Acknowledgements

Referring to my thirteenth “Stelling”: “There is no such thing as a “self-made” man. We are made up of thousands of others. Everyone who has ever done a kind deed for us, or spoken one word of encouragement to us, has entered into the make-up of our character and of our thoughts, as well as our success.” (George Matthew Adams), I want to express my gratitude to all the many people who made this wonderful journey during my PhD possible.

I would like to start with the person who contributed the most to the success of the research described in this book: Prof. Sjoerd Harder, my promoter. For me, it has been a pleasure to have you as my mentor and to be a part of your group. I have learnt a great deal from you, in chemistry as well as on experimental and presentation skills. Our long conversations and fruitful discussions kept me motivated and my research going. It has been an interesting and instructive experience to move labs with you twice and it gave me the extraordinary opportunity to get to know three different universities during my PhD. Next to the scientific experience I also learnt a lot about whiskys, wine, beer and food from you and enjoyed the many barbecues, borrels and conferences we had.

Next, I want to thank Prof. Stephan Schulz and his group for the cooperation we had, first in Essen as hallway neighbors but also afterwards when we had moved to Groningen. I am very grateful that you agreed to be my external supervisor and to be part of my reading committee. Thank you for going through my thesis and approving it for the defense.

Of course, I want to thank the other members of my reading committee, Prof. Adriaan Minnaard and Prof. Thomas Palstra, for reading through my thesis thoroughly, providing valuable suggestions for the improvement, and most importantly, approving it for defense.

Jan, it was a great experience working with you. Thank you for all your support when I started with my PhD project, you gave me so many insights in alkali-earth metal chemistry and I am grateful that I was allowed to continue some of the amazing projects you started. I had a lot of fun with you and I felt like we were a good team in the nine months we shared a lab together.

From my time in Essen, I want to thank Dominik, for being the best friend I had there, for your and your family’s incredible hospitality and that your songs and the Blind Pilots chase away every frustration that one can suffer in research. You always hold a special place in my heart. Many thanks to Lars for your support in the lab and for introducing me to
Eisenpimmel. You can organize the best barbecues and you will make sure that everybody drinks. Thanks for founding the Biber Brüder, they make every concert and festival a night to remember. I wish you, Christiane and Nils all the best for your future.

I also want to thank, Dirk, Sven, Christian, Briac and Robert for the nice atmosphere in the group in Essen and for the quick integration as the only girl in the group. Thank you Ben, Stefan, Raphaela, Sarah, Tamara, Daniella and the whole Schulz group, you were great neighbors. Dennis, you were the first student in my PhD career and next to the experimental work that you did with a lot of enthusiasm you were willing to do calculations for me on the weekends. I am very grateful for commitment and all the support you provided until today. Helmut, you are much more than a colleague from Essen but a good friend until today. Thank you for your generous hospitality everytime I return to the Ruhr and all the fun we had, on concerts, whisky fairs and so on.

When I came to Groningen the first day, Johanne, you were already waiting for me in the foyer. Since then we spend an amazing time together. As my first student in Groningen, we set up the labs and I was so glad, when you returned to do your PhD in our group. It has been wonderful sharing the lab, the office and spare-time with you. Thank you as well for proof-reading my thesis and especially for agreeing to be my paranymph. When you are around it is a guarantee that we will have a blast.

When we were still a tiny group in Groningen, Séb, you joined as the first PhD even if we had to share you with two other groups. You were a huge gain for the group, concerning research as well as personally. We had great times together and when you joined, it started feeling like a real group again. Therefore I am so grateful that I could win you as my paranymph which means that I have an amazing French team on my side. Merci beaucoup!

Harmen, when you joined us after your time in the US, the group won another enthusiastic PhD but more important I won another very good friend. We had so many inspiring conversations and you were so much help, when it came to translate the dutch bureaucracy. Thank you so much for the very thorough and critical proof-reading of my thesis, for all the helpful suggestions and the time you sacrificed for long chemistry discussions. This thesis would not be the same without you. And I don’t know how to thank you for your hospitality all the time I spent working in Erlangen.

Many thanks to Marco Bouwkamp for helping us out when we arrived in Groningen, without your guidance we would have been pretty much lost in the beginning. Also I want to thank Edwin Otten for your helpful scientific advice and readiness for all kinds of discussions. You were a valuable addition to our group and wish you all the best with your own group.
Gradually, our group got bigger and I want to thank Cristina, even if it was only a short visit from Spain, Cédric, and Niels for their contributions to the group. Likewise I want to thank Mu-Chieh and Raquel, it was a lot of fun working with you and I am grateful that I met you.

Over the years, I was fortunate to work with several motivated students. Corinna, you were a huge support on the development of new ligands and with being my student you also became a friend. I am very glad that we are still in contact and manage to meet once in a while. Douwe, next to being very creative in the design of new ligands you were also a lot of help with the organization of the lab. You became a good friend as well, always in for a movie night, a beer or two, and long, interesting conversations.

There were more students that even if they did not work on my projects, contributed to the pleasant and enjoyable working atmosphere: Jurjen, Siebe, Joost, Peter and Marco.

But not only people belonging to my group or working in the same labs made living in Groningen a great experience. Tessa, it was such a fortune that we met in Groningen. By now I call you a soulmate and the best company for all festivals. Thank you for proof-reading parts of my thesis. Adi, you were also one of those persons, you just met and it feels like you have known them for years. Thank you so much for the inspiring discussions about all the world and his brother. Maria-Jesús, we had many great parties at your place and I will never forget our improvisation of milk. Miriam, thank you so much for sharing this great day with me and for all the help you provided to make this day unforgettable.

Giuseppe, the long night of art and science we spent was a lot of fun. Jesús, Santi, Tano, Manuel (“Manolo”), Valentin, thanks for sharing so many impassionate moments at soccer matches and long nights out with me. Claudia, Maria, Danny, Jens, Manuel, Felix, Julia, Ricardo, Bea, Francesca, Titziana, Milon, Pat, Petra, Jorrit and Pim you guys made all the borrels a lot of fun and the best way to spend a Friday night.

But also outside the chemistry world I met some special people that made me feel at home in Groningen. Tom, you were a great neighbor, always willing to help and in for a movie and pizza night, thanks for that. Bodhaditya, it was so nice travelling the long way from Groningen to Frankfurt with you several times and it gave me the good feeling that I was not the only one doing this trip once a month. Jessica, since you came to live with Harmen, you have become a close friend to me. Thank you so much for your amazing hospitality, I enjoyed staying with you a lot.

All this work would not have been possible without the technical support of Oetze, who can fix anything (sometimes even by kicking it), Pieter van den Meulen, who always finds a solution to any NMR problem and Hans van der Welde, thank you for helping me with the DSC and the elemental analysis. Also the assistance from Hilda, Ebe and Alphons is
gratefully acknowledged. Many thanks go also to Dieter Bläser and Martin Lutz for the X-ray diffraction measurements.

And finally, my odyssey led me to another university, namely Erlangen, where I got to meet more interesting people. Christian, with your experience and you passion for chemistry, you are a great gain for the group and it was pleasure to discuss research with you. Good luck with the design of further magnesium hydride clusters. Ursula, Carlos, Anton, it is good to know that our group has such a strong support team at the moment. Benjamin, Andrea, Brant, Xian, Markus and Magnus, I wish you guys all the best for your future and I had a lot of fun with you in Erlangen. Eva, Thomas, Nico, Simon, Tobias, Sascha and Frank, I enjoyed teaching practical courses with you a lot. We had great nights and I hope you will once in a while have a "Möpse-Bier" on the short but fun times we had, I will for sure.

I also want express my gratitude to some people that accompanied my chemistry career before I started working on my PhD. First of all, I want to acknowledge Dr. Pakroppa for fueling my interest in chemistry already at school and therefore being one of the main factors that made me devote my life to chemistry. In the following, I had many inspiring teachers at the University of Oldenburg, Prof. Thomas Müller, who gave me the opportunity to perform my diploma research in his group, Prof. Matthias Wickleder and Prof. Katharina Al-Shamery to name only a few. Thanks to Almuth, Hanno, Robert and Peter for being such good companions on the long way to the chemistry diploma. I wish you all the best for your future. Lars, Steffen and Andre, you were more than just fellow students but also a guarantee for unforgettable parties. Ela and Bianca, I am very grateful I met you and I will always remember the times we spent. A special thanks goes out to Anne, you have been my soulmate and my best friend throughout most of my time in Oldenburg. I will always have a special place for you in my heart of hearts.

Finally, I want to thank my family. Mama und Papa, es fällt mir schwer in Worte zu fassen, wie dankbar ich Euch bin, für Eure Hilfe und Eure niemalsendende Unterstützung. Ich weiß, dass Ihr mich nur ungern habt gehen lassen und dass Ihr immer wieder Opfer gebracht habt um mir zu helfen meine Träume und Wünsche zu verwirklichen. Ohne Euch wäre all dies niemals möglich gewesen.

Meine Oma, und meinem Opa in Gedenken, möchte ich ebenso für Ihre Unterstützung danken. Ihr habt zwar nie viel verstanden von dem, was ich mache und warum ich dazu so weit fort von zu Hause gehen musste, aber Ihr habt immer an mich geglaubt, all meine Erfolge mit mir gefeiert und mich nach jeder Niederlage wieder aufgebaut.

Anyone, whom I missed to thank in the lines above, was only due to oversight. I beg your pardon and express my heartfelt gratitude for all the help.
