When the Shore becomes the Sea

New maritime archaeological insights on the
dynamic development of the northeastern
Zuyder Zee region (AD 1100 – 1400),
the Netherlands

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

donderdag 29 oktober 2020 om 12.45 uur

door

Yftinus Taeke van Popta

geboren op 30 augustus 1986
te Sneek

Promotores

List of illustrations

Figure 1.1. A heavy storm on the Zuyder Zee near the island of Schokland. 19th century painting by Hermanus Koekkoek (Zuiderzeecollectie, Enkhuizen).	1
Figure 1.2. Topographical map of the main research area (inside red lines) and surroundings in the center of the Netherlands.	4
Figure 1.3. Overview of the interdisciplinary research methodology of the current study. Information from the different layers is transported to the top layer (reconstruction).	8
Figure 1.4. Historical map of the Zuyder Zee region for c. AD 1535 (. Figure 2.1. The Zuyder Zee region in the center part of the Netherlands. The modern settlements in the Province of Flevoland are labeled in grey italics.	10
Figure 2.2. Recent aerial photograph of the reclaimed northeastern Zuyder Zee region.	15
Figure 2.3. Archaeological Landscape Map of the Netherlands, clearly depicting the old land (Wadden Sea peat area) and new land (recently reclaimed polders) in the northeastern Zuyder Zee Region (after Rensink et al. 2016).	16
Figure 2.4. Palaeogeographical development of the Zuyder Zee Region between 500 BC and AD 2000 (after Vos & De Vries 2013; Vos et al. 2020).	22
Figure 2.5. Density map of medieval archaeological objects that were found in the Noordoostpolder. A = Kuinre, B = Urk, C = Schokland, D – G = drowned settlements.	23
Figure 2.6. Detailed archaeological landscape map of late medieval Schokland, framing the dozens of small dwelling mounds (terps) and dikes.	27
Figure 2.7. Geographical representation of the list of chapels from the st. Odulphus monastery of Stavoren.	28
Figure 2.8. Multiple national and regional palaeogeographical reconstructions of the Noordoostpolder area.	29
Figure 2.9. Reconstruction of the northeastern Zuyder Zee region for AD 900: peat land dominates, limited marine influence and land cultivation.	31
Figure 2.10. Reconstruction of the northeastern Zuyder Zee region for AD 1100: Zuyder Zee enlarged majorly, new routes, land cultivation and habitation.	32
Figure 2.11. Reconstruction of the northeastern Zuyder Zee region for AD 1400: land loss, drowned settlements, harbour towns form.	33
	34

Figure 2.12. Reconstruction of the northeastern Zuyder Zee region for AD 1600: near-final size of Zuyder Zee reached, consolidation with dikes.	35
Figure 2.13. Historical map of the Zuyder Zee region by Christian Sgroten (c. AD 1573), depicting the final stage of land erosion and the rise of the Zuyder Zee.	36
Figure 3.1. Geographical map of the Zuyder Zee region at approximately AD 1832.	45
Figure 3.2. The 32 km long closure dam Afsluitdijk separating the North Sea and Wadden Sea (left) from the IJssel Lake (former Zuyder Zee).	46
Figure 3.3. South facing aerial photograph of the Noordoostpolder region.	48
Figure 3.4. Simplified palaeogeographical map of the research area, depicting the land loss in the Late Middle Ages and the presumed locations of drowned settlements.	49
Figure 3.5. Historical aerial photograph (1949) of the island Urk, taken shortly after the reclamation. Traces of land use are clearly visible to the north of the former island, while several medieval dike remains can be seen to the east.	50
Figure 3.6. Two archaeological examples that testify of the use of the sea: the remains of a fishing vessel and a freighter that both wrecked on the Zuyder Zee (IFMAF).	51
Figure 3.7. The island of Urk before and after the reclamation of the Zuyder Zee. The iconic lighthouse is clearly visible on both photographs.	52
Figure 3.8. Spatial representation of the three relevant transport zones.	53
Figure 3.9. Detailed LiDAR-data, depicting late medieval and early modern traces of land cultivation (network of ditches), close to the eastern shore of the Zuyder Zee (AHN ₂).	54
Figure 3.10. The place name 'Nagele' (red outline) mentioned in a copy of a 13th-century cartulary (left; after Tresoar), and the nameplate of the modern village Nagele, of which the name refers to its medieval predecessor (Dorpsbelang Nagele).	56
Figure 3.11. An example of the use of female ship names in the Zuyder Zee region.	57
Figure 3.12. The lighthouse Oud-Kraggenburg, once an isolated location at 6 km from the mainland, now part of the mainland and completely surrounded by meadows.	58
Figure 4.1. Left: an impression of the Zuyder Zee during the Battle on the Zuyder Zee between the Dutch and Spanish fleet (Jan Theunisz Blanckerhoff, 1663, Rijksmuseum Amsterdam). Right: the former Zuyder Zee in the central part of the Netherlands (1), separated today from the North Sea by a large dam (2).	62
Figure 4.2. The church of Ens on the island Schokland surrounded by the Zuyder Zee in 1850 (painting by Hermanus Koekkoek, Zuiderzeemuseum) and photographed as it appears today.	63
Figure 4.3. Map of the Zuyder Zee region, c. 1666. by Pieter Goos. The circle marks the study area (Noordoostpolder region).	64
Figure 4.4. Reconstruction of the northeastern Zuyder Zee region in medieval times (c. AD 1100). Dark gray represents land (light gray represents submerged land), dotted areas represent traces of habitation, white represents water.	65
Figure 4.5. Combined archaeological density and distribution map, based on the content of the MSD database.	67
Figure 4.6. Distribution map of archaeological finds, only showing sites that contain at least two object categories.	67
Figure 4.7. 15th-century copy of a 13th-century charter of the St Odulphus monastery that mentions Fenehuysen.	68
Figure 4.8. A dense network of linear structures is visible on the LiDAR surface topography data (AHN ₂) of the Kuinre Forest (area 5 in Fig. 4.6).	69
Figure 4.9. Photograph of a section of one of the test trenches dug through a historical ditch in the Kuinre Forest (area 5 in Fig. 4.6).	70
Figure 4.10. Profile drawing of one of the test trenches from the Kuinre Forest.	71
Figure 4.11. Overview of the ditch-network field boundary system (blue lines) in the Kuinre forest (area 5 in Fig. 4.6) and the historical inland field system depicted on the 1850 Topographical Military Map.	71

Figure 4.12. A selection of archaeological finds from the clayey fill of the late medieval ditch network in the Kuinre Forest (Fenehuysen II subarea (area 5 in Fig. 4.6). From top to bottom: bricks, animal bones, red ware.	73
Figure 4.13. Reconstruction of the shifting nature of Fenehuysen. Fenehuysen I: tentatively located. Fenehuysen II and III: proven locations.	74
Figure 5.1. The Zuyder Zee region at the end of the 19th century.	79
Figure 5.2. An example of different drainage systems in adjacent lots in Eastern Flevoland in 1960: the distance between two drains is 24 m on the left and 48m on the right.	81
Figure 5.3. Aerial photograph from 1949; marked on it are the incorrect 'original' registered and (corrected) 'actual' wreck site locations for shipwreck NE 87.	82
Figure 5.4. Examples of large-scale deviations, due to the use of lot-centre coordinates, between incorrect recorded locations and reconstructed actual wreck site locations in Southern Flevoland.	86
Figure 5.5. An example of a misinterpreted shipwreck location.	87
Figure 5.6. This figure shows the actual wreck site of shipwreck ZM 8 (red dot) and its recorded location (blue dot).	88
Figure 5.7. Six examples of excavation trenches that are clearly recognizable in historical aerial photographs.	89
Figure 5.8. Six examples of wreck sites that can be recognized as discolorations in historical aerial photographs.	90
Figure 5.9. LiDAR data of three wreck sites with clearly recognizable soil-covered shipwrecks (after AHN2).	91
Figure 5.10. The largely intact and well-preserved rudder of shipwreck OR 49 that was discovered outside the excavation trench.	92
Figure 5.11. Density analysis (kernel density) of wreck sites in the Noordoostpolder, based on the SDF 2 (2012) and SDF 3.	93
Figure 5.12. Distribution map of shipwrecks in Flevoland.	94
Figure 5.13. Simplified model of the effects of land subsidence and the gradual destruction of shipwrecks.	95
Figure 5.14. Examples of shipwrecks excavated in the province of Flevoland, parts of which have been destroyed by ploughing. The maximum depth of the plough soil corresponds to the cut-off wreck parts.	96
Figure 6.1. Topographical map of the Zuyder Zee region with historic names of entities governing the region between the 10th - 16th century over today's provincial boundaries. The highlighted parts (Noordoostpolder, Eastern- and Southern Flevoland) are the 20th-century reclaimed parts of the Zuyder Zee.	100
Figure 6.2. Distribution map of shipwrecks and late medieval objects within the borders of the Noordoostpolder. Source shipwrecks (Van Popta & Van Holk 2018), source settlements (Chapter 4).	101
Figure 6.3. Palaeogeographical development of the northern part of the Netherlands between AD 800 and 1850 (after Vos et al. 2020). Contours of 20th century reclamations (Fig. 6.1) for reference.	103
Figure 6.4. Landscape development and habitation in the Noordoostpolder region in the 12th–13th centuries (left) and 14th–15th centuries (right).	105
Figure 6.5. 15th-century copy of 13th-century charter of the St. Odulphus monastery that mentions the late medieval settlements in the Noordoostpolder region (highlighted).	106
Figure 6.6. Top left: the reconstruction of Kuinre castle I. Top right: overview of Kuinre, its castles and a simplified interpretation of the late medieval course of the Kuinder river. Bottom: impression of present-day Kuinre and canalized Kuinder river.	107
Figure 6.7. Left: the size of the city center of Kampen in c. AD 1335 (orange) and AD 1400 (orange and red). Right: a present-day aerial photograph of Kampen. The houses in between both churches form the oldest part of the city.	110

Figure 6.8. Left: Urk (black circle) as part of a large peat peninsula during the Roman Period (palaeogeographical map AD 100: Vos et al. 2020), breached and broken up in early medieval times. Right: as an island in the middle of the Zuyder Zee in the early 20th century.	112
Figure 6.9. Presumed location of the late medieval drowned settlement Nagele, based on the distribution and density of archaeological objects.	115
Figure 6.10. Distribution of late medieval cogs (c. AD 1200 – 1500) from the Noordoostpolder region.	116
Figure 6.11. Simplified scheme of the late medieval economic development of the Noordoostpolder region.	117
Figure 8.1. Excavation of the 18th-century English merchantman ‘Queen Anne’ (NK 47-II) in the middle of arable crops in the Noordoostpolder (2018), c. 2 km west of settlement area 5 (see Fig. 6.4).	127

List of tables

Table 1.1. Overview of the research approach(es) of the current study.	9
Table 2.1. Overview of most-used materials and their scientific importance.	19
Table 5.1. Overview of the records that were removed or added to the third version of the SDF.	83
Table 5.2. Overview of the 218 adjusted shipwreck locations, divided into deviation and distance categories. Each of the deviation categories has an average deviation (per wreck site) and overall deviation.	85
Table 5.3. Overview of lot sizes for different parts of the province of Flevoland.	86
Table 5.4. Classification of shipwrecks based on the two main factors for maritime archaeological heritage management: presence or absence, and accuracy of wreck location.	93
Table 6.1. Cog-like vessels from the Noordoostpolder region (based on Van Holk 2010; Blok 2014; Van Popta & Van Holk 2018; Waldus 2018).	115
Table 6.2. General overview of the development of each of the examined late medieval settlements of the research area.	118
