**General:** $^1$H-NMR spectra were recorded at 300 or 400 MHz with CDCl$_3$ as solvent. Progress and conversion of the reactions was determined by GC-MS equipped with an HP1 column.

**Materials:** Riboflavin, acetaldehyde, palladium (10%) on activated carbon, H$_2$NNH$_2$·H$_2$O, methyl-p-tolylsulfide, 1-decene, 1,6-heptadien-4-ol, norbornylene, cis-cyclooctene, 1-(1-ethynyl)-1-cyclohexene, styrene, 4-allyl-2-methoxyphenol (eugenol), 2-vinylpyridine, allyl phenyl sulfide, trans-stilbene, 3,7-dimethyl-6-octadien-3-ol (linalool), geraniol, (+)- and (–)-limonene, 10-undecen-1-ol and chlorotrityl chloride polymer resin were commercially available and used without further purification. (–)-(((S)-2-methylbut-3-enyloxy)methyl)benzene (18a) was generously donated by A.W. van Zijl.$^1$ benzyl diallylcarbamate was prepared according to a literature procedure.$^2$

The products decane, propyl phenyl sulfide and dihydrolinalool have been previously described (see appropriate references in the following pages) following a similar reaction procedure. The hydrogenation of the olefins was followed by GC-MS, conversion was calculated based on disappearance of the signal of the substrate and appearance of a signal corresponding to the product(s). Both the GC-MS library and observed mass were used to confirm the identity of the products. The volatile products 4-heptanol, norbornane, and cyclooctene were not isolated. The products 1-ethyl cyclohexene, 2-methoxy-4-propylphenol, 2-ethylpyridine, citronellol, 3,7-dimethyl-1-hydroxy-2-octene, 3,7-dimethyl-1-octanol, N-(benzyloxycarbonyl)dipropylamine, (+) and (–)-1-ethyl-4-isopropylcyclohexene and 1-undecanol afforded $^1$H NMR spectra identical to literature.

**Note:** GC-MS analysis was carried out on samples passed through a short plug of MgSO$_4$ to remove hydrazine, diimide and water.
Typical Procedure for the hydrogenation of an olefin with 20 equiv of hydrazine monohydrate and 5 mol% of flavin catalyst 1a.

A mixture of olefin (0.5 mmol), flavin catalyst 1a (10.0 mg, 0.025 mmol), and NH$_2$NH$_2$·H$_2$O (0.5 g, 11 mmol) in ethanol (4.0 mL) was stirred vigorously at 25 °C under air. Samples of 200 µL were eluted with ethanol over a short MgSO$_4$ column and subjected to GC-MS analysis.

4-heptanol (5b): conversion and purity (>95%) based on GC-MS analysis after 4 h. No side products were observed.

cyclooctane (3b): conversion and purity (>95%) based on GC-MS analysis after 4 h. No side products were observed.

1-ethylcyclohexene(7b): conversion and purity (>95%) based on GC-MS analysis after 4 h. No side products were observed.

Ethylbenzene (8b): conversion and purity (>95%) based on GC-MS analysis after 4 h. No side products were observed.

n-Butylbenzene (9b): Purification by extraction with 4x 5 ml pentane followed by washing of the organic layer with brine and evaporation of the solvent afforded a yellow oil. (99% yield)

1H-NMR δ 7.05-7.35 (m, 5H), 5.5 (t, 2H), 1.05-1.80 (m, 4H), 0.9 (t, 3H). >95% (GC-MS).

2-methoxy-4-propylphenol (10b): Purification by extraction with 4x 5 ml pentane followed by washing the organic layer with brine and evaporation of the solvent afforded a yellow oil. [78% yield] 1H-NMR δ 6.83 (m, 1H), 6.67 (m, 2H), 2.57 (t, J = 7.6 Hz, 2H), 1.61 (m, 2H), 0.92 (m, 3H); 13C-NMR δ 146.5 (C), 143.8 (C), 134.9 (C), 121.2 (CH), 114.3 (CH), 111.3 (C), 56.1 (CH$_3$), 38.0 (CH$_2$), 25.1 (CH$_2$), 14.0 (CH$_3$). >95% (GC-MS). HRMS calcd for C$_{10}$H$_{15}$O$_2$ 167.1066, found 167.1069

2-ethylpyridine(11b): Purification by extraction with 4x 5 ml pentane followed by washing the organic layer with brine and evaporation of the solvent afforded a yellow oil. [73% yield] 1H-NMR δ 8.52 (d, J = 4.8 Hz, 1H), 7.59 (m, 1H), 7.16 (d, J = 4.8 Hz, 1H), 7.09 (m, 1H), 2.83 (q, J = 7.6 Hz, 2H), 1.31 (m, 3H); 13C-NMR δ 165.3 (C), 149.4 (CH), 136.6 (CH), 122.2 (CH), 121.1 (CH), 31.6 (CH$_3$), 14.1 (CH$_3$). >95% (GC-MS). HRMS calcd for C$_7$H$_{10}$N 108.0807, found 108.0817

propyl phenyl sulfide(12b): Purification by extraction with 4x 5 ml pentane followed by washing the organic layer with brine and evaporation of the solvent afforded a yellow oil (99 % yield, >95% (GC-MS)).

Citronellol (15b) /3,7-dimethyl-1-hydroxy-2-octene (15c): Conversion based on GC-MS data. Except for the expected 3,7-dimethyl-1-hydroxy-2-octene, no other products were observed.

3,7-dimethyl-1-octanol (15d): Conversion based on GC-MS data. Except for the expected 3,7-dimethyl-1-octanol, no other products were observed.

Benzenepropanoic acid, β-methyl-, ethyl ester (16b): Conversion based on GC-MS data.

N-(Benzylxycarbonyl)dipropylamine (17b): Purification by extraction with 4x 5 ml ethyl acetate followed by washing the organic layer with brine and evaporation of the solvent afforded a yellow oil. (90% yield) 1H-NMR δ 7.30 (m, 5H), 5.11 (s, 2H), 3.18 (br s, 4H), 1.54 (br s, 4H), 0.85 (br, 6H); 13C-NMR δ 137.6 (C), 128.9 (CH), 128.2 (CH), 128.1 (CH), 110.3 (CO), 67.2 (CH$_3$), 49.7 (CH$_2$), 49.1 (CH$_2$), 22.3 (CH$_2$), 21.8 (CH$_3$), 11.7 (CH$_3$). HRMS calcd for C$_{16}$H$_{25}$NO$_2$ 236.1666, found 236.1645.

(-)-(+(S)-2-methylbut-3-enyloxy)methylbenzene (18b): Starting from (+)-(+(S)-2-methylbut-3-enyloxy)methylbenzene (18a) with an ee of 92%. Purification by extraction with 4x 5 ml pentane followed by washing the organic layer with brine and evaporation of the solvent afforded a yellow oil. (99% yield):
H-NMR δ 7.34 (d, J = 4.5 Hz, 4H), 7.32-7.23 (m, 1H), 4.53 (s, 2H), 3.36 (m, 1H), 3.28 (m, 1H), 1.72 (m, 1H), 1.51 (m, 1H), 1.18 (m, 1H), 0.94 (m, 6H); 13C-NMR δ 139.1 (C), 128.5 (CH), 127.7 (CH), 127.6 (CH), 76.0 (CH$_2$), 73.2 (CH$_2$), 35.3 (CH), 26.5 (CH$_2$), 16.9 (CH$_3$), 11.6 (CH$_3$); HRMS [M+ NH$_4$+] caleld for C$_{12}$H$_{19}$O$_6$196.1701, found 196.1695. Enantioselectivity was determined by chiral HPLC analysis, Chiralcel OD-H (99.75% heptane/ 0.25% i-PrOH), 40 ºC, retention times (min): 9.7 (major) and 9.9 (minor).

Racemic ((2-methylbutoxy)methyl)benzene (17c): was obtained by reduction of racemic ((2-methylbut-3-enyloxy)methyl)benzene following the same procedure as for 17b. Purification by extraction with 4x 5 ml pentane followed by washing of the organic layer with brine and evaporation of the solvent afforded a yellow oil. (99% yield)

(+)-1-ethyl-4-isopropylcyclohexene (19b)\(^1\): starting from (+)-limonene with an ee of 87%. Purification by extraction with 4x 5 ml pentane followed by washing the organic layer with brine and evaporation of the solvent afforded a yellow oil. (72% yield, 90% ee) H-NMR δ 5.32 (s, 1H), 4.79-1.08 (m, 8H), 1.64 (s, 3H), 0.99-0.72 (m, 6H); 13C-NMR δ 133.6 (C), 120.7 (CH), 39.7 (CH), 32.0 (CH), 30.5 (CH$_2$), 28.6 (CH$_2$), 26.2 (CH), 23.1 (CH$_3$), 19.7 (CH$_3$), 19.4 (CH$_3$); The ee was determined using GC with a Chiraldex B-PM column, 50 ºC for 5 min followed by heating to 150 ºC in 10 min. After 15 min at 150 ºC cooling to 50 ºC in 15 min.

(-)-1-ethyl-4-isopropylcyclohexene (20b)\(^1\): starting from (–)-limonene with an ee of 99+%. Purification by extraction with 4x 5 ml pentane followed by washing the organic layer with brine and evaporation of the solvent afforded a yellow oil. (89% yield, 99+% ee).

10-undecen-1-ol coupled to 2-chlorotrityl chloride polymer resin. To 0.5 gram of 2-chlorotrityl chloride polymer resin (0.5-0.7 mmol Cl per gram) in 5 ml dry THF was added 119 mg undecenol (0.7 mmol) and 110 mg pyridine (1.4 mmol). The mixture was shaken for 6 hours at 60 ºC after which the resin was filtered and washed 3 times with DCM/MeOH/DIEA (17/2/1), 3 times with DCM, 3 times with DMF and 3 times with methanol. After drying in vacuum over KOH, 450 mg of product was obtained.

Cleavage of 10-undecen-1-ol from 2-chlorotrityl chloride polymer resin
To 150 mg of resin was added 3 ml CDCl$_3$ and 0.01 ml TFA. The mixture was shaken for two hours. The resin was filtered and the yield of the product was determined by 1H NMR by addition of 10 µL TMS (72.5 µmol) as internal standard. 90% yield, >95% (GC-MS), no remaining undecenol was observed.

Reduction of 10-undecen-1-ol coupled to 2-chlorotrityl chloride polymer resin. To 500 mg of resin was added 3.5 ml EtOH, 0.5 ml hydrazine hydrate, and 10 mg 5-ethyl-riboflavin catalyst 1a. The reaction vessel was shaken for 24 hours under an O$_2$ atmosphere (balloon). Afterwards, the resin was filtered and washed 3 times with dichloromethane and three times with MeOH.

Cleavage of 10-undecanol from 2-chlorotrityl chloride polymer resin
To 150 mg of resin was added 3 ml CDCl$_3$ and 0.01 ml TFA. The mixture was shaken for two hours. The resin was filtered and the yield of the product was determined by 1H NMR by addition of 10 µL TMS (72.5 µmol) as internal standard. 90% yield, >95% (GC-MS), no remaining undecanol was observed.

Oxidation of 4-methylphenylmethyl sulfoxide (2a) with flavin catalyst 1a
In a NMR tube with 600 µL methanol-d$_4$ was added 1.58 mg 1a (4 µmol) and 30 µL methyl-p-tolyl sulfide (2.2 mmol). 40 µL H$_2$O$_2$ (30% in H$_2$O, 3.5 mmol) was added and the reaction was followed in time using 1H-NMR\(^1\) (See Figure 1)
**Figure 1:** Conversion of 4-methylphenyl methyl sulfide into 4-methylphenyl methyl sulfoxide
UV spectra of 1a and 1b:
The nomenclature of the spectra is derived from the work of Bruice et al.\textsuperscript{13} Catalyst 1a and 1b show the same UV-spectra, measured with 1.9 mg catalyst/10 ml in H$_2$O (0.47 mM). the catalyst can be found in a number of different distinct states:
1) “Blue colored radical” (semiquinone species) (0.47 mM catalyst in pure H$_2$O)

![Graph of UV spectrum for 1a and 1b in pure H$_2$O](image)

2) “Pink protonated radical” (0.47 mM catalyst in H$_2$O + 16.6 µL 6N HCl)

![Graph of UV spectrum for 1a and 1b with added HCl](image)
3) “Red Flavinium cation” (0.47 mM catalyst in H₂O + 16.6 µL 6N HCl + 50 µL 30% H₂O₂)

4) Riboflavin (starting material)
Due to the volatile nature of this compound, not all the pentane could be removed.
Due to the volatile nature of this compound, not all pentane could be removed.
