prof. Dr. P.A.J. Attema.

Seubers J.F. (NWO, 2011-2015)

The Settlement of Crustumium and its hinterland (800-450 BC)

Promotor: Prof. Dr. P.A.J. Attema.

Weistra, E.

Archaic terracotta votive offerings from the Athenaion in Francavilla Marittima (Calabria, Italy)

Promotor: Prof. Dr. P.A.J. Attema.

Dijkstra, T. (NWO, 2012-2016)

Civic and Cultural Identities in a Changing World: Analyzing the mortuary practices of the postclassical Peloponnese

Promotores: Prof. Dr. S. Voutsaki, Prof. Dr. O.M. van Nijf.

Jones, O. (University of Groningen/Groningen Institute of Archaeology, 2012-2016)

Mycenaean Burial Traditions of Achaea: An Anthropological and Bioarchaeological Approach

Promotor: Prof. Dr. S. Voutsaki.

Kalenderian, V. (Rosalind Franklin Fellowship, 2014-2018)

Osteological Analyses and an evaluation of mortuary Practices and cultural exchange

Promotor: Prof. Dr. S. Voutsaki.

Milka, E.

Mortuary differentiation and social structure in the Middle Helladic Argolid

Promotor: Prof. Dr. S. Voutsaki.

Panagiotopoulou, E. (University of Groningen/Groningen Institute of Archaeology, 2012-2016)

The transition from the Bronze Age to the Iron Age in Greece: isotopic analysis of skeletal remains from sites of Central Greece

Promotors: Prof. Dr. S. Voutsaki, Prof. Dr. H. van der Plicht. Supervisor: Dr. A.

Papathanasiou.

Arctic and Antarctic Studies

Admiraal, M. (University of Groningen, 2015-2019)

Prehistoric food technologies, maritime adaptations and climate change in the North Pacific

Promotor: Prof. Dr. P.J. Jordan

Comis, S.

Het textiel van Spitsbergen

Promotor: Prof. Dr. L. Hacquebord.

Dresscher, S.J. (University of Groningen, 2014-2017)

Surviving off the land and sea: understanding the expansion of European commercial hunting systems into the High Arctic - a case-study of Pomors on Spitsbergen (18th-first half 19th century).

Promotor: Prof. Dr. P.J. Jordan

Gustafsson, U.I.

The exploitation of natural resources by the early 20th century whaling industry; its impact on the environment and the geo-political situation in the Polar Regions

Promotor: Prof. Dr. L. Hacquebord. Co-promotor: Dr. D. Avango.

Haas, H.R. de

The coal exploitation of the Dutch Spitsbergen Coal Company (NESPICO) Green Harbour in its national and international context

Promotor: Prof. Dr. L. Hacquebord. Co-promotor: Dr. J.W. Veluwenkamp.

Jong, M.E. de (NWO, 2014-2018)

From historical data to a prediction of the future for geese on Arctic tundra

Promotor: Prof. Dr. P.J. Jordan. Supervisor: Dr. M.J.J.E. Loonen.

Steenhuisen, F. (Extern, University of Groningen)

A GIS model of Mercury emission and deposition in the World.

Promotor: Prof. Dr. L. Hacquebord.

Cornelisse M. (Extern, School voor Toerisme Breda)

Betekenis van duurzaam en experienced-based toerisme voor Ylläs, Finland.

Promotor: Prof. Dr. L. Hacquebord.

Steenbeek, S.

De Friese schippers in de Sontvaart en de Nederlandse markt voor maritime transport (1550-1800).

Promotor: Prof. Dr. L. Hacquebord. Co-promotor: Dr. J.W. Veluwenkamp.

Sandström, C.A.M.

Health and immunology of Arctic breeding birds

Promotor: Prof. Dr. A.G.J. Buma, Prof. Dr. L. Hacquebord. Co-promotor: Dr. M.J.J.E. Loonen.

Research results

Arctic and Antarctic Studies

Exploration and resource development in polar areas

Prehistoric food residues, maritime adaptations and climate change in the North Pacific (Admiraal, M.)

During this first year of the PhD project good progress has been made. A chapter was written based on a critical review of the available literature on SW Alaskan pottery and stone bowl technology. Contacts were made at the University of York and Aberdeen and during the summer a research trip was undertaken to the United States: Washington DC, Eugene, OR, Anchorage, Dutch Harbor and Kodiak, AK. During this trip 90 archaeological samples were collected that will be used for organic residue analysis.

Timemanagement op Spitsbergen. Een historisch-archeologische benadering van Pomoren in de 18de eeuw (Dresscher, S.)

Time-management on Svalbard / Spitsbergen. A historical-archaeological perspective on 18th-century Pomor hunters. Past peoples living in the Arctic had to deal with seasonal extremes. They needed to plan ahead and make vitally important choices concerning where to live, what and when to hunt, and what to store for later use. This kind of planning and time-management was vital for hunter-gatherers living across the Arctic. But for those Russian hunters from the White Sea area (Pomors) who went to Svalbard on hunting expeditions, extra complexity was added to this schedule: extraction of commercial trade goods. They had to manage a balance between subsistence needs and the commercial hunting schedule.

Pomor archaeology on Edgeoya, Svalbard (RiS ID 10194), August 19 - 28, 2015. Interim fieldwork report. (Kruse, F., Dresscher, S. & Koeweiden, M.)

During the SEES expedition the archaeologist conducted fieldwork on two different Pomor sites on the island Edgeoya, Svalbard. Because our time was limited and we had no permission for excavating the sites we decided on a phosphate survey around the huts. In the past many Pomor huts in the archipelago of Svalbard have been excavated, but little is known about the use of the surroundings of the huts by Pomors. By looking at the phosphate concentrations around the hut, we hope to understand more about where they slaughtered animals and where the bathrooms were.

Rise of Maritime Adaptations in Arctic Europe (Jordan, P.D., Damm, C. (University of Tromsø), Skandfer, M (University of Tromsø)

This new collaboration with archaeologists from the University of Tromsø aims to understand the rise of maritime adaptations in Arctic Norway. In August 2015 a series of evaluations were conducted at sites and landscapes across eastern and western Finnmark to identify the best locations for a long-term fieldwork project. Soroya Island was selected, and will see fieldwork from summer 2016.

The consequences of 400 years natural-resource exploitation in Svalbard (Kruse, F.)

The project looks at the consequences of 400 years of natural resource exploitation (whaling, sealing, hunting, trapping) on essentially an Arctic island ecosystem. As a first step, I reconstructed human presence over the last four centuries. This will be followed by a collation of all published historical catch data and furthermore an

indication of past ecosystems as recorded in historical sources. Fieldwork in 2014 and 2016 will support the archival research. A synthesis of the results is expected at the end of 2016.

Environmental change and pollution in the Arctic

From historical data to a prediction of the future for geese on arctic tundra (M.J.J.E. Loonen, M.E. de Jong)

In this new Ph.D. project Margje de Jong started analysing experiments with captive goslings from 2013 and 2014. She is focussing on the effect of environmental quality on gosling growth and immune system development.

Consequences of global change on the Arctic foodweb (M.J.J.E. Loonen, J. Prop)

The Arctic is warming rapidly and the University of Groningen has collected long time series on phenology of plants, insects, geese, terns, foxes and polar bears. The structure of the food web is changing as a consequence of change. Our research unravels ecological consequences and changes in trophic interactions.

Classical and Mediterranean Archaeology

Landscape, settlement, ritual and society in protohistoric and Roman Italy

Preliminary works at La Sassa Cave (L. Alessandri) (Rolfo, M. F. (University of Rome Tor Vergata))

The La Sassa cave was discovered in 2014. A Bronze age deposit, with hundreds of potsherds and animal bones were present in the inner portion of the cave. Human bones were also present in two different lateral branches of the cave. In July 2015, the potsherds and the bones have been collected and a general plan of the cave has been made. The ceramic can be dated to the Middle Bronze Age, sub-phase 2. The cave represents a great opportunity to study the funeral practices in the Bronze Age and to better assess the chronological sequence of the Bronze Age of the central Tyrrhenian Italy.

Crustumium; The People and the State (Attema, P.A.J., Nijboer, A.J.)

The 2015 GIA campaign involved excavations at Crustumium and some prospecting research on the settlement directed by Attema. Nijboer was in July involved in material studies of a hut feature dated around 800 BC that was excavated by the SSBAR. In addition he stayed in or around Rome in March/April and in October as part of a sabbatical to write on the NWO-project 'The People and the State' that is completed in 2015. He wrote 3 chapters on the final publication/book and participated in texts and plans for the exhibitions on Crustumium in 2016 in Copenhagen and in Amsterdam.

Concepts of Fortifications in and around Rome, 1000-400 BC (Nijboer, A.J.)

Completed research and paper on 'Concepts of Fortification in and around Rome, 1000-400 BC'. Paper was accepted for publication (forthcoming) and is the result of a session on fortifications during the 2015 EAA meeting in Istanbul.

Methods and approaches of archaeological detection in Mediterranean landscapes

Ciampino: Marcandreola locality and the so-called Castrimense Road (Fischetti, A.L.)

I began my research on October 1st. In these three months I have focused my research on:

- creation of the data base on our ceramic findings in the sites crossed by Castrimeniense Road
- analysis of 30 boxes of ceramic fragments (cleaning of the fragments, recognition of different ceramic classes, recognition of different fragments belonging to the same vase)
- organisation for the training of Dutch and Italian students from Groningen and Sapienza Universities, with the support of the KNIR (February 8th-26th). The training concerns work on ceramics, visits to the most important archaeological sites in Ciampino, examination of Middle Republican ceramics in the Lanuvio museums, report on the ancient road system in Suburbium, an approach to ceramic conservation work and to experimental work on modelling vases
- realisation of the georeferenced-orthophoto of Marcandreola site

Economy and living standards in the Roman World

The Minor Centres Project (de Haas, T.C.A., Tol, G.W., Borgers, B., Armstrong, K., Sevink, J., Attema, P.A.J.)

2015 was the last full year of the project (in full: Fora, stationes and sanctuaries: the role of minor centres in the economy of Roman central Italy). Whilst fieldwork for the project was concluded in 2014, this year two campaigns were organized to finalize the study of collected archaeological materials (January and July) and to conduct some final coring (July). The study of collected materials included the conclusion of the basic processing of all finds (classification, selection, drawing and photographing, by Tol with the help of students), additional sample selection for petrographic study by Borgers and specialist studies of specific finds categories, namely building materials (M. Mandich, University of Leicester), coins (P. Calabria (University of Rome La Sapienza), glazed pottery (L. Orlandi, independent researcher) and Republican black gloss, amphorae and coarse wares (A. Ferrandes (La Sapienza University of Rome), M. Revello Lami (University of Amsterdam). During one day of coring, De Haas and Sevink established that the lack of archaeological sites west and south of Forum Appii in part relates to post-Roman depositional processes.

The phase of data acquisition being concluded, 2015 was mainly dedicated to the preparation of the database and GIS for analysis, the preparation of publications and the divulgation of results among the academic community and the general public. In addition, De Haas and Tol organized a closed two-day workshop in which the project researchers shared their preliminary results with a select group of invited specialists. Tol and De Haas finalised the manuscript of the proceedings of the 2013 conference (to be published with BRILL in 2016) and started work on the project synthesis, the archiving of the project (to CIDOC-CRM standards) and on various valorization deliverables (preparation of an exhibition to be held in the Museo dell'Agro Pontino in March 2016 and an accompanying book; preparation of an archaeological map of the municipality of Pontinia). Project members contributed to various conferences and workshops, and worked on their scientific deliverables.

The agricultural economy of Islamic Jordan, from the Arab conquest to the Ottoman period (Hansen, A.M.)

Archaeobotanical assemblages from four sites in the study area were analysed. Major economic plants from the Mamluk period (13th-15th century AD) were identified alongside arable (and wild) weed species. The quality and the richness of the material

is suitable for further analyses and will provide a useful diachronic comparison with material from the other periods where changes in the crop-selection strategies will be considered. These results also provide a calibration for the agricultural strategies discussed in contemporary Arabic texts.

Productive Landscapes. An interdisciplinary inquiry into the productivity of crop husbandry in the Roman Empire: 200 B.C. – A.D. 500 (Heinrich, F.B.J.)

In 2015 the focus of the project was on writing and finishing the final analyses and chapters on the regional case-studies. The model was improved and extended, with particular attention to theoretical concerns and biochemical considerations. In addition fieldwork was conducted and samples collected at Sai Island, the Sudan.

Greek Archaeology

Social change and cultural interaction in the prehistoric and protohistoric Aegean

AMS Dating of a Mycenaean Tholos Tomb (van der Plicht, H., Papazoglou-Manioudaki, L. (National Museum of Greece), Petropoulos, M. (Ephorate of Achaia))

Submitted 8 human bone samples for AMS dating. Two samples were successful allowing a reconstruction of the reuse within the tholos tomb. All dates were from the Mycenaean period despite the multiple levels of reuse and abnormal burial style of some of the deposits.

The Process of Mycenaean Burial: Taphonomic Study of Human Remains from Achaia (Jones, O. A.)

A study of primary and non-primary manipulated burial contexts was conducted focusing on the archaeological context and the human remains. Results showed that the practice of secondary burial, although often "identified" in Mycenaean studies due to the practice of piling bones, was rarely attested in the study sites. More commonly, bodies were manipulated after full decomposition and bones were not selected for reburial but moved aside presumably to make space for later burials.

Ayios Vasilios. A survey of the palatial site (Wiersma, C.W., Voutsaki, S., Vasilogamvrou, A. (Director Emerita of Laconia Directorate))

From October 14-November 4 a survey campaign was carried out at the Mycenaean settlement of Ayios Vasilios, Laconia, Greece. The survey is co-directed by S. Voutsaki and A. Vasilogamvrou, while C.W. Wiersma acts as the field director.

The aims of the campaign were to survey and sample the main center of the palatial town, as well as areas some distance away from the center. During the survey we wanted to test various survey and find collection strategies, as well as the various designed fieldwork forms and finds processing forms.

The campaign has resulted in the intensive survey of over 300 units of 10x10 m or 20x20 m in size, covering a total area of ca. 4.3 ha. A significant part of the palatial town was covered, as well as areas further south of the center where find densities were lower. The various forms have been tested and received adjustments where necessary.

All the finds collected have been washed and bagged and most units received a preliminary description. The impression thus far is that most of the find collections consists for 90% of tile fragments. In addition, the number of historic finds is larger than expected. Furthermore, we have gained a general impression of the location of the southern boundary of the settlement.

Diet, mobility and society in the prehistoric and protohistoric Aegean

What can we learn from stable isotopes?, (Panagiotopoulou E.)

In the workshop “Death in the Greek World”, Netherlands Institute Athens, 23 March – 1 April 2015 in Athens, I presented the preliminary results on the isotopic analysis and a thorough explanation of what the isotopic analysis is and how we can use it.

Grounds of memory in Early Iron Age Thessaly: connectivity and interaction, an isotopic approach (Panagiotopoulou, E.)

In the U4 International Winterschool Antiquity, Koninklijk Nederlands Instituut Rome (KNIR), Rome, 3-8.03.2015, I presented the strontium isotope analysis. the audience comprised mostly of ancient historians and few archaeologists. I explained the potential of the method.

Μελέτη της διατροφής στην Πρωτογεωμετρική Θεσσαλία με τη χρήση σταθερών ισοτόπων (Panagiotopoulou, E.)

In the 5th Archaeological Meeting of Thessaly and Central Greece, 2012-2014, Volos, 26.02 – 01.03.2015, I presented an overview of my PhD project in the Groningen Institute of Archaeology.

Ανθρωπολογικές αναλύσεις στο σκελετικό υλικό του νεκροταφείου ενταφιασμών της Εποχής του Σιδήρου στη θέση «Βουλοκαλύβα», αρχαία Άλος (Tsiouka, F., Panagiotopoulou, E, Papathanasiou, A.)

In the 5th Archaeological Meeting of Thessaly and Central Greece, 2012-2014, Volos, 26.02 – 01.03.2015, the results of the mortuary analysis of the cemetery of Voulokaliva were presented.

The Integration of Stable Isotopic and Contextual Analysis of Mortuary Data from Early Iron Age Halos, Greece (Panagiotopoulou, E.)

In the session at the AIA “Getting Elemental: Integrating Isotopes and Archaeology”, 8-11 January 2015, I presented the results of carbon and nitrogen analysis for diet reconstruction from the cemetery of Voulokaliva, Halos, Greece.

Social change and cultural interaction in the Hellenistic and Roman eastern Mediterranean

Civic and Cultural Identities in a Changing World. Analyzing the Mortuary Practices of the Postclassical Peloponnese (Dijkstra, T.M.)

In 2015 the research project was focused on the history of Classical and Hellenistic Peloponnese, and its relation to change and continuity in the mortuary practices of Patras. These results form the context for the research previously undertaken: the changes in the mortuary practices after Roman colonization of the city of Patras. The analysis of tombs, inscriptions and grave goods of the Classical-Hellenistic period show that, although Patras was generally thought to be but a marginal city in the history of ancient Greece, after the destruction of Corinth, the city became more prominent and its inhabitants more affluent. In general, though, there is no significant degree of differentiation between the mortuary practices other than the wealth of the grave goods. This is markedly different from the early Roman period, when the people used their tombs in a competition for the most unique memorial of the moment.

Note: The research was presented at the Annual Meeting of the American Institute of Archaeology in New Orleans, in a session organized by Lidewijde de Jong and

Tamara Dijkstra on 'Burial and Commemoration in the Roman Provinces'. (An OIKOS travel grant was awarded to (partly) cover the costs for this trip).

Erbil Plain Archaeological Survey (de Jong, Lidewijde, Ur, Jason (Harvard University))

This project investigates the long-term impact of ancient empires on the rural landscape of North Iraq (Kurdistan) by combining a study of historical satellite and aerial photographs with on the ground survey. The projects hosts various international scholars specialized in the prehistoric, Bronze Age, Iron Age, Sassanian, and Early Islamic periods. The GIA involvement concentrates on the Hellenistic though Roman-Parthian centuries.

North Mesopotamia between Alexander and Djenghis Khan (de Jong, Lidewijde, Palermo, Rocco (Università degli Studi di Napoli Federico II))

This research project concentrates on the archaeology, history, and environment of North Mesopotamia in the Classical, Byzantine, and Early Islamic era.

Burial and Commemoration in the Roman province (de Jong, Lidewijde, Kalenderian, Vana, Hürmüzlü, Bilge (Isparta University), van der Linde, Dies (Koç University))

This umbrella project consist of several initiatives aimed at the study of burial practices in the Roman provinces, combining archaeological, epigraphic, osteological, and literary evidence.

Necropoleis Research Network (de Jong, Lidewijde, Voutsaki, Sofia, Panagiotopoulou, Eleni, Kalenderian, Vana, Jones, Olivia, Hürmüzlü, Bilge (Isparta University), Ersoy, Yaşar (HİTİT ÜNİVERSİTESİ), Kelp, Ute (DAI - Berlin), Slawish, Anja (DAI - Istanbul), van de Linde, Dies (Koç University))

The Necropoleis Research Network aims to bring together people working on any aspect of mortuary archaeology in the Eastern Mediterranean and the Near East between the Dark Ages and the Late Roman periods (all loosely defined). Although mortuary remains –arguably - represent one of the most dominant categories of evidence for this period/region, we feel that its scholars are widely scattered, not only geographically, but also in terms of methodological and theoretical approach. We believe that we can benefit greatly from closer collaboration. Furthermore, advances in study of human remains are opening the field to new questions of relevance to all mortuary archaeologists. This network is primarily intended to facilitate an exchange of ideas and methodological best practices.

'Resurrecting' Berytus: Osteoarchaeological Analysis and an Evaluation of Mortuary Practices and Cultural Exchange (1st century BC- 4th century AD) (-)

The first year of this PhD project, which commenced in January 2014, was completed and involved primarily the refining of the research design and plan. My research centres on the investigation of the socio-cultural changes accompanying the establishment of a Roman colony in the city of Berytus (modern Beirut, Lebanon) through the assessment of mortuary practices and human skeletal remains. Necessary background information on the Roman Near East and mortuary archaeology was as such gathered throughout the year, and during a research visit to Lebanon in June, the burial sites that will be investigated during the second and third years were selected, based on the level of skeletal preservation as well as burial variation.

Resurrecting Berytus (Vana Kalenderian)

The second year of my PhD consisted of data collection undertaken in Beirut, Lebanon where the material being analysed in my research is stored. A database was developed in which all the information from the Roman and Hellenistic period burials is being entered, as well as data from the ongoing skeletal assessment. Contacts with professionals undertaking isotope analysis in archaeological contexts were established and meetings were held to better plan for the implementation of similar analyses in this research project.

Prehistoric and Protohistoric Archaeology of North-west Europe

The development of cultural landscapes

The fabric of the prehistoric cultural landscape in the 3rd to 1st millennium BC (Arnoldussen, S.)

Using excavation data from the Northern Netherlands, several studies into the composition and long-term dynamics of prehistoric cultural landscapes were undertaken. From this perspective, Neolithic, Bronze Age and Iron Age landscapes have been investigated.

Using the large-scale excavations of Angelslo-Emmerhout, Anlo and Noordbarge, Arnoldussen and Drenth (2015) could show that Single Grave Period interments were placed along relatively straight alignments (possibly path or roads).

For the Bronze Age, the composition of multiple bronze object hoards such as those from Havelte and Drouwenerveld showed that in the selection of objects deposited, ties between locally produced items and exotic imports were deliberately stressed. Situated at the threshold of the Bronze to Iron Age, the Noorbarge urnfield studied by Arnoldussen and Albers (2015) showed that diachronic re-interpretations of cultural landscapes could occur. In the Middle Iron Age, the age-old urnfield was literally overwritten by Late Iron Age habitation. It suggests that prior funerary use did not preclude later habitation. A more systematic investigation of Iron Age settlement determining factors was undertaken by Wolthuis and Arnoldussen (2015) and revealed that traditional models require refinement and regional contextualisation.

The early Frisian peat reclamations: Leeuwarden-Bullepolder (Bakker, M)

The 2015 campaign shifted its attention to the terp site Leeuwarden-Bullepolder and its direct surroundings. Besides a number of corings and a geomagnetic survey, a medium sized excavation was carried out. During the excavation remains were found of several occupation phases, of which the oldest date back to the Middle-Iron Age (500-250 BC). This makes this site the oldest place known thus far in the Northern-Netherlands where peat lands were reclaimed for agricultural usage.

TL Dating North African oil lamps, a hoard find from the Bourtange peat bog in Groningen. (Groenendijk, H.A., Tol, G., Volkers, T. (Noordelijk Archeologisch Depot)

Four so-called Roman or Early Medieval oil lamps were registered as Bourtange peat bog finds in the 1930's. Verifying their originality was considered important to the understanding of hoard finds in the Bourtange bog area and the spread and dating of African Red Slip Ware. TL dating of one specimen by Kotalla Laboratory, Germany, proved that we deal with a falsification of about 90 years ago.

Note: H. Groenendijk, 2006. Ter leringh: olielampjes uit de Laudermarke (Gr.). *Paleo-aktueel* 17, 142-145.

Lost building traditions (D. Postma)

The year 2015 saw the coming together of all aspects of the research project. Work was finalised on the various research topics that were set out and developed in previous years (i.e. research methodology, turf construction, 3D reconstruction models and sustainability of early medieval architecture). Insights gained during the completion of the Turf House Project (see elsewhere in this report) led to developing an alternative approach for future building experiments. First dissemination of the results was aimed at the general public, taking the shape of a well-illustrated book titled 'Het zodenhuis van Firdgum'. This publication presents the full scientific background of the project and serves as the basis for the final PhD thesis, on which work has now started.

Turf House Project (D. Postma)

As preparations were made for finishing the turf house reconstruction in Firdgum (Fr.), which had been rebuilt and nearly completed in 2014, the applicability of different thatching methods was researched. Practical difficulties however resulted in the construction of a rough 'conventional' reed thatch, but also helped to clearly define new ideas for future building experiments. A proposal for providing such experiments with a practical modern use, rather than 'limiting' their use to the domain of open air museums, was added to the book 'Het zodenhuis van Firdgum' as an epilogue. After thatching was completed the early medieval turf house reconstruction was re-opened to the public on 6 November, following the presentation of the accompanying book.

Note: The project was closely supervised and coordinated by Prof. Dr. G.J. de Langen. Funding for the thatching was acquired through the project 'Terpen- en wierdenland: een verhaal in ontwikkeling'. Museumfederatie Fryslân provided additional support for the Yeb Hettinga Museum in organising activities with regard to the public, in particular the opening and book presentation.

Stone Age society: pattern and process

Human behaviour and computer modelling (Peeters, J.H.M., Romeijn, J.-W. (Dept. of Philosophy, University of Groningen))

As a contribution to a book (to be published in 2016) about uncertainty and sensitivity analysis in archaeological computational modelling, we have explored various aspects of a previously developed model that focused on Mesolithic-Neolithic landscape use and environmental change. The prime concern was to identify strengths and weaknesses of the model from a theoretical and analytical perspective, as a basis for epistemic considerations about uncertainty and model selection in computational archaeology. The outcome of this exercise was that the environmental 'layer' of the model shows a degree of nonlinear dynamics by simply changing the value of a single parameter. However, this did not influence the hunter-gatherer model behaviour (large mammal hunting), due to the a priori defined spatial (nearest neighbour) and environmental interrelationships in connection to a chosen set of behavioural parameters. From this, it also became clear that the grid-based calculation of behaviour-related probability values (a 'helicopter' approach) is less appropriate than an agent-based approach which can more effectively be connected to an environmental model which can exhibit nonlinear dynamical features. It is concluded that, when modelling is used for exploratory purposes, model evaluation by means of robustness analysis and theoretically underpinned selection tools at the front end of model building, seems to offer the best possibilities to identify families of models that can be understood in terms of archaeological output. In a way,

computational models bridge the gap between conceptual models operating in 'ethnographic time' and the compounded nature of the archaeological record. At any rate, posterior evaluation of model output with archaeological data is problematic to test for model performance as a basis for gauging models.

The gain of rescue excavations (Peeters, J.H.M., Raemaekers, D.C.M., Hoebe, P., Devriendt, I. (ArcheoLithics), Niekus, M.J.L.Th. (De Steekproef), Nobles, G., Schepers, M.)

The National Heritage Agency (RCE) has commissioned a project aimed at a scientific synthesis of reports resulting from commercial excavations of early prehistoric (Palaeolithic-Middle Neolithic) sites in the Netherlands over the past 10-20 years. The goal is to establish the scientific gain of excavations conducted in the context of the 'Malta legislation' (effective since 1997) and the national archaeology research agenda (NOaA, 2006). The obtained insights, to be published in 2016, will serve as a basis for a new research agenda, which aims to steer future commercial fieldwork. The first phase of the project involved the development of a database, which links excavation reports (published between 2005 and 2015) to research questions from the NOaA 2006, and which in turn are connected to a broader thematic (Humans & Material; Humans & Space; Humans & Environment) and analytical (spatio-temporal dimensions) framework drawing from GIA research. Through the scoring of key aspects for each report (c.150) the database permits to extract potentially informative reports in connection to the research questions and themes. This may provide a useful basis for an extension of the national archaeology database Archis, maintained by the RCE, and which hitherto does not easily permit research focused queries. The second phase of the project (2016) will involve a critical assessment of the reports from a research perspective, as well as the synthetic analysis relative to a number of selected research topics.

Swifterbant ceramics and the transition to TRB (Raemaekers, D.C.M.)

A re-analysis of the ceramics from the Swifterbant type site S3 (4300-4000 calBC) focused on the spatial patterns of the pottery. It was concluded that the midden site had a vertical stratigraphy that allowed a study on the development of pottery characteristics. It was concluded that in the lower part of the midden tempering, decoration and pottery quality were not correlated; in the upper part there are two clear subsets with few pots with intermediate characteristics. Interestingly, throughout the build-up of the midden pots with grit temper, rim decoration and high quality increased in proportion. Not only do these pots prelude the younger pre-Drouwen TRB pottery, but they also are the ones that were previously identified as pots used for cooking meals with emmer wheat (Raemaekers et al. 2013). It is concluded that in the incorporation of a new food correlated with a change in pottery characteristics: from Swifterbant to TRB (Raemaekers 2015).

Material Culture Studies

Special Issue of Metaaltijden on Production and deposition in the Bronze and Iron Age Netherlands (Arnoldussen, S., Ball, E.A.G. (BAAC bv))

Together with co-editor E.A.G. Ball (BAAC bv), a new issue of the journal 'Metaaltijden' was edited and preceded by an editorial introduction considering the role and potential of processes of production and deposition in Bronze Age and Iron Age in the Netherlands.

Scientific investigation and contextual interpretation of ironworking debris (Arnoldussen, S., Brusgaard, N.O. (Leiden university), Os, B. van (Cultural Heritage Agency (RCE)))

Together with Nathalie O. Brusgaard (Leiden University) and Bertil van Os (RCE), pXRF analysis of iron working debris from Iron Age settlements in the southern and northern Netherlands was undertaken. Remarkably, a pattern of intentional deposition of ironworking debris came to the fore.

Ceramic research; Iron Age - Deventer (A.J.Nijboer, B. Borgers, G.J.M. van Oortmerssen)

A pit with various stages of ceramic production was excavated in Deventer. We were requested to examine these stages macro-, microscopically and chemical. The data were collected and each method confirmed that the pit contained the raw clay, misfired ceramics and fired, completed vessels. We plan to write up an article in 2017 with the excavator and hopefully with Dr. S. Arnoldussen.

Maritime archaeology

Project 'Stock-taking of cultural heritage outside the dikes in the eastern part of the Waddenzee' (Mulder, S.A.)

In 2014 and 2015 S. Mulder worked on the project of stock-taking of cultural heritage outside the dikes in the eastern part of the Waddenzee. For the research five pilot projects were selected: IJsselmeer, Vlietstroom, Ameland, Schiermonnikoog, and the Dollard. In the IJsselmeer existing locations of shipwrecks were checked by sonar and diving (Molkwerum 1 and Workum 2-5) and several other sites. Some new shipwreck locations were detected. In the Vlietstroom several known locations of shipwrecks were checked under difficult circumstances. In the surroundings of Ameland several interesting culture-historical elements were traced, among other the crash sites of several airplanes from WO II. South of Schiermonnikoog several contact locations were checked of shipwrecks and planes. Some shipwrecks were covered by sand and couldn't be traced. Two new crash sites of airplanes were recovered. Research in the Dollard area proved to be very difficult.

Het maritieme cultuurlandschap van Schokland (Popta, Y.T., van)

This project examines the dynamic past of the former island of Schokland. To this end, the concept of the maritime cultural landscape (Westerdahl 1992) is used and adapted by adding a defined chronological and geographical dimension and by considering the concept on four scales. Scale 1 focuses on Schokland as the centre of a larger geographical unit (in this case the Zuiderzee, now IJsselmeer), scale 2 examines the island itself, scale 3 analyses a part of the island in detail (in this case the settlement of Emmeloord) and scale 4 highlights one specific element of the maritime cultural landscape (in this case shipwreck NP 15). The interaction between the different scales and the use of multidisciplinary datasets creates an opportunity to reconstruct and bring to life the past of Schokland.

Archaeological heritage management

Map of archaeological and culture-historical elements in the Dutch river area (Popta, Y.T. van, Arnoldussen, S.)

The Dutch Cultural Heritage Agency commissioned an inventory and analogue and digital atlas for archaeological and culture-historical elements in the Dutch river area.

This dataset - even if published separately - can be used as a more detailed supplement to the Predictive Archaeological Map for the embanked floodplain of Netherlands issued last year.

Van peilschaal tot steenfabriek. Cultuurhistorische Elementkaart Uiterwaarden Rivierengebied. (Popta, Y.T., van, Arnoldussen, S.)

This project has resulted in the making of the Cultural Historical Elements Map of the Floodplains in the river area of the Netherlands (Cultuurhistorische Elementenkaart Uiterwaarden Rivierengebied). The project was initiated by the Cultural Heritage Agency, executed by the University of Groningen, and meant to add more information to the already developed Predictive Archaeological Map of the River area (UIKAV). This new data-set facilitates much better characterization of heritage potential, particularly for the period 1830 – 1960. The digital map contains over 6000 point elements, line elements with a total length of 3500 km and approximately 21.000 polygon elements. All elements provide information on for example type, name, categories (e.g. infrastructure, habitation, defense, religion) date and whether the elements are still present, disturbed or gone.

Other projects

Palaeo-geochemical analysis of lacquer-peels (Arnoldussen, S., Os, B. van (Cultural Heritage Agency))

Lacquer-peel sections have been created by archaeologists and geologist to document phenomena often destroyed by the very act of investigating sites. As such, these panels are frequently the sole preserved 1-to-1 scale data-set of sites now excavated or overbuilt. Using pXRF analysis of such lacquer-peels, pedological and archaeological hypotheses proved to be verifiable (Arnoldussen & Van Os 2015), indicating the suitability of pXRF to extract paleo-geochemical information from soil lacquer peels.

The excavations in Ezinge, 1923-1934 - analysis of the results (Nieuwhof, A.)

The terp of Ezinge was excavated between 1923 and 1934 by prof. A.E. van Giffen. It attracted considerable attention because of the many impressive remains of houses from the pre-Roman and Roman Iron Age that were found there. Ezinge became a type-site in northwest-European archaeology. Yet, the excavation data were never fully analysed and published. In 2011, a grant from NWO made it possible to start with the analysis of the sizable find material. The results of this project have been published in 2014. In that same year, a new project started as part of the Waddenfonds-project 'Terpen- en Wierdenland, een verhaal in ontwikkeling' (= The terp region, a developing story). Using the dates obtained during the study of the find material, this project concentrates on the layout and history of the settlement and on the relationship with the salt marsh landscape that surrounded this terp settlement, prior to medieval embankment. The project is aimed at the first 500 years of this history, starting in the 5th century BC, when the first settlers arrived.

Ritual practice in the terp region (Nieuwhof, A.)

A longterm PhD-research project aimed at the remains of ritual that can be found in the terp region of the northern Netherlands was completed this year. This study aimed at making a contribution to the study of ritual practice in the past by assembling a theoretical framework, which is tailored to the needs of archaeology, and which helps to identify and interpret the remains of rituals from the past. By making use of the well-preserved remains of rituals in terps, the role of ritual practice in the societies of the pre-Roman and Roman Iron Age in this area was examined. It

can be concluded that ritual practice was integrated in every aspect of life. The individual person, the prosperity of the family or household, the ancestors, the family territory and the community, as well as their houses, animals, objects and the rituals that were associated with them, cannot be fully understood in isolation. They form a continuum, in which the different elements may gain or lose importance in the course of time. That implies that the meaning of any of these elements should always be evaluated against the background of this continuum: a picture of life in the past that is as complete as possible.

Op zoek naar kastelen in het Hunzedal. Archeologisch booronderzoek nabij Zuidlaren. (Popta, Y.T., van, Spiekhout, A.G.M.)

This research was part of the Tusschenwater project and combined with the PhD-research of Diana Spiekhout (Department of Landscape History). A large number of corings were carried out in the valley of the Hunze, near the settlement Zuidlaren. Based on historical eyewitness reports, toponyms and aerial photographs, three locations were selected that could contain remains of medieval castles. However, no remains of castles or castle sites were found: all locations were heavily disturbed by either ploughing (Kastelen Akkers) or fluvial erosion (Burgvoort, Sansum). The circular shapes on aerial photographs turned out to be small Pleistocene dunes. Therefore, the most important conclusion is that there is no archaeological proof for presence of medieval castle sites within the research area, although historical sources allege the opposite.

Postal stamps and the representation of prehistory (Raemaekers, D.C.M.)

Since the theme depicted on stamps is negotiated in national commissions, stamps can be studied as a reflection of the societal relevance of these themes. This article focuses on European stamps with a prehistoric theme. It is concluded that stamps with this theme were produced as instruments to create historical icons in the new nation states resulting from the break-up of the Soviet Union and Yugoslavia. The analysis moreover suggests that especially during the 1960's and 1970's prehistory was an important societal factor in Sweden, Denmark and Norway. The final case study is that of megalithic tombs. Whilst these are depicted as part of a set of icons from the province of Drenthe (stressing their status as regional icon) in the Netherlands, they are national icons in many other countries.

Properly put to rest? A multi-angled study into individual and collective burial rites in Northwest Europe c. 1000 BC-500 AD (Roest, K. de)

The aim of this research, that started in September 2015, is to gain insight in the way past societies variously handled their dead. It focuses on the reasons behind (shifts in) behaviour in later prehistory (c. 1000 BC – 500 AD). In this research identity and social roles are studied through graves, human remains, cognitive and historical approaches. Central to this study is the (extended) Dutch coastal region. Currently a database of funerary remains and archaeological sites is under development and the theoretical and methodological aspects are being studied.

Terp research Schettens-Sotturum (Varwijk, T.W.)

From August 10 until September 22 the dug-away terp at Sotterum near Schettens (Fryslân) was excavated. Despite plenty of rainfall a good insight was gained in the settlement development. Habitation presumably started around 200 BC and although the settlement was still relatively small in the Roman Period numerous Roman coins were found. During different stages in the middle ages the area was flooded, but eventually a (predecessor of a) stins (or stonehouse) was built. Curiously the terp

grew largest during the late middle ages, when living on a terp was not necessary anymore as a result of the built dikes.

Settling with the norm. Norm and variation in the definition of social groups and their material manifestations in (Roman) Iron Age settlement sites of the northern Netherlands. (Vries, K.M. de)

The PhD project started in September 2015 as a result of funding by the Dutch National Research School of Archaeology (ARCHON). The project aims to understand the process of village formation on the Fries-Drents plateau during later prehistory and the effects of this process in the expression of (group) identity through the use of material culture (e.g. houses, ceramics) and social practices (e.g. foundation or abandonment depositions). In the initial stage of the project an overview was made of relevant sociological and archaeological literature regarding the process of group formation and identity expression. Besides this, an inventory was made of relevant excavations (both BAI/GIA excavations and development-led excavations) to be included in the project at a later stage.

Zooarchaeology

Adaptation, identity, and innovation in Neolithic and Chalcolithic Western Anatolia (6800–3000 cal. BC) (Çakırlar, C.)

In this research, information from twenty-eight archaeomalacological assemblages from Neolithic and Chalcolithic western Turkey was used to address current debates in the prehistory of the region, especially the persistence of wild plant and animal exploitation among farmers. Thirteen assemblages from seven sites are presented for the first time. The research elucidated importing issues in terms of the life styles, cultural affinities, farming communities' relationship with and approach to non-domestic organic resources in the 'wild', and innovation in Neolithic and Chalcolithic Western Turkey.

Note: <http://www.sciencedirect.com/science/article/pii/S1040618215004942>

The genetic prehistory of domesticated cattle from their origin to the spread across Europe (Scheu, A. (University of Mainz), Powell, A. (University of Mainz), Bollongino, R. (University of Mainz), Vigne, J.-D. (Natural History Museum, Paris), Tresset, A. (Natural History Museum, Paris), Çakırlar, C., Benecke, N. (German Archaeological Institute, Berlin), Burger, J. (University of Mainz))

In this study, mitochondrial DNA from 193 ancient and 597 modern domesticated cattle (*Bos taurus*) from sites across Europe, Western Anatolia and Iran were analysed to provide insight into the Neolithic dispersal process and the role of the local European aurochs population during cattle domestication. Using descriptive summary statistics and serial coalescent simulations paired with approximate Bayesian computation we find: (i) decreasing genetic diversity in a southeast to northwest direction, (ii) strong correlation of genetic and geographical distances, (iii) an estimated effective size of the Near Eastern female founder population of 81, (iv) that the expansion of cattle from the Near East and Anatolia into Europe does not appear to constitute a significant bottleneck, and that (v) there is evidence for gene-flow between the Near Eastern/Anatolian and European cattle populations in the early phases of the European Neolithic, but that it is restricted after 5,000 BCE. The most plausible scenario to explain these results is a single and regionally restricted domestication process of cattle in the Near East with subsequent migration into Europe during the Neolithic transition without significant maternal interbreeding with the endogenous wild stock. Evidence for gene-flow between cattle populations

from Southwestern Asia and Europe during the earlier phases of the European Neolithic points towards intercontinental trade connections between Neolithic farmers.

Note: <http://bmcgenet.biomedcentral.com/articles/10.1186/s12863-015-0203-2>

Beginnings of the Neolithic in Southeast Europe: the Early Neolithic sequence and absolute dates from Džuljunica-Smārdeš (Bulgaria) (Krauss, R. (Tuebingen University), Weninger, B (University of Cologne), Çakırlar, C, Zidarov, P (New Bulgaria University))

Investigations of a balk in the centre of the prehistoric settlement of Džuljunica-Smārdeš comprised a sequence of archaeological deposits from the very onset of Neolithisation in South-eastern Europe throughout the end of the Early Neolithic. The arrival of Neolithic lifeways in the region coincides with the end of a period for which palaeoclimate proxies attest to considerable climate fluctuation.

Archaeozoological finds suggest that domesticated pigs were not part of the Neolithic package that arrived the eastern Donau.

Cooperation : C. Damm (University of Tromso) M. Skandfer (University of Tromso).

Classical and Mediterranean Archaeology

Crustumerium (Italy), 13 July — 2 August . Conservation and restoration of finds from the excavation of tombs at the MDB cemetery.

Director : P.A.J. Attema
Staff : P.A.J. Attema, A.J. Nijboer, S.L. Willemsen, J. Seubers, S. Boersma
Participants : C. Barreaud R. Bronkhorst B. Danhof N. Noorda J. Hilbrants R. Brandhof A. Wijnstok Y. v. Popta J. v d Weg M. Catsman P. Kalkman S. Manuel F. Koolstra R. Scharff I. Alpay L. Weekers T. Kauling
Cooperation : --
Note : C. Barreaud participated as intern while in the master phase of her study at the l'Ecole de Conde, Paris (education intitute for ceramics restoration).

Sai Island, 2 — 21 January. Archaeobotanical investigations at the Pharaonic City and Ottoman Fortress at Sai Island.

Director : J. Budka
Staff : F.B.J. Heinrich (Senior Archaeobotanist), J. van der Heul (Assistant)
Participants : F.B.J. Heinrich (Senior Archaeobotanist) J. van der Heul (Assistant)
Cooperation : -
Note : Research conducted as external expert for the ERC project Across Borders, Julia Budka, Austrian Academy of Sciences.

Sermoneta, 18 — 31 January. Processing of archaeological materials collected during previous fieldwork (Fall 2014) of the Minor Centres-project.

Director : G.W. Tol
Staff : -
Participants : F. Verhagen, E. Witmer, K. de Roest, T. Trienen(University of Groningen), L. Theelen (Leiden University).
Cooperation : C. Anastasia (local liaison)

Grotta la Sassa (Sonnino, Italy), 15 — 24 July. Survey and preliminary works at La Sassa cave. A Bronze age deposit with human bones.

Director : L. Alessandri
Staff : L. Alessandri
Participants : M. F. Rolfo, I. Fusco, A. Cesaretti, A. Strazzeri, E. Fazi, O. Higgins, A.

Ferracci, R. Malinconico (University of Rome Tor Vergata, students)
Cooperation : University of Rome Tor Vergata

Crustumerium, 5 — 17 July. Material studies of settlement ceramics, ca. 800 BC.

Director : P.A.J. Attema
Staff : A.J. Nijboer
Participants : See report Attema on 2015 Crustumerium campaign
Cooperation : Dr. B. Belelli Marchesini (independent researcher/SSBAR) For others see report Attema on 2015 Crustumerium campaign.
Note : See report Attema on the Crustumerium campaign. I instructed 2nd-year student on material studies. We worked on a context excavated by the SSBAR, dated around 800 BC.

Sermoneta, 5 — 23 July. July. Coring around Forum Appii, processing and specialist studies of archaeological materials collected during previous fieldwork campaigns of the Minor Centres-project.

Director : G. W. Tol & T.C.A. de Haas
Staff : B. Borgers
Participants : F. Verhagen, E. Witmer (University of Groningen), M Mandich (University of Leicester)
Cooperation : J. Sevink (University of Amsterdam) L. Orlandi (independent researcher), P. Calabria (La Sapienza University of Rome), A. Ferrandes (La Sapienza University of Rome), M. Revello Lami (University of Amsterdam), M. Termeer (Leiden University) C. Anastasia (local liaison)

Ciampino (Roma), 1 October — 31 January 2016. Laboratory activities on ceramics.

Director : A. Betori (SALEM)
Staff : A.L.Fischetti
Participants : F. Verhagen, M.v. Vliet (GIA) S. Polvere, L. Mazzoni, C. Baranello (Sapienza University)
Cooperation : J. Pelgrom (KNIR)

Greek Archaeology

Greece, 23 March — 1 April. Workshop "Death in the Greek World".

Director : S.Voutsaki
Staff : T.Dijkstra, E.Panagiotopoulou
Participants : K. de Roest, C. van Toor, L. ter Hart, J. van der Velden, F. Koolstra, A. Kers, M. Louwes, A. Kroop, Th. E. Lysen, L. Kirchner, L. Smit, C. Tetterroo
Cooperation : W. van de Put (Netherlands Institute of Athens) E. Mestropian-Makri (Netherlands Institute of Athens)

Durham university, 29 April — 30 May. Strontium Isotope Analysis of archaeological human enamel.

Director : S.Voutsaki
Staff : E. Panagiotopoulou
Participants : E.Panagiotopoulou
Cooperation : J.Montgomery (Durham University), G.Nowell (Durham University)

Ayios Vasilios North Cemetery Project, 1 July — 16 June. Excavation of early Mycenaean cemetery.

Director : S. Voutsaki
Staff : Dr E. Vika (Attica Ephorate), Dr I. Moutafi (Wiener Laboratory), G. Nobles (Groningen Institute of Archaeology), V. Hachtmann (University of Heidelberg), D. Fallu (University of Boston)
Participants : T. Verlaan, I. Rom, F. Koolstra, J. Roring (students)
Cooperation : Dr T. Karkanas (Wiener Laboratory)
Note : 2015 Was planned to be the last campaign of the North Cemetery excavation. The excavation lasted from 1 to 16 July 2015. The campaign had three aims:
- To complete the exploration of the cemetery boundaries to the east, west and south, and to understand the spatial extent of the cemetery.
- To investigate further certain special features such as: the pottery deposits of different phases at the edges of the cemetery; the mudbrick 'oven' (?) found near the built tomb 21; the stone layers and walls to the south of the cemetery, at a point of access from the settlement; the wall which stretches from east to west at the southwestern edge of the cemetery. The purpose of all these investigations is to understand the earlier use and later history of the area of the cemetery. Specific problems were discussed again with the soil micromorphology specialists.
- To complete the excavation of all the tombs revealed so far. Burial 11, graves 13 and 14 were fully revealed and excavated. All the burials (ca. 30 individuals) of the large built tomb 21 were removed. However, the excavation was not completed, because assembled remains were revealed just outside the (pseudo?) entrance of the tomb. Another brief excavation campaign is therefore necessary. This year we also used photogrammetry in order to make a 3-D model of the entire site, to be used for the spatial analysis of the ceramic material.
The study and conservation of the pottery and small finds, kept in the Sparta Museum, continued. The study of the human remains, which have been transported to the Wiener Laboratory, is also making good progress.

Halos (Thessaly, Greece), 26 July — 13 August. Study of excavated material of the 2013-2014 excavations at Magoúla Plataniótiki, Thessaly, Greece.

Director : H.R. Reinders, V.V. Stissi
Staff : T.M. Dijkstra
Participants : J. van der Heul, S. Kamphorst
Cooperation : V.V. Stissi (UvA) V. Rondiri (Ephorate of Antiquities of Magnisia)
Note : In the summer of 2015 a small team of the University of Groningen

worked on the cleaning and documentation of the finds of the 2013-2014 campaigns, with a focus on the architectural terracottas. A study of the inscriptions excavated in earlier campaigns was undertaken in preparation of their publication.

Ayios Vasilios Survey Project, 15 October — 4 November. Pilot field-walking survey.

Director : S. Voutsaki and A. Vasilogamvrou

Staff : C. Wiersma

Participants : R. Lenting, J. Pannen, Y. van de Raaff, N. Le Voguer, R. Scharff, M. Mina, R. Bodegom, T. Verlaan, C. Vergidou. R. Brandhoff, P. Zwart. Volunteers.

Cooperation : -

Note : The Ayios Vasilios Survey Project, which has started this year, is co-directed by Prof. Sofia Voutsaki, Groningen Institute of Archaeology and Mrs Adamantia Vasilogamvrou, Director Emerita of Laconia Directorate. It consists of different components: a field-walking survey (Field Director: Dr Corien Wiersma, Groningen Institute of Archaeology), geophysical prospection, trial trenches and an ethnographic survey. The project is part of the Ayios Vasilios project, takes place under the auspices of the Archaeological Society at Athens, and is supervised by the Laconia Directorate of Antiquities. In the first year, the work was restricted to a pilot field-walking campaign which was carried out in between October 15 and November 4. The pilot campaign was funded by the Institute of Aegean Prehistory, The Michael Ventris Memorial Award, the Curtiss T. & Mary G. Brennan Foundation, and the Groningen Institute of Archaeology. Seventeen students participated in the project, most of them from Groningen, including two Erasmus exchange students. Two volunteers also joined the project. The main aim of the pilot survey was to test the spatial coverage of different survey and collection methods, to try out the fieldwork forms used in the field and during processing find and to set up the database of the field survey data. The total areas surveyed was 4,3 ha, while an area of 1,5 ha in size was omitted due to depositional circumstances. Different sampling techniques (e.g. various grid sizes, total sampling, diagnostic sampling) have been tried. The finds are currently under study by Dr Wiersma.

Ayios Vasilios, 15 October — 4 November. Ayios Vasilios Public Archaeology Programme.

Director : A. Vasilogamvrou S. Voutsaki

Staff : C. Wiersma

Participants : -

Cooperation : -

Note : A public lecture for the inhabitants of the neighbouring villages was given in order to announce the begin of the field-walking survey. During the survey, the team received a visit by the kids of the local primary school who learnt how to collect surface finds, and received basic instructions about describing and dating them. More

educational activities are planned in the future as the survey (unlike the excavation) takes place at a time the schools are open. S. Voutsaki wrote an article about the North Cemetery excavation in the 2015 issue of the local periodical Pharis.

Ayios Vasilios, Laconia, Greece, 15 October — 4 November. Survey of the Mycenaean settlement Ayios Vasilios.

Director : S. Voutsaki ; A. Vasilogamvrou
Staff : C.W. Wiersma
Participants : S. Lenting, R.Scharff, J. Pannen, P. Swart, Y. van den Beld, R. Brandhof, S. Verhagen, R. van Bodegom, N. le Voguer, M. Mina, C. Vergidou, Y. de Raaff, C. Spencer, T. Verlaan, T. Fischer Luck, S. Lardis, A. Solomou
Cooperation : The survey forms part of the Ayios Vasilios Project. This consists of externally funded excavations carried out under the auspices of the Archaïologiki Etaireia and a public outreach programme financed by the local authorities and a fund-raising campaign. The project is supervised by the Laconia Directorate of Antiquities. The survey is co-directed by the directors of the palace and cemetery excavations, Mrs Adamantia Vasilogamvrou, Director Emerita of Laconia Directorate, and Prof. Sofia Voutsaki, Groningen Institute of Archaeology.

Prehistoric and Protohistoric Archaeology of North-west Europe

Onlanden, 1 January — 31 December. Conservation and restoration of finds from the excavation.

Director : J.A.W. Nicolay
Staff : --
Participants : M. Meddeler, as intern from the University of Amsterdam, Research Master, discipline Conservation and Restoration, specialisation Ancient and Historic Metals
Cooperation : --
Note : --.

Dronrijp, 1 January — 31 December. Conservation and restoration of finds from the excavation.

Director : M. Bakker
Staff : --
Participants : --
Cooperation : --
Note : --.

Deventer, 1 January — 31 December. Deventer, external project on ceramics analysis.

Director : --
Staff : --
Participants : A.J. Nijboer B. Borgers

Cooperation : S. Bloo (BAAC)
Note : Fabric analysis on ceramics from Deventer: fresh sections, thin sections.

Wommels Stapert, 1 November — 31 December. Conservation and restoration of finds from the excavation.

Director : T. Varwijk
Staff : --
Participants : --
Cooperation : --
Note : --.

Leeuwarden, 20 — 21 April. Coring survey at and near the terp site Leeuwarden-Bullepolder.

Director : M. Bakker
Staff : -
Participants : J.G. Top (student)
Cooperation : G. Aalbersberg (AGEA advies)
Note : Corings were carried out on the terp site and a parcel with a silted up gully north of the terp site.

Westeinde - Noormansveld, 15 May — 15 June. Fieldschool and research excavation of Celtic fields and cinerary barrows near Westeinde.

Director : S. Arnoldussen
Staff : R. Rap, N. de Vries
Participants : First year archaeology students of Groningen University
Cooperation : W. van der Sanden (Provincial Archaeologist Drenthe) M. Nieuwenhuis (municipality of Westeinde) R. Popken (landowner; Stichting Natuurmonumenten)

Leeuwarden, 1 June — 4 July. Excavation of the terp site Leeuwarden-Bullepolder (GIA 140).

Director : M. Bakker
Staff : T.W. Varwijk,, J.A.W. Nicolay,, S. Tiebackx,, M. Schepers,
Participants : P. Schrijver (volunteer archaeologist), J.G. Top, S. Filatova, A. Kaspers, M. Scholte-Lubberink, T. Sibma, L.A. van Sambeek (students), A. Hiemstra (exchange student UvA), K. Nielsen (exchange student Denmark), R. Visser, H. Baron, A. Visser (AWF colunteers), N. Casolin (ASP-Sneek volunteer), W. Prummel, S. Thasing, R. Koster, M. Straatman, J. de Boer, S. Bakker, M. Lutgendorff, J. Klip, A. Bakker, N. van Coehoorn (volunteers)
Cooperation : G. van Aalbersberg (AGEA advies), P.C. Vos (Deltares), S.J. van der Burg (Van der Wiel BV)
Note : A levelled terp site, located in the Bullepolder north of Leeuwarden, was for a part excavated by digging several trenches.

Jonkersvaart, 3 — 4 June. Test excavation on the find spot of an Early Medieval silver hoard.

Director : H.A. Groenendijk
Staff : C. Tulp, De Steekproef
Participants : M. van den Bosch, finder W. Melissen, land owner
Cooperation : P. Soet, gemeente Marum (Gr)
Note : As hoards generally suffer from a poor description of the find context, a recent discovery of 'Viking' coin ornaments and a Roman coin in a former peat bog, was followed by a test excavation. The hoard character was confirmed.

Leeuwarden, 22 — 24 June. Geomagnetic survey north of the terp site Leeuwarden-Bullepolder.

Director : M. Bakker
Staff : -
Participants : M. Straatman (volunteer), A. Hiemstra (exchange student UvA)
Cooperation : M. Müller (Niedersächsisches Institut für historische Küstenforschung)
Note : A geomagnetic survey was carried out on a parcel with a silted up gully. The parcel is located directly north of the terp site Leeuwarden-Bullepolder.

Dronten, 22 June — 31 July. Excavation of 17th century shipwreck OR 49.

Director : A.F.L. van Holk
Staff : A.F.L. van Holk, Y.T. van Popta
Participants : A. Brinksma, L. Kieskamp, K. Kleine Koerkamp, A. Postma, M. van Rijn, E. Zwijnenburg, M. Haandrikman, K. Blok, G. Dijkstra (students University of Groningen), W.J. van Beest, D. Otten, M. Spithoven, M. de Vos, A. Bulder (students University of Leiden), A. Cattrysse (student University of Southern Denmark), W. Huffstadt (student Saxion Deventer), A. Hajdu (student Hungary)
Cooperation : L. Koehler (RCE) G. Schreurs (RCE) F. Dallmeijer (RCE)

Dronten, lot OR 49, 22 June — 31 August. Excavation of 17th century shipwreck (second campaign) site OR 49.

Director : A.F.L. van Holk
Staff : F. Dallmeijer, L. Koehler, Y. van Popta, G. Schreurs, M. de Vos
Participants : A. Brinksma, L. Kieskamp, K. Kleine Koerkamp, A. Postma, M. van Rijn, E. Zwijnenburg, M. Haandrikman, K. Blok, L. Derksen, W. van Beest, A. Bulder, A. Cattrysse G. Dijkstra, A. Hajdu, W. Huffstadt, B. Hughes-McLaughlin, R. McLaughlin, D. Otten, S. Rijlaarsdam, M. Spithoven
Cooperation : F. Dallmeijer (RCE) L. Koehler (RCE) G. Schreurs (RCE) M. de Vos (RCE)

Warten, 9 — 10 June. Geomagnetic survey south of the village of Warten (Fr.).

Director : M. Bakker
Staff : -
Participants : J.G. Top, S. Filatova (student)
Cooperation : M. Müller (Niedersächsisches Institut für historische Küstenforschung)
Note : A geomagnetic survey was carried out on a couple of parcels south of the village of Warten. Goal was to find remains of old silted up ditches and possible other features which might be related tot the silted up terp sites in this area.

Schettens-Sotterum, 10 August — 22 September. Excavation of a dug-away terp at Schettens-Sotterum.

Director : T.W. Varwijk
Staff : M. Bakker, J.A.W. Nicolay, S. Tiebackx, T.W. Varwijk, G.J. de Langen, M. Schepers, S. Boersma, M. Los-Weijns, E. Bolhuis
Participants : A. Kaspers, M. Scholte-Lubberink, H. Kamstra, P. Schrijver, J. van Dijk, A. Hiemstra, Y. Csonka, K. Witteveen, J.G. Top, N. de Boer, T. Sibma, C. Assië, P. Kalkman (students), S. Thasing, N. Casolin, G. Hofstra, R. Visser, H. Baron, A. Visser, G. Aalbersberg, Ji. de Boer, Ja. de Boer, M. Straatman, R. Kusters, M. Lutgendorff (volunteers)
Cooperation : S. van den Burg (Van der Wiel Holding BV), P. Vos (Deltares)

Firdgum, 31 August — 18 September. Turf House Project 2.0: thatching, monitoring and photogrammetric recording of the archaeological reconstruction of an early medieval turf-walled farm building.

Director : D. Postma
Staff : G. de Langen, F. Possel, E. Bolhuis, S. Tiebackx, M. Los-Weijns, J. Seubers
Participants : J. van Gent (formerly Groningen Institute of Archaeology)
Cooperation : S. Batema (Batema & Zn Rietdekkersbedrijf)
Note : Funding for the thatching was aquired through the project 'Terpen-en wierdenland: een verhaal in ontwikkeling'.

Zooarchaeology

Karaburun, 15 August — 15 September. Survey of the Karaburun Peninsula.

Director : C. Cilingiroglu
Staff : C. Cakirlar
Participants : C. Cakirlar C. Cilingiroglu E. Koparal
Cooperation : C. Cilingiroglu (Ege University, Izmir) E. Koparal (Hitit University, Corum)

Archaeobotany

Star Carr, 8 — 12 June. Excavation of world famous prehistoric hunter-gatherer site.

Director : Prof. Nicky Milner, Dr Chantal Conneller, Dr. Barry Taylor
Staff : N/A

Participants : Participants from universities in the UK, Ireland, Germany and The Netherlands

Cooperation : Universities of York, Manchester and Chester

Terugblik op de SEES expeditie. Pomoren op Edgeøya

Sarah Dresscher (Speaker)

De deelname aan de SEES expeditie gaf ons archeologen de mogelijkheid om Edgeøya, een afgelegen gebied, te bezoeken. Edgeøya is in 18e en 19e eeuw door Russische jagers bezocht. De Russische jagers kwamen uit het gebied rondom de Witte Zee in Rusland en werden Pomoren genoemd. Zij kwamen onder andere naar Edgeøya om op walrussen en poolvossen te jagen. Tijdens de SEES expeditie konden wij enkele van hun jachtstations bezoeken en er zelfs veldwerk uitvoeren. Tijdens de Imaka lezing zal worden ingegaan op de herkomst van de Pomoren, hun expedities naar Spitsbergen en het veldwerk dat is uitgevoerd door Frigga Kruse, Marthe Koeweiden en Sarah Dresscher tijdens de SEES-expeditie.

Event: Imaka

Open day for the public to visit the excavation of a dwelling mound north of Leeuwarden. Guided tours were provided by me, drs. T.W. Varwijk and ing. J.G. Top. The number of visitors are estimated to have been between 500 to 600.

Event: Open day: excavation Leeuwarden-Bullepolder

Date: 27-Jun-2015

Lecture: De terpen – het opgeslagen verleden van Friesland

Marco Bakker (Presenter)

As part of a serie of lectures of the 'Museum Universiteit', a lecture was given about the northern Dutch terp sites their origin, their history and why they are so important. The 'Museum Universiteit' is a cooperation between Tresoar, the Fries Museum and University Campus Fryslân (UCF).

External organisation: Tresoar, Fries historisch en letterkundig centrum

Date: 22-Mar-2015

Archeologisch onderzoek in Fryslân

Marco Bakker (Speaker)

For the members of the 'Archeologysk Wurkferbân' (AWF) two presentations were given. One by T.W. Varwijk about archaeological 'terpzool' research and one by me about the archaeology of the early peat reclamations.

Event: Archeologisch onderzoek in Fryslân door het Groninger Instituut voor Archeologie (GIA) door Marco Bakker en Theun Varwijk

Date: 6-Oct-2015

Experimental Archaeology: what does this contribute to our knowledge of the past?

Daniël Postma (Speaker)

Invited speaker for a public seminar and discussion regarding the contribution of experimental archaeology to our knowledge of the past. A lecture was presented on the results of my PhD research on lost building traditions in the north of the Netherlands and the experimental reconstruction of an early medieval turf house as part of this research. The event was organised and hosted by the Cultural Heritage Agency of the Netherlands (RCE).
