ACKNOWLEDGEMENTS

It has been a long way reaching this point in my life. Coming to the Netherlands to carry out my PhD has been a very rewarding experience which would have not been possible without the encouragement and support of my family and friends, co-workers and colleagues, supervisors and senior researchers, and not to forget all the participants. I would like to take the opportunity to thank them.

First and foremost, I would like to thank my mom and my sister, Viola Dotzauer. It is crystal clear that without you, I would not be here right now. You have always encouraged and supported me every step of the way. Words cannot capture my gratefulness. Nadine, I am so glad, I can call you my sister and even though you might not know, but you just being there was many steps of the way such a big help and kept me sane.

I would also like to thank all the subjects that participated in my study. Being highly motivated and enthusiastic, I decided to design a very time-consuming experiment. So, I appreciate the time invested to take a very important part in the experiment. More particularly, I would like to thank all older persons and persons diagnosed with Parkinson’s disease who participated. Before starting the experiment, I was a bit intimidated by the fact that I will be working with persons 65 and older. It turned out to be an exceptional experience I would not want to miss. I am glad I met you all. It was a great pleasure working with you. Thank you!

I would also like to say thank you to Wiebo, Dick, and Simone for your support and contributions. In particular, Wiebo, I really appreciated that you gave me the freedom to work from Berlin every now and then (actually quite often). Dick, I would like to thank you for your bluntness and almost instant replies to questions, request, and inquiries. Simone, some meetings have been extremely tough, but in the end, it was for the better. Thank you!

Moving on to my (close) fellow PhD students here in Groningen: Thialda, Gera, Marjon, Kathi, Christina, Anne, Anselm, and Tessa, thank you all. Marjon, Gera, Thialda, and Anselm, starting our PhD careers in *the darkroom* of the UMCG, I am actually surprised and happy we survived and came such a long way. So, I believe I need to thank Oliver right here not only for getting us out of their and settled into nice and bright offices at the Heymans Building, but also for adopting me and making me part of the group even though officially I was not. Thialda, even though it took quite a long time to realize why
they hired me, I am glad you became my OFF (you still are and always going to be). I do not think I will ever play tennis with M&M’s and a racket made out of wine gummies again. Kathi and Christina, I have learned so much for life. I would have never known what kind of harm free radicals cause and what is classified as the devil’s stuff. You will be on my mind every time I go grocery shopping. Noteworthy to mention at this point are also the unconventionalities: special movies on Saturday afternoons, very special food, and the Komposthaufen. Thank you guys.

Peter, without your help, I would have not been able to do any testing in the driving simulator. All your technical support was crucial for my experiments. Thank you! Along these lines, I would also like to thank Mirte, Bauke, and Yvonne. With your help, it was possible to overcome the language barrier and make recruitment and data acquisition easier than anticipated (Even though, that might have hindered me to improve my Dutch). Rens, thank you for helping out in times when everyone else was tied up. Gloria, thank you for contributing to the project. I would also like to thank everyone else making research meetings an enjoyable change and event learning. I learned quite a lot of things that had absolutely nothing to do with driving. Janneke, thank you for sharing your knowledge on Parkinson’s disease and for your encouraging words now and then. Jolanda, I would like to thank you for staying on top of all the paper work and administrative tasks. Karel and Oliver, I would also like to thank you for your input throughout the years.

Outside the Netherlands, I want to thank my other PhD fellows within the framework of ADAPTATION. Juliane, Claudia, Matthias, Vera, Wilfried, Mercedes, Guilio, Ghasan, Magali, Marta and Veronique (I know, technically you two were not fellow PhD’s), seeing you at project meetings and conferences was always a pleasure and helpful in the course of pursuing my PhD. It was great meeting you all. I also want to thank all senior researchers, especially Professor Krems, within the project. Your input and feedback has been very helpful along the way. And not to forget, "the research leading to these results has received funding from the European Community's Seventh Framework Programme (FP7/2007-2013) under grant agreement n°238833/ ADAPTATION project, www.adaptation-itn.eu".

A lot of times, people do not realize what impact they have or how they might have touched one or kept one sane throughout the years. So there we go with the persons who
made life seem so normal apart from work. I want to thank Rebecca, Robert, Iris, Yvi, Jaime, Leona, Alex, Lina, Juliane, Claudia, Lori, Lara, Diana, Vanessa, Joleen, and Marco. Rebecca, you know, I would have not gone down this alley if it wasn’t for our agreement. Thank you for that and everything else. Robert, thank you for being there ever since high school. Your rational mind has kept me sane so many times. Claudia, the muschel metaphor will never be forgotten as well as all the trips we have been on together. Juliane, we started of colleagues and became good friends over the years. It is amazing how we hardly ever spoke and speak of the process of our dissertations and engaged in normal conversations. But I also already miss our virtual office. Thank you! Lara, thank you for becoming such a good friend. I enjoyed all the times we went out playing, all the Entübungen, cooking, eating, watching stupid TV shows, starring as the Deppen in so many episodes. The list is too long to mention all of it here, but you know what I am talking about. Last but not least, I want to my nieces, Vanessa and Joleen. I always looked forward to coming to Berlin and spending time with you. It was always great to see your joy and light-heartedness. I am happy that in the future time will not be as limited as it has been over the past for years. Marco, thank you for taking such good care of my car, otherwise, going back and forth between Berlin and Groningen would have been quite a challenge.
