Acknowledgements

After more than 10 years in Groningen, the time has finally come to write the last, and probably most difficult, pages of my thesis. All the work that ended up in my thesis (and especially the work that did not end up in the thesis) would not have been possible without the support and suggestions of a lot of great people.

First of all, I would like to thank my supervisor Ben Feringa for his guidance, endless creativity, crazy ideas, support and especially for giving me the opportunity to be a part of his research group. I have been in the lab in Groningen for a while now and it is incredible to see the amount of talent and the number of great people that come to Groningen to work in the group. It was a real privilege to be a part of that.

Next, I would like to thank Adri Minnaard. Adri, your knowledge of organic chemistry really is astonishing! Thank you for the nice suggestions over the years and thank you for being part of my reading committee.

Furthermore, I would like to acknowledge the reading committee, Prof. Hans de Vries, Prof. Véronique Gouverneur and Prof. Adri Minnaard for their quick correction of the manuscript and their kind suggestions.

I would also like to thank the ‘unofficial reading committee’: Martín, thanks for reading my chapters and for your feedback. It was a pleasure working with you and I am very happy to have you as my paranimf.

For technical support I would like to thank Ebe (I don’t know what they will do without you around in the lab), Theodora (exact mass, HPLC’s and GC’s), Hans (elemental analysis), Hilda, Monique, and Alphons.

During my PhD I had the privilege to work with a number of talented post-docs and without them this thesis would have been a lot shorter. So, for the work presented in Chapter 3, I would like to thank Tati and Bea. I had a lot of fun working with the two of you, thanks for helping me after I got scooped!

I would also like to thank Alena for working with me on the oxidative cyclization project described in Chapter 4, the initial experiments of Chapter 6 and all the nice dinners!

For the work presented in Chapter 5, I would like to thank the Lithium team: Manolo, Martín, Alena and Syuzi (also thank you for being my co-promotor). After Manolo’s initial discovery, we managed to get all the work done for the paper in about two months! It was a
pleasure working with you! I would also like to thank Wesley for introducing me in to the world of Raman spectroscopy, an essential part of Chapter 7.

For all the useful suggestions and funny meetings I would like to thank the entire Subgroup Asymmetric Catalysis. It didn’t matter if we were with 5 people or with 17, I don’t think we ever finished within two hours.

Next, I would like to thank Adi and Ashoka for being great friends, for drinking coffee (tea) with me in the new building, providing access to the labs in the weekend and organizing a great trip to India! Also thanks to Johannes and Judit, Bjorn and Suzanne, Alena, and Lachlan; it really was an unforgettable trip.

I also had the pleasure to be part of the organizing committee of the infamous workweek 2009. Johannes and Lachlan, thank you for all the great evenings we had beforehand and even though it was the only workweek in the last ten years that stayed in the Netherlands, I think we did a great job. Johannes, thank you for being a good friend and for being my paramimf!

I would also like to thank the members of the football subgroup, FC Venus ’69. I had a great time playing football with you guys (and girls) and I promise I won’t kick the ball over the fence anymore.

And these acknowledgements would not be complete without thanking the members of the pubquiz team: Pimpmaster Fred and the Magic Sticks! I had a great time winning lots of useless stuff/drinking beers and I would like to thank all the members: Jochem, Jos, Lachlan, Wiktor, Anouk and Johannes.

Also a big thanks to Lorina for all the dinners/housewarming parties, our trip to California (Gambling in Las Vegas!) and Albania (Tirana center!) and your friendship. I would like to thank Jack & Megan for their friendship and Jack for the useful discussions about the autocatalysis project.

Being in the lab for four years means having a lot of labmates. So first of all I would like to thank all my labmates from 14.223N (in completely random order): Nop, Bjorn, Nataša, Celine, Bin Mao, Tatsuo, Martin, Yange, Stella, Francesca, Aike, Yi Ning, Maria.

I would also like to thank the neighbors from 14.223Z (for making our lab look good ;)):
Jack, Tim, Tati, Toon, Bea, Artem, Lachlan, Massimo, Manolo, Wim, Anouk, Valentin, Petra, Anne, Stefano and the people from the Roelfes group (Lorina, Fiora, Rik, Jeffrey, Almudena, Massimo and all the others) Furthermore, I would like to thank the ‘old’ Vyscom lab and all its inhabitants over the years: Bas, Thomas, Tieme, Johannes and the
'new' vyscom+ in the new building: Adi, Ashoka, Danny, Milon, Kiran, Jeffrey, Peter, Manuel, Santi, Bea, Felix, Claudia, Tiziana, Wiktor. Also a big thank you to all the members of the Stratingh Institute that I forgot to mention!

A big thank you to all my friends outside the world of chemistry: Hans & Ypie, Inge, Peter, Lourens & Sandra, Luuk, Deck, Frank & Esther, Tim, André, Nienke. Although you probably don’t know what I’m doing in the lab, you support has been invaluable! I would also like to thank the best French guy I know: Pierrick. Thank you for your friendship and all the great trips we’ve had! yec’hed mat!

Thank you Robert, Christl, Malcolm, Colin and Frances for accepting me as part of the Camduyns and for introducing me to Canadian culture.

Graag wil ik mijn familie bedanken voor de constante steun: Pap&Mam, Ik ben heel erg trots om jullie zoon te zijn. Bedankt voor alles! Evert, bedankt voor je steun en ik ben trots dat je zo hard studeert. Verder wil ik mijn beide Oma’s bedanken. Ik ben heel blij dat jullie er deze dag bij zijn!

I would like to thank Lachlan. Starting our Phds on the same day and finishing on the same day, that can’t be a coincidence. Thanks for all the support and the wonderful experiences we shared! I am really excited to start our adventure on the other side of the world with you and I can’t wait to see what the future will bring us!

Pieter
