## Table of contents

|   |           |
|---|-----------|
| <b>Summary</b>  | <b>9</b>  |
| <b>Samenvatting</b>   | <b>14</b> |
| <b>Chapter 1. Introduction</b>  | <b>19</b> |
| 1.1 Precious- and platinum metals   | 19        |
| 1.1.1 Platinum metals in catalysis  | 19        |
| 1.1.2 Platinum metals in industrial heterogeneous catalysis   | 20        |
| 1.1.3 Platinum metals in industrial homogenous catalysis  | 21        |
| 1.2 Homogeneous hydrogenation reactions with platinum metals  | 22        |
| 1.2.1 Homogenous asymmetric hydrogenation reactions   | 22        |
| 1.3 Homogeneous carbonylation reactions with platinum metals  | 28        |
| 1.3.1 Hydroformylation/hydrocarbonylation reactions   | 28        |
| 1.3.2 Chemoselectivity in the oxo-synthesis   | 29        |
| 1.3.2.1 Palladium catalysed hydro-acylation and hydroformylation  | 30        |
| 1.3.3 Asymmetric homogeneous hydroformylation   | 32        |
| 1.3.4 Asymmetric homogeneous hydro-acylation reactions  | 34        |
| 1.4 Aims and outline of this thesis   | 35        |
| 1.5 References  | 37        |
| <b>Chapter 2. Experimental Studies on the Conversion of Olefins and Syngas to Ketones using Homogeneous Palladium-Diphosphine Catalysts</b> | <b>41</b> |
| 2.1 Introduction  | 41        |
| 2.2 Experimental  | 43        |
| 2.2.1 Chemicals   | 43        |
| 2.2.2 Experimental setup  | 44        |
| 2.2.3 General procedure   | 45        |
| 2.2.4 Product analysis  | 45        |
| 2.3 Results   | 46        |
| 2.3.1 Catalytic hydro-acylation reactions in dichloromethane  | 47        |
| 2.3.2 Catalytic hydro-acylation reactions in methanol   | 50        |
| 2.4 Discussion  | 53        |
| 2.5 Conclusions   | 58        |
| 2.6 References  | 59        |
| <b>Chapter 3. Enantioselective Hydro-acylations of 1-Alkenes to <math>\alpha</math>-Methylketones using Palladium/Diphosphine Catalysts</b> | <b>61</b> |

|   |  |           |
|---|--|-----------|
| 3.1   | Introduction   | 61        |
| 3.2   | Experimental   | 64        |
| 3.2.1   | Chemicals  | 64        |
| 3.2.2   | Experimental set-up  | 65        |
| 3.2.3   | General procedure  | 65        |
| 3.2.4   | Product analyses   | 66        |
| 3.3   | Results  | 67        |
| 3.3.1   | Initial screening experiments using the a typical Josiphos ligand                    | 68        |
| 3.3.2   | Screening experiments with the Josiphos ligand family                                | 71        |
| 3.3.3   | Screening results for the Duphos ligand family and a Walphos and ferroTANE ligand    | 76        |
| 3.4   | Discussion and mechanistic aspects   | 79        |
| 3.4.1   | Chemoselectivity   | 80        |
| 3.4.2   | Regioselectivity   | 82        |
| 3.4.3   | Enantioselectivity   | 83        |
| 3.5   | Conclusions  | 85        |
| 3.6   | References   | 86        |
| <b>Chapter 4. Enantioselective Syngas Conversions: Hydro-acylations of 1-Alkenes to <math>\alpha</math>-Methylketones using a Palladium/Josiphos Catalyst</b> |  | <b>89</b> |
| 4.1   | Introduction   | 89        |
| 4.2   | Experimental Section   | 92        |
| 4.2.1   | Chemicals  | 92        |
| 4.2.2   | Experimental set-up  | 92        |
| 4.2.3   | General procedure  | 93        |
| 4.2.4   | Product analyses   | 94        |
| 4.2.5   | Statistical modeling using Design Expert   | 95        |
| 4.3   | Results  | 96        |
| 4.3.1   | Experimental window and approach   | 96        |
| 4.3.2   | Effect of process conditions on the ee of 4-methyl-5-decanone                        | 97        |
| 4.3.3   | Selectivity for 4-methyl-5-decanone ( $S_{MD}$ ) as a function of process conditions | 99        |
| 4.3.4   | Chemoselectivity versus process conditions   | 101       |
| 4.3.5   | Regioselectivity   | 103       |
| 4.3.6   | Olefin conversion  | 104       |
| 4.4   | Discussion   | 104       |
| 4.4.1   | Chemoselectivity   | 105       |
| 4.4.2   | Regioselectivity   | 107       |
| 4.4.3   | Enantioselectivity   | 108       |
| 4.5   | Conclusions  | 109       |
| 4.6   | References   | 110       |

**Chapter 5. Kinetic studies on asymmetric hydrogenations of methyl-2-acetamido acrylate using a homogenous Monophos<sup>TM</sup> based Rhodium catalyst** **112**

|         |   |     |
|---------|---|-----|
| 5.1     | Introduction  | 112 |
| 5.2     | Experimental  | 115 |
| 5.2.1   | Chemicals   | 115 |
| 5.2.2   | Synthesis of Rh(Monophos) <sub>2</sub> (COD)BF <sub>4</sub>                 | 115 |
| 5.2.3   | Experimental set-up for hydrogenation experiments                           | 115 |
| 5.2.4   | Determination of the volumetric G-L mass transfer coefficient ( $k_{L,a}$ ) | 116 |
| 5.2.5   | General procedure for a hydrogenation experiment                            | 117 |
| 5.2.6   | Determination of substrate concentration                                    | 118 |
| 5.2.7   | Analysis  | 118 |
| 5.2.8   | Kinetic modeling  | 118 |
| 5.3     | Results and discussion  | 119 |
| 5.3.1   | Catalyst precursor synthesis  | 119 |
| 5.3.2   | Kinetic experiments   | 120 |
| 5.3.3   | Effect of process conditions on catalyst activity and product ee            | 121 |
| 5.3.4   | Model generation  | 122 |
| 5.3.5   | Modeling results  | 127 |
| 5.3.5.1 | Model implications  | 128 |
| 5.4     | Conclusions   | 130 |
| 5.5     | References  | 131 |

**Chapter 6. Combined Dehydration/(transfer)-Hydrogenation of C6-sugars (D-glucose and D-fructose) to  $\gamma$ -valerolactone using ruthenium catalysts** **133**

|         |  |     |
|---------|--|-----|
| 6.1     | Introduction   | 133 |
| 6.2     | Materials and methods  | 137 |
| 6.2.1   | Chemicals  | 137 |
| 6.2.2   | Experimental procedures  | 137 |
| 6.2.2.1 | Typical experimental procedure for the combined dehydration/transfer hydrogenation of D-fructose to GVL with Ru/C, TFA and formic acid | 138 |
| 6.2.2.2 | Typical experimental procedure for the combined dehydration/hydrogenation of D-glucose to GVL with Ru/C and TFA                        | 139 |
| 6.2.2.3 | Typical experimental procedure for the dehydration/hydrogenation of D-glucose to GVL with a homogeneous Ru/TPPTS catalyst and TFA      | 139 |
| 6.2.2.4 | Experimental procedure for the conversion of D-glucose and D-fructose to LA using TFA as the catalyst                                  | 139 |
| 6.2.3   | Analytical methods   | 140 |
| 6.3     | Results and discussion   | 140 |
| 6.3.1   | Brønsted acid selection  | 140 |
| 6.3.2   | Combined transfer hydrogenations-dehydration of C6-sugars to GVL with formic acid as the hydrogen source                               | 143 |
| 6.3.3   | Dehydration/ hydrogenations of C6-sugars to GVL with molecular hydrogen as the hydrogen source   | 145 |

|       |  |            |
|-------|--|------------|
| 6.3.4 | Conversion of D-glucose to GVL by TFA in combination with a homogeneous water soluble ruthenium hydrogenation catalyst | 149        |
| 6.4   | Conclusions  | 150        |
| 6.5   | References   | 151        |
