Acknowledgements

I started my PhD project on a very rainy day in September. Nothing special you might think but that rainy day was followed by approximately 3 weeks of nasty Dutch weather, in which I forgot what the sun looks like and how is to go out without rain protection. However, since rain is considered a good omen, I thought this was a sign for the things to come. Now, more than four and a half years later, I can definitely say that my PhD journey caused a remarkable change both in my professional and private life.

I find it difficult to express my gratitude and admiration to the people who have contributed to the making of this thesis. I just hope that all the names written here will receive the proper value of their influence. First of all, I would like to express my gratitude to my promoters, Paul Luiten, whose knowledge added considerably to my graduate experience, Eddy van der Zee, who introduced me to the wonderful world of brain anatomy and Ulrich Eisel who refreshed my memory of molecular biology. To all of you thank you and all my consideration for your supervision. I cannot express enough my gratitude to my copromoter Ingrid Nijholt. Not only that I had the fortune to work with you but I also had the possibility to learn… and learn… and learn more from your experience. I remember the overwhelming beginning, the long working hours, and finally the exciting results. It was a pleasure setting up new techniques, designing and performing experiments, and making order in the data chaos! I believe with all my heart that your supervision and assistance allowed me to extend my knowledge and to become the scientist that I am today. Moreover, thank you and Robert-Jan for your friendship and all your help.

I thank the members of the reading committee: Martina Schmidt, Matthijs Verhage and Benno Roozendaal for their time, effort and timely response.

I would also like to acknowledge the collaborators. Thank you Martina Schmidt for the helpful discussions and for kindly providing antibodies and the Epac activator, and Botond Penke for helping synthesize the peptide inhibitor. Likewise, thank you Csaba Nyakas for comprehensive discussions over immunostaining.

I would also like to thank the master students I have “tortured” during the last four years: Janne Papma, Martijn Clausen, Marco de Bruyn, Anna Rybczyńska, Diane Jansen, Marcia

Peters, and Sabina Lukovac. To all, thank you for all your help. Special thanks to “Mister” Wouter Scheper, not only for being such a joy in the lab but also for becoming an amazing friend. Appreciation also goes out to Marije Lowik, Bert Venema and Jan Keijser for all of their technical assistance throughout my PhD training. Many thanks goes also to Joke Poelstra, Henk Visscher, and Jaap Bouwer for all the times in which their assistance helped me along the way.

Furthermore, I would like to thank to all my ex-colleagues Ivica Granic, Timur Cetin, Nikoletta Dobos, Viktor Roman, Deepa Natarajan, Doretta Caramaschi, Alinde Wallinga, Girstaute Dagyte and Roelina Hagewoud. It was definitely fun having all of you around! I wish you all good luck with everything!

Thank you Britta Kust, Janine Wieringa and Diana Koopmans for coordinating the BCN training programme. It was interesting to meet other PhD students, make new friends and maybe future collaborators.

I would also like to acknowledge several people who have made a difference in my life.

Initial, am fost foarte trist cand am plecat din tara dar am fost si mai trist cand am ajuns in Groningen. Cu toate acestea, cativa (putini dar importanti) romani m-au facut sa ma simt ca acasa departe de casa. Ii multumesc foarte mult Amaliei Dolga pentru explicatiile detaliate si ajutorul in laborator, pentru drumurile prin oras dupa acte, cinele in comunitate si nu numai. Totodata, multumesc Cristi Marocico si Lavinia Slabu pentru discutiile in comunitate, sprijinul moral acordat si mai ales pentru prietenia voastra. Inca o data multumesc pentru tot dragi romani! Draga Mihai Nedelcu (specialFX) iti multumesc pentru entuziasmul si prietenia ta, pentru drumurile de la aeroport acasa si vacantele petrecute impreuna. Recunosc, de la tine am invatat ca niciodata nu ai suficiente degete sa manevrezi nenumarate camere foto si ca nici o panoramare nu e suficient de mare.

Doresc sa multumesc din toata inima familiei mele. Imi pare rau ca a trebuit sa plec de acasa pentru a-mi gasi propriul drum in viata dar apreciez faptul ca m-ati sustinut in alegerea luata. Dorul de casa imi va aminti intotdeauna de voi si ajutorul vostru. Dragii mei, mama, tata, Mari, Gheorghe si minunatii mei bunici va multumesc din suflet pentru tot!

Draga mea Oana, iti multumesc foarte mult ca ai fost aproape de mine si ca ai gustat din experienta olandeza. Iti multumesc pentru dragostea ta si pentru ca ai pus ordine in haosul din jurul meu. Cu tine, viata este minunata.
