Acknowledgments

The prelude to this thesis started long time ago after seeing a small announcement for a new course in Genetics on a message board at the school where I was deeply studying... Math and Physics. The topic looked so fascinating and challenging to me, that I immediately decided to subscribe for the course, and genetics became my ‘big’ topic of interest ever since. Today, this long journey reached a landmark. Certainly, this dissertation would not have been possible without the support and help from many people in many different ways, and now it’s time to thank all those who supported me during some stage in this process.

First and foremost, I would like to express my gratitude to my promoters, Marten Hofker and Cisca Wijmenga. Dear Marten, I am very grateful for the opportunity you gave to me to return to science – first to work as a volunteer. Ever since this moment you have been supporting me and allowed me to grow and develop as a scientist. Because of your guidance I have learned the major scientific ‘rules of thumb’: whether it is about how to approach a scientific problem and to ask critical questions or whether it is about making the right choices for a career. And thanks a lot for teaching me to see the opportunities, to focus on one topic instead of spreading my attention on too many of them and for pushing me to be persistent to reach my goals.

Dear Cisca, it was a great pleasure and a big challenge to be your PhD student! Thank you for all your valuable comments and encouraging advices, for your critical questions which often stimulated me to think “outside the box”, for -almost- always having time to answer any of my questions. I greatly admire your efficiency, your decision-making skills and your ability to solve problems. They are great examples of skills for me to achieve.

Also I would like to express my gratitude to Prof. A.K. Groen, Prof. H. Snieder and Prof. Y.T. van der Schouw for being a member of the reading committee of my thesis.

Next, it should be recognized that part of the success of this thesis was due to the cooperation and collaboration of the members from our “IOP” group. It was a great pleasure to be part of such excellent team of colleagues First, I would like to express my sincerely thanks to Prof. G.J.B. van Ommen and other members of our “Begeleidingscommissie (BC)” for their support and for their helpful and positive
feedback on our research (and also for being patient with our habits to send the abstracts just before the submission deadlines). Dear Annelies and Tonnie, thank you for your kind help and support of our group. I deeply appreciate the contacts with the team from Utrecht University. Dear Yvonne, thank you for your advices, very helpful insights, friendly comments and good humour. Dear Timon, your wide knowledge of the pathogenesis of type 2 diabetes was a great support for me, I appreciated a lot your contribution to all our manuscripts and also our discussions during the NVDO meetings. Dear Charlotte, I have learned a lot about statistical analysis from you, thanks for all your constructive comments and help during the preparation of the original articles. Dear Clara, it was great to meet you during this project, you since have became a dear friend. During these four years we had a lot of inspiring and brainstorming scientific discussions and warm private talks. Sterkte with finishing your thesis and moving to America (a lot of success to you and Bart there)! Dear Florianne, it was nice to work with you, good luck with finishing your PhD! Paul, during these few months you stepped in, your expertise and fresh ideas, as well as speedy way of working and your wide network contribute a lot to our CardioChip project. I would also warmly thank my colleagues from Maastricht University for our fine collaboration. Dear Prof. Buurman, dear Wim, your insightful remarks and your constructive criticism have always initiated interesting scientific discussions during our IOP meetings. Also it was a big pleasure to have short chitchats with you in Russian. Dear Sander, thank you for all your help and fast replies to any of my questions, your enthusiasm for our collaborative project was encouraging.

Next, I like to thank all my present colleagues from Molecular Genetics. Three years ago I moved to Groningen and I was warmly welcomed here by my new colleagues. Dear Elinda and Niels, it was very-very empty in the lab then. Thanks for all the great job you did and efforts you made to organize the labs! Elinda, good luck at your new job! Dear Marijke, my heartiest thanks to you to step in and becoming my paranimfe. Your help and your words “Everything will be OK!” during these last hectic weeks of finishing the thesis were highly appreciated! Dear Ingrid, thanks for your indispensable help with dealing with all administration and bureaucratic matters, for keeping track on the deadlines and for always having time to just listen and to help! Dear Bart and Debby, it is a great pleasure to have you as my colleagues, thank you for your scientific (and not only) feedbacks to any of my questions. Dear Marcel, I was glad to finally have a ‘genetic’ buddy among our ‘mouse’ people with whom it became possible to discuss a new publication in Nature or the problems with DNA isolation. Dear Pascal, thanks a lot for your help with sending these 50 letters! A lot of success for your own promotion
and research! Dear Anouk and Marcela, although we focused on totally different topics of research we could always talk, about all kinds of things. New AIO’s - Fareeba, Nanda, Paulina and Tobias - it was a pleasure to share the ‘AIO’- room with you. I like to wish you all a lot of success with your PhD research! Dear Daphne, Henk and Nicolette, it’s very nice to have such nice and friendly colleagues. Also, I would like to thank here Ron Korstanje and Lottie for all their help on different issues during that period when I was travelling between Groningen and Maastricht. Your help was a big support during that crazy period! Elena, it was a special time when three of us (you, me and our dearest Giuseppe who passed away so unexpectedly) were sharing the room and had lots of fun and interesting conversations. Good luck with finishing your thesis and passing your exams!

Next, I like to warmly thank my colleagues at Medical Genetics. Dear Jackie, I am tremendously grateful for all the time you have spent on editing and correcting our manuscripts! It’s always a great pleasure to talk to you and to have your friendly advice on scientific or every day life issues. Dear Agatha, Asia, Gosja, Jihane, and Noortje, it’s absolutely cool to work with you! Not only because I know that I can rely on your help, whether it’s about finding master mix that finished, or problems with data extraction from a large ped-file, but also because of all our talks about everything and of having a lot of fun together in Groningen, Rolduc, Barcelona, and Cambridge Dear Dineke and Monique, thanks for your help and your advice during my first in situ rounds in Groningen. Dear Cleo, thanks for your help with the DNA and with the analysis, our KCNQ1 paper on its way. Dear Lude, your enthusiasm about research and your interests made our conversations inspiring and very challenging. Dear Jingyuan, your comments and remarks during the EPI meetings were always very helpful. Also, many thanks to Marcel, Mathieu, Elvira (an amazing woman who passed away so young!), Ron and Pieter for all their kind help in the lab.

Also, I want to express my sincere gratitude to all my ex-colleagues at Maastricht University. During the period I have been working with you I learned a lot about my new country and its people. First of all, I am most grateful to Ronit. Dear Ronit, with the great appreciation I like to thank you for all what you have done for me! From the beginning you had complete trust in my potentials and motivations, your generous support and great encouragement played a very important role in my first steps after returning to science. Later on we became good friends as well, who can always talk and discuss any problems. I wish you all the best in your career! Next, I would like to extend
my thanks to Patrick and Monique who taught me how to work in the lab, after all that long period of being out of the lab. Thanks to your valuable advices and teachings I could restore all forgotten laboratory skills. Next, I would like to thank Wilma for all the help with any administrative issues and for her friendship; it was my pleasure to work with you, to have our nice talks in the train! Dear Daphne, Kristiaan, Mathijs, Petra, Stijn, it was a pleasure to meet you in that busy and noisy ‘AOI kamer’! I enjoyed all the fun and all the talks we had a lot! Kristiaan, I miss your jokes (and your teasing of course). Dear Anne, thank you very much for all your help, a lot of success in your career as a doctor! Collective acknowledgments are also owed to my colleagues - Arjan, Claudia, Celine, Danielle, Ellen, Frank, Guillaume, Hanneke, Iris, Inge, Jan, Joost, Le, Marion, Maurice, Menno, Mohammed, Pieter, Remco, Raymond, Susan, Sofia, Veerle, Vivian, Will, Willem, it was a pleasure to work with you!

Besides my colleagues from Groningen and Maastricht, I also wish to thank all the people from the Complex Genetics Group from Utrecht University. First of all, my heartiest thanks to Sasha. Dear Sasha, our meeting played an absolutely ‘serendipitous role’ in my return to science. After a few years of unsuccessful job hunting in a new country, your kind advice to take a volunteer position and bringing me in contact with Marten and Ronit became a break point in this frustrating process. Since then you have always being open for any support (whether scientific or philosophical). Thank you for all that! I would also like to thank Alrienke (thanks for all the files and plates with DNA, arranged in ideal order), Bobby (your cheerful explanations of very complicated statistical issues contributed a lot to my understanding), Eric (sincere thanks for your kind help with pipeting 100 384well plates!), Begoña and Dalila (was always very nice to talk to you, good luck in your scientific career!), Behrooz (you are now working at UMCG, good to see you at EPI department), Martin (it was always inspiring and enlightening to talk to you), Marianna (it was absolutely great to meet you there! I hope, that one day Yura and you will finally visit us in Groningen), Alfons, Ruben and Caren (my thanks to three of you for your always friendly help to show me what is where in the lab).

Also, I wish to acknowledge many other people from UMCG. I owe my sincere gratitude to Prof. H. Snieder. Dear Harold, from our first meeting in Maastricht it was always a great pleasure to work with you! I am deeply grateful for all your valuable and insightful comments and feedbacks, for your open way of working with young scientists and your support. I am looking forward to continue our collaboration! Dear Prof. Stolk, dear Ronald, thank you for your help and for your support at the SHARE research school.
Dear Prof. H.M. Boezen, dear Marike, thank you for our very nice and easy going collaboration, your statistical advice on the KCNQ1 analysis was very helpful. Dear Eva, I still remember our meeting during master class by Prof. Yudkin, thanks for all your advices and tips! Dear Prof. R. Vonk, thank you for our fine collaboration. Dear Ewa, I am truly enjoying to work with you, thank you for your interest in my project. I hope we can publish a nice manuscript soon. Also, I like to express my gratitude to Prof. Gerjan Navis and Stephen Bakker. Thank you for your valuable comments that help us to see a clinicians point of view in our genetic research. Dear SHARE people, Truus and Renate, I would like to thank you for your friendly help with all the administrative work. Truus, your support in PubMed search was a great help to perform a comprehensive literature search for my review. Dear Feste, a lot of thanks for your IT-support and trouble-shooting.

Next, I would like to acknowledge all the people with whom I had very nice and fruitful collaborations during these four years of my PhD period. Dear Leen and Erwin, it was absolutely a great pleasure to work with you on all our projects! I enjoyed your active input, fast responses and straightforward way of working! Also, I wish to express my gratitude to Prof. J.M. Dekker and Prof. G. Nijpels for the collaboration in the KCNQ1 project. My acknowledgments are also owed to the people from the Zwolle Diabetes Centre – Prof. H. Bilo, Nanno and Gijs. My sincere thanks for our very fruitful and successful collaboration, it’s a great pleasure to work with such enthusiastic doctors with a broad interest in research. Next, I would like to thank Steven Meex for a nice collaboration. I wish you a lot of success in your research! I would like to extend my acknowledgments to Patrick Lindsey (thanks a lot for your statistical expertise and the help in our TUB project) and Olaf Klungel (thank you for the excellent collaboration and for providing the additional samples of type 2 diabetes patients).

In addition, I would like to thank all the people I worked with on the projects not presented in this thesis and that have started the last year of my PhD time.

Dear Prof. D. Swaab, thank you for your interest in my proposal and for giving me an opportunity to collaborate with your group! I am highly appreciating this unique chance to benefit from your guidance in the complex physiology of human hypothalamus. I hope that we can collaborate further in future. Dear Unga, my warm thanks for your support and very useful suggestions in the optimization of the in situ and antibody protocols! Dear Ling, thank you for your help with the samples! I also would like to
express my gratitude to Prof. F. Baas. Dear Frank, thank you for giving me the opportunity to perform the in situ experiments in your lab. Dear Kees, thanks to you I discovered a totally new experimental field of in situ, thank for your all your guidance in the lab and valuable advices during my time in Amsterdam!

Dear Prof. M. Kayser, I truly appreciate our collaboration on the population stratification. Thank you for giving me the opportunity to make use of your markers, it was a great pleasure to work in your lab! Dear Mark, your generous support with the protocol was great! Without your kind help I would not be able to finish all the experiments in just a few days (I still remember the amount of the pipetted 384 well plates that should be done!). Dear Kate, thank you for your help with the STRUCTURE analysis. I am looking forward to our further collaboration!

I owe to my warmest gratitude to Prof. P. Talmud. Dear Philippa, it was absolutely a great pleasure to visit you in London. Thank you for your friendly and constructive comments on my research. I hope to we can do something together one day.

I like to thank Dasha Zhernakova for critically reading my Russian summary.

Finally, I like to express my deepest gratitude to the people who played an important role in the very beginning of my scientific career. Dear Prof. Arkady Lvovich Markel, it was a big honour to have you as my first scientific mentor. Your example had a big influence on me, inspiring me to become a scientist. My heartiest thanks for your crucial support during the terrible post-perestroika period which made scientific research in Soviet Union a near ‘mission impossible’ task. Next, I whish to thank a scientific advisor on my MSc thesis, Vyacheslav Adarichev. Dear Slava, finally I can thank you for all your unmeasurable support and help during these two years of research, for your enormous encouragement at the finishing stages of writing a diploma work. Also, I would like to thank Prof. Grigory Moiseevich Dymshits for his astonishing lectures on Molecular Genetics, which had tremendous influence on me. It was a big pleasure to perform experiments at your lab.

And the final words in the end of this work belong to my family.

I feel a deep sense of gratitude to my family in Russia. Мои милые мамочка и родные! Мне бесконечно повезло родиться и вырасти в нашей семье: от Вас я не только
унаследовала волю и характер, но также получила бесконечную поддержку во все трудные моменты в моей жизни. Университетский диплом и моя сегодняшняя научная карьера стали во многом возможны потому, что в те трудные времена вся семья поддержала и помогла. Огромное Вам всем спасибо за это!

My dear daughter, милая Mashenka. В эти сумашедшие годы работы над диссертацией я уделяла гораздо больше времени своим рассчетам и анализам, чем тебе. Спасибо за твое понимание! Я очень горжусь тобой и твоими успехами!!

My dearest Peter, thank you for being with me during this PhD marathon. There are no words enough to express how much I appreciated all your love, patience, unlimited confidence in me, and, of course, your creative thinking that pushed me to look at my research out of my box. You have encouraged me throughout the whole course of my PhD work and gave all the strength and support to finish it. THANK YOU for being in my life!!!

Jana
