Acknowledgments

It is my pleasure to thank all people involved in the PUCA pump project during the years taken to complete this thesis:

Firstly, I would like to thank my promoters: Prof. Dr. Ir. H.J. Busscher and Prof. Dr. P.W. Boonstra. Their critical remarks were invaluable and helped me to improve my thesis.

I am grateful to my referents: Dr. P.K. Blanksma and Dr. G. Rakhorst. Although extremely busy as a cardiologist, Dr. Blanksma always tried to find time for me and my numerous “Why?” and “How?”. Expert in the area of circulatory assist devices, Dr. Rakhorst was the motor behind the PUCA pump project. He supported me in all the difficulties I have encountered as a scientist and as a man. He always was there when I needed him (even in the weekend), he taught me how to write articles, to use computers, and to perform scientific research. Without his support I would not have been able to accomplish this thesis.

I would like to thank the members of the Reading Committee: Prof. Dr. M.H.J. Brouwer, Prod. Dr. J.M. van Horn, and Prof. Dr. Ir. H. Reul for their positive judgment, for their remarks and suggestions on my thesis. I am thankful to Prof. Dr. Ir. H. Reul also for giving me the chance to be involved in other experiments with blood pumps in order to learn more about the mechanical circulatory support systems.

Jan Elstrodt, my favorite bio-technician, thank you for your help, your critical remarks, and for the suggestions how to improve my animal experiments.

Dr. Ir. G.J. Verkerke, who coordinated all technical aspects of the PUCA pump development, thank you for using results of animal experiments for improving the PUCA pump prototypes and for your critical remarks on my manuscript.

Dr. Don Miller, thank you for correcting my English language.

I would like to thank also:

- Drs. E.D. de Jong for the data-accusation system (LabView) and for data recording.
- K. Bel and the staff of Central Animal Lab in Groningen for the technical assistance during all animal experiments.
• J. Hoks and Ing. A. van der Plaats for the development and manufacturing of the PUCA pump prototypes.
• Drs. Ch. Kik for performing surgery during the animal experiments.
• Dr. C.D.J. de Langen for the advise how to use pacemakers and echo-crystals.
• Drs. H. Louwerenburg, Ing. V. Larik, Ir. L. Kretzers for their help and support during the animal experiments for development of an animal model of selective coronary atherosclerosis.
• Dr. M.J.A. van Luyn and F. Dijk for the histological examination of the coronary arteries.

Financial support for the publication of this thesis by the following companies is gratefully acknowledged:

• Bayer Nederland B.V., Mijdrecht
• Bonte Technology B.V., Zwolle
• Datascpe B.V., Hoevelaken
• Edwards Lifesciences B.V., Utrecht
• Medtronic – Bakken Research Center, Maastricht
