ACKNOWLEDGMENTS

First of all, I would like to thank my supervisor, Prof. Robert Hofstra. Robert, I am very grateful for all the work and enthusiasm you put into this thesis, and for all the great opportunities, trust and support that you have given me throughout these years. Thank you also for so many crazy moments (on 3 different continents!), which made this journey a lot more fun than just a normal job. Thank you so much for always being next door, ready to share amazing laughs, problems, struggles and plans. It is so easy to be happy working with you!

Prof. Raquel Seruca, I would like to thank you not only for being my second supervisor, but also for introducing me to IPATIMUP when I had just finished studying Biology. Raquel, thanks to you I had my first taste of research and start thinking of doing a Ph.D. Thank you for the privilege and opportunity of working in such a great team in Portugal. I am also very grateful that you encouraged me to go abroad and that you accompanied me on this Dutch adventure.

Then I would like to thank Dr. Helga Westers and Dr. Rolf Sijmons. It is really a great pleasure to have you both as my co-supervisors. Helga, thank you for dedicating so much of your time to the papers in this thesis and to my other experiments. Besides enjoying your company while travelling to meetings, I am personally very proud to be your first Ph.D. student! Rolf, thank you for your help and always being so enthusiastic about the projects. Your suggestions for the papers were very helpful, especially when we were struggling with the adenomas story. And your good mood and funny stories are always helpful!

Three institutions have hosted my work as a Ph.D. student: the Department of Genetics of the University Medical Centre Groningen, the Netherlands; the Institute of Molecular Pathology and Immunology of the University of Porto, Portugal (3 months); and the Department of Pathomorphology in the Medical College of Jagiellonian University, in Kraków, Poland (6 months). Thank you also to Prof. Charles Buys, Prof. Cisca Wijmenga, Prof. Sobrinho Simões and Prof. Jerzy Stachura for making me welcome at your institutions.

I am grateful to the Portuguese “Fundação para a Ciência e a Tecnologia” for financing my project (grant ref.: SFRH/BD/18832/2004).

I am also grateful to the reading committee, formed by Prof. M.J.E. Mourits, Prof. H. Morreau, and Prof. J. Lubiński, for their willingness to read my thesis and for giving their approval for the defence.
To all the co-authors of the papers, thank you for your collaboration. Jackie Senior, thank you for your help in improving my manuscripts. Prof. Jan Kleibeuker and Prof. Harry Hollema, thank for your input for my projects and for making me always feel very welcome at meetings with you.

I would like to thank all the people in the three host institutions who helped me with this thesis in some way or other. I apologize for not being able to mention all your names, but I hope you can identify yourselves in the following references.

In Groningen, a special mention to the HNPCC/Oncogenetics group. Discussing with you guys during the weekly work meeting and laughing a lot was the best therapy I could have had at several moments. Thank you all also for your patience in speaking English at 9 am! The group lost some elements, gained some new ones. I would like to mention a special memory, of Frans Gerbens, whom we lost almost a year ago.

In the lab I cannot forget Krista B., who helped me a lot doing thousands of sequences, and Chris, my first student, for his help when I had hundreds of primer sets to design, to optimize and, of course, later on to use. Also thanks to Krista K., Bart, Paul, Bahram, Jan O., Pieter and Yvonne.

I’m also grateful to the colleagues who made my lunch time in the first year a heel gezellig tijd: Arja, Edwin, Bea, Jos, Chantal. Special thanks to Arja who literally opened the doors of the department on my first day at work 😊

Very special thanks to all my room mates (I’ve had at least 13!) for the relaxed atmosphere at work and sharing a lot more with me than only the room. My fellow Ph.D. students thank you for the complicities proper of the Ph.D. life (and age). Thank you to all the students with whom I got some educational experience. There’s always a lot to learn with you. And of course everyone in the department with whom I have had contact and nice talks, all those in the various sections who helped in different ways: labs, medical doctors, secretariat, informatics, finances, etc.

With some of you I also had very good moments outside work, these usually included food, or drinks, or trips, or a mixture of all three: Maria, Renée, Jihane, Marina, Greg, Bahram, Jan Jongbloed, Yunia, Monique, Gosia, Agata, Mats, Gerben, Tjakko. Thank you for that! Thank you Maria, Greg, Renée, and Jan for meeting up with me in Kraków! Renée, we sure had a great time everywhere we went together, especially in Japan.

In Kraków, thank you Monika, Anastazja, Ania, Agnieszka, Rasa, Danuta, Piotr, Dr. Dąbroś, the new students, and everybody around that received me with a smile while I spoke my first
sentences in Polish. It was great to work and to live in that beautiful city with you. Monika, thanks for welcoming me in your lab and to your family, and all the adventures you always had for me. And, of course, for the Polish summary for this thesis!

In Porto, I am grateful to Cirnes and Sónia for the help with the MSI experiments, to the friends I gained there, and to so many people that made IPATIMUP feel like home. Dear Carla Oliveira and Prof. Fátima Carneiro, thank you for your recommendation letters to FCT and everything you taught me.

I would also like to acknowledge the people, colleagues and friends, from recent and ancient times, from my Portuguese, Polish and Dutch lives, who accompanied me through the years in a more personal way.

Dear friends, thank you for the good times, the advices, the mails, the phone calls at 4 am, the Euromeetings 😊. Basically, thank you for always being there for me at important moments. Dear Pawel, thank you for all your efforts and everything that we shared during a big part of this Ph.D. project. I lived and learned a lot with you and your family. To my closest friends in Groningen, Gilda, Martin, Maria, Kaushal, Mateusz, Ana Duarte, Karla, Roberta, Bispo, Susana, Vítor, thank you for being my “family” over here. I guess I don’t need to describe how much I appreciate your company. Maria and Mateusz, my paranimfen, thank you also for accepting this role.

Dear Pedro, thank you for being by my side during the joys and worries of the last year. Thank you for always being interested and ready to help me with my work and for the fantastic time we have been having together. First as a friend, then as vriend, you brought new colours to “my” Holland and to my life! Thank you for all the trust and support in important decisions. Life is so much easier and happier with you around.

To my family, especially to Chico, Pai, Sofia and Noémia (my brother, father, sister and sister-in-law), I want to thank you all for always finding a way to be present in my daily life and making me feel special, and to apologize for being absent from “home” for such long periods. Thank you also for taking care of so many things for me. Above all, I am very grateful to you for always believing in me and pushing me forward! To my mother and my grandparents, I’m sure you are the stars behind all the luck I have had. I hope you can be proud of my work and decisions. This thesis, and all it represents, is dedicated to you.
