Polarized protein trafficking and disease:

Towards understanding the traffic jams in Microvillus Inclusion- and Wilson Disease.

Arend W. Overeem

Polarized protein trafficking and disease: Towards understanding the traffic jams in Microvillus Inclusion- and Wilson Disease.

This research was financially supported by:
Graduate School of Medical Sciences, University of Groningen
Nederlandse Vereniging voor Gastroenterology
De Stichting De Cock -Hadders
TKO Strong Foundation
The Daniel Courtney Trust

The experiments described in this thesis were conducted at:
Department of Biomedical Sciences of Cells & Systems, section Molecular Cell Biology, Groningen University Institute for Drug Exploration (GUIDE). University of Groningen, The Netherlands.

ISBN: 978-94-034-2191-9

Thesis design and layout: Arend Overeem

Printing: Ridderprint BV, Ridderkerk, The Netherlands

Polarized protein trafficking and disease: Towards un- derstanding the traffic jams in Microvillus Inclusion- and Wilson Disease.

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

maandag 20 januari 2020 om 16.15 uur

door

Arend Wouter Overeem

geboren op 8 augustus 1990
te Bennekom

Promotores

Prof. dr. S.C.D. van IJzendoorn
Prof. dr. D. Hoekstra

Beoordelingscommissie

Contents

Chapter 1.	9
Introduction and scope of the thesis	
Chapter 2.	19
Mechanisms of apical–basal axis orientation and epithelial lumen positioning	
Chapter 3.	45
The role of enterocyte defects in the pathogenesis of congenital diarrheal disorders	
Chapter 4.	79
Myo5b knockout mice as a model of microvillus inclusion disease	
Chapter 5.	97
MYO5B, STX3, and STXBP2 mutations reveal a common disease mechanism that unifies a subset of congenital diarrheal disorders: A mutation update	
Chapter 6.	125
A molecular mechanism underlying genotype-specific intra-hepatic cholestasis resulting from MYO5B mutations	
Chapter 7.	159
Pluripotent stem cell-derived bile canaliculi-forming hepatocytes to study genetic liver diseases involving hepatocyte polarity	
Chapter 8.	195
Summary and Perspectives	
Nederlandse Samenvatting	217
Acknowledgements	223
