Chapter 10

SecD and SecF plays an important role in SecDF functioning.

translocation across the cytoplasmic membrane of proteins regulated by the temperature.

located fibrinogen-binding adhesin of Microbiol

oligodeoxynucleotide-directed mutagenesis.

Calcium promotes sorting signal binding by altering the mobility and structure of an active site loop.

vancomycin-intermediate resistance.

analysis of aureocin A53, a new, atypical bacteriocin from Staphylococcus aureus

activity produced by Staphylococcus aureus

clumping factor A and capsular polysaccharide by DegU, ComA and Cell Wall Associated Proteins from Staphylococcus aureus.

Proteolytic cleavage and cell wallanchoring at the LPXTG motif of surface proteins in gram-positive bacteria. Mol Microbiol 14: 115-121.

Identification of prokaryotic and eukaryotic signal peptides and prediction of their cleavage sites. Protein Eng 10: 1-6.

Disruption of the gene encoding p12 (SecG) reveals the direct involvement and important function of SecG in the protein translocation of Escherichia coli at low temperature. EMBO J 13: 3272-3277.

Co-transfer of vancomycin-resistant to vancomycin-resistant Staphylococcus aureus strains and demonstration of an

Construction of improved M13 vectors using Gene.

A single clone of C55.

apal Environ Microbiol 64: 4803-4808.

Proteolytic cleavage and cell wall anchoring at the LPXTG motif of surface proteins in gram-positive bacteria. Mol Microbiol 14: 115-121.
