**REGULATORY ENZYMES OF MITOCHONDRIAL B-OXIDATION AS
TARGETS FOR TREATMENT OF THE METABOLIC SYNDROME**

MARIJKE SCHREURS

Research

The studies described in this these were conducted within the Graduate School for Drug Exploration (GUIDE), Center for Liver, Digestive and Metabolic Diseases (CLDS), Department of Pediatrics, University Medical Center Groningen, University of Groningen, The Netherlands

Funding

The studies described in this thesis were supported by grant 2003.00.009 from the Dutch Diabetes Foundation, Amersfoort, The Netherlands

Printing of this thesis was financially supported by

Diabetesfonds Nederland, Amersfoort, The Netherlands

Rijksuniversiteit Groningen, Groningen, The Netherlands

Universitair Medisch Centrum Groningen, Groningen, The Netherlands

Graduate School for Drug Exploration (GUIDE)

Nederlandse Vereniging voor Hepatologie, Haarlem, The Netherlands

Sigma-tau BV, Utrecht, The Netherlands

CONTENTS

CHAPTER 1

General introduction 9

CHAPTER 2

Fish oil potentiates high-fat diet-induced peripheral insulin resistance in mice 19

CHAPTER 3

Pharmacological inhibition of the acetyl-CoA carboxylase system by CP-640186 improves peripheral insulin sensitivity in mice 39

CHAPTER 4

Soraphen, an inhibitor of the acetyl-CoA carboxylase system, improves peripheral insulin sensitivity in mice fed a high fat diet 55

CHAPTER 5

Inhibition of carnitine palmitoyltransferase 2 by aminocarnitine prevents ketoacidosis in a mouse model of type I diabetes: a metabolomic approach 73

CHAPTER 6

Mice heterozygous for CPT1a-deficiency show only subtle changes in fat and glucose metabolism upon feeding a high fat diet 89

CHAPTER 7

Regulatory enzymes of mitochondrial β -oxidation as targets for treatment of the metabolic syndrome 105

CHAPTER 8

English Summary 130

Nederalandse samenvatting 131

Dankwoord 133

Curriculum Vitae 134
