List of Tables

Table 2.1: Interviews with ECU staff in the UK ..............................................................26
Table 3.1: Case selection ..............................................................................................47
Table 4.1: Considerations voiced in the for and against EP debate across cases ..........51
Table 4.2: Strongest driving/restraining force categories per case ..............................52
Table 5.1: Conceptualization of applied organizational performance indicators .......83
Table 6.1: Measurement of independent variables ....................................................93
Table 6.2: Measurement of dependent variables .......................................................94
Table 6.3: Interviews and informal conversations per case .........................................96
Table 6.4: Number of observation days ......................................................................96
Table 6.5: Available documents per case ....................................................................97
Table 6.6: Dimensions of working climate and applied scales ................................102
Table 6.7: Data collection of characteristics of demanded care ................................106
Table 6.8: Data collection of indicators of organizational quality ............................111
Table 6.9: Data collection of indicators of costs ......................................................113
Table 6.10: Data collection of medical quality forms per case ..................................114
Table 7.1: Number of patients per case per year and average per weekday .............117
Table 7.2: Urgency categories ..................................................................................118
Table 7.3: Source of referral ......................................................................................119
Table 7.4: Admission rate (overall admissions, GP-referral admissions, and
admissions per specialty) ......................................................................................120
Table 7.5: Characteristics of professional medical resources ....................................122
Table 7.6: ECU’s management structure and integration to the hospital .................123
Table 7.7: Context of EP implementation ................................................................124
Table 7.8: Feedback – personal mode (in-degree shares per professional group) ....128
Table 7.9: Coordination by programming and feedback (group mode) ....................129
Table 7.10: Case characteristics ..............................................................................133
Table 8.1: Waiting time per ECU in minutes .............................................................137
Table 8.2: Descriptive statistics: Waiting time in minutes (total) for self-referrals and
GP-referrals ........................................................................................................138
Table 8.3: Treatment time per case in minutes ......................................................140
Table 8.4: Treatment times (in minutes) for patients of surgery, internal medicine, and cardiology
.............................................................................................................................. 142
Table 8.5: Throughput time per case in minutes ..................................................... 143
Table 8.6: Average number of different care providers per patient ..................... 147
Table 8.7: Unscheduled returns The first row per characteristic provides the
percentage, the second row the absolute numbers ............................................. 149
Table 8.8: Number of consultations ..................................................................... 153
Table 8.9: Detail analysis +EP_L_EAR - Consultations for patients treated by EPs as
opposed to non-EPs ............................................................................................... 154
Table 8.10: Detail analysis +EP_S_EAR - Consultations for patients treated by EPs as
opposed to interns and GP-residents .................................................................... 154
Table 8.11: Consultations for self-referred patients in the large teaching hospitals .. 155
Table 8.12: Number of diagnostic tests ................................................................. 157
Table 8.13: Detailed analysis +EP_L_EAR - Ordered diagnostics per different doctors
...................................................................................................................................... 158
Table 8.14: Descriptive statistics of the working climate dimensions per case and
significant differences based on ANOVA analysis ............................................ 165
Table 8.15: Independent sample t-test .................................................................... 166
Table 8.16: Returned forms per case ................................................................. 174
Table 8.17: Patients seen by EPs* .......................................................................... 174
Table 8.18: Details on the doctors who saw sampled patients .............................. 175
Table 8.19: Correlations of medical quality (across all cases) ......................... 175
Table 8.20: Chi-square tests for independence (EPs as opposed to other doctors) .. 176
Table 8.21: Performance per case, summary ......................................................... 185
List of Figures

Figure 2.1: Emergence of new occupations .................................................................25
Figure 2.2: Emergence of new occupations II .............................................................26
Figure 4.1: Typology of situational factors in change processes.................................50
Figure 5.1: Basic concept of structural contingency theory .......................................60
Figure 5.2: Applied conceptualization of organizational structure .............................70
Figure 5.3: Contingency framework for ECUs in large teaching and small non-
teaching hospitals with and without EPs. ............................................................87
Figure 7.1: Average number of patients per case per hour ........................................118
Figure 8.1: Waiting time categories per ECU in minutes ...........................................137
Figure 8.2: Treatment time categories per ECU in minutes ......................................140
Figure 8.3: Mean treatment times (in minutes) for patients of surgery, internal
medicine, and cardiology per case ......................................................................142
Figure 8.4: Throughput time categories per ECU in minutes ..................................144
Figure 9.1: Development of EPs in the UK and the Netherlands ..............................188

List of Appendices

Appendix I: Force Field Analyses .............................................................................232
Appendix II: Interview guide ...................................................................................238
Appendix III: Questionnaire ....................................................................................242
Appendix IV: Form per patient (medical quality) ....................................................250
Appendix V: Actor Activity Diagrams .....................................................................252
Appendix VI: ANOVA analysis; Kruskal-Wallis Test; waiting times .......................266
Appendix VII: ANOVA analysis; waiting times for GP-referred as opposed to self-
referred patients ..................................................................................................268
Appendix VIII: ANOVA analysis; Kruskal-Wallis Test; treatment times ...............270
Appendix IX: ANOVA analysis; treatment times for surgery, internal medicine,
cardiology ...........................................................................................................272
Appendix X: ANOVA analysis; Kruskal-Wallis Test; throughput times .................274
