Acknowledgements
ACKNOWLEDGEMENTS

It has been a long journey since I arrived to The Netherlands in the summer of 2001. Besides a great professional gain, this time has been for me an amazing life experience. Looking back, I had the honour of working with many people, and I would like to thank some of them who make this thesis possible.

My deepest gratitude goes to my first promotor, Professor Flora Haaijer-Ruskamp, who guided my research steps from the very beginning. Dear Flora, without your continuous commitment this thesis would have never come to this point! Thank you for your continuous challenge, efficient feedback, and your patience. Above all, thank you for teaching me that behind sophisticated research questions and statistical analysis it is the patient we should think about… whether in fact medication has a beneficial or a harmful effect. I would also like to thank you for your willingness to help me in my future career; this is something not easy to forget.

I am also grateful to my co-promotor, Dr. Adelita Ranchor, from whom I learned to focus on the papers, and the importance of insight into research questions. A deep respect also for my second co-promotor, Dr. Mike DeJongste, who guided my clinical steps during these years. Dear Mike, your professional advice and your words of encouragement in my difficult moments are unforgettable!

I am also indebted to my second and third promoters, Dr. Robbert Sanderman and Dr. Dirk Jan van Veldhuisen. Dear Robbert, thank you for your advice and respect during these years. Dear Dirk Jan, you came later into this project, however, through your involvement the quality of my thesis has increased. Thank you for guidance, thorough comments, and especially for teaching me to focus on the main issues of the papers. I will also never forget the idea of “selling the message of the paper”.

I would also like to thank to the members of the reading Committee, Prof. dr. W. H. van Gilst, Prof. dr. L. T. W. de Jong-van den Berg, and Prof. dr. F. Zijlstra for the careful reading of my thesis and their valuable suggestions.

I am also grateful to some of my co-authors. First, to Ellen van Jaarsveld, who supported me as a postdoc during the first, difficult years of research experience. A special word to Dr. Carolien Lucas and Ger Cleuren from Rijnland Hospital whose database made possible the writing of two articles of this thesis. Above strict administrative issues, I would like to thank you for the nice manner you received me in Leiderdorp. Also, I would like to thank to Rosemarie Arnold for giving me the chance to work on her database.
During the last four years I had maybe a unique experience of working with people from three departments: clinical pharmacology, health psychology, and cardiology. Although it was not always easy, I had in fact the opportunity to learn more through this collaboration. First, a very special experience for me was as a physician among health psychologists and sociologists. I enjoyed working with them, maybe because I was always interested in this field. So, although I struggled mainly with the saga of pharmacological therapy, I learned a lot about adaptation to disease, and the importance of socio-economic status or partner relationships. I would like to thank to my colleagues from this department. A special word for Eric van Sonderen, who is not only the person to whom I ended up with questions about study design or statistical analysis, but also a person I could rely on in personal problems. Dear Eric, thank you for your support during these years. To Mariet, my companion of long working hours, a deep word of respect. To Ans, my roommate, who always had time to help me with Dutch lessons or other administrative issues. Many thanks to Truus, who brought light in the Reference Manager saga, and the administrative issues of PhD defense. I would like also to thank to my PhD colleagues: Giorgio, Tessa, Inge, Lihua, Mario and Marieke (thank you in addition for all the translation help!). It is a pity that we did not spend more time together! Many thanks to Joke and Joost, who were willing to share with me their experience on PhD defense complexity… Also, many thanks to Renata and Tineke who helped me with administrative matters. Further, a special thank to Arnold Rozema who is the best person to deal with financial matters!

I would like also to thank to my colleagues from the Clinical Pharmacology department, Petra, Peter, Heidrun, Liana, Larissa, Jacoba, Jasperien to whom I shared many nice moments. My deep appreciation also for the group of Social Pharmacology. I would like to thank to all of you for sharing your excellent knowledge and ideas over our DRUGS meetings and courses! I hope we can keep in touch.

In the Cardiology world, many thanks to Dr. Adriaan Voors, who reviewed two of my papers without claiming authorship, quite uncommon nowadays…Your knowledge in HF research is impressive! A special word to Tiny Jaarsma and the other members of the COACH group, we had very interesting meetings together! Also, many thanks to Dr. Hector Bueno, who offered me the great opportunity of working with him in Madrid. A deep regret for everything…

I would also like to thank to some people who helped me during my Master time in Utrecht. First, to Leo, who had time and willingness to help me with all the administrative problems of transport, moving, TV, all the things that make the life of a foreigner impossible! Dear Leo, thank you for all your precious support, also for the nice
dinner in your house. Also, many thanks to my landlady. Dear Bertie, it was a pleasure for me to stay in your house!

I want also to thank my friends from Groningen: Laura, Ileana, Mihai, Silviu, Dan and Irina, Mirko, Magda and Mihai, Maria, Iskra, Patricio and Anita, Danijela, Jarir, Mark and Katja, Eva, Joyce, and Niculai thank you for making my life so much nicer! A special thank to my dear friend Dana. Although far away, you have always been so close to me! Many thanks to my basket and volleyball teams for supporting me with my incredible skills…

I would like to give a special thanks to my paranymphs Efi and Juliet for helping me with the administrative issues, but especially for their precious friendship.

Familia mea a fost intodeauna atat de importanta pentru mine. Aceasta teza este dedicata memoriei tatalui meu si a bunicii mele. Ei mi-au marcat viata, si au fost modelul meu de personalitate, angajament si responsabilitate. E dificil sa-mi gasesc cuvinte pentru a multumi mamei mele. Draga mea “Aurora boreala”, fara dragostea si sacrificiul tau nu as fi ajuns niciodata in acest stadiu al carierei mele! Mii de multumiri matusii mele. Dragostea, suportul, si incurajarile tale au fost esentiale pentru a realiza mai mult in cariera mea, si ca persoana. Un cuvant special pentru fratele meu. Suportul tau si extraordinarul tau simt al umorului mi-au dat forta de a merge inainte! As vrea de asemenea sa multumesc verisoriilor mei, si celorlalti membrii ai familiei mele, care au fost intodeauna aproape si m-au sustinut in diferite forme.

Last, but the most important, my deepest gratitude goes for Adrian. An excellent clinician, and a very good statistician, you inspired me the interest for data analysis. It was partly because of you, and with your support that I embarked myself in very sophisticated data analysis. I would like also to thank you for bringing normality to my crazy scientific life; we travelled the whole Europe and even to the far South American continent, we enjoyed movies and music, and I learned a lot about football championships…. I would like first of all to dedicate this thesis to you!
