## Acknowledgements

First of all, I would like to thank my primary supervisor professor Douwe Draaisma. After an informal chat in a café in Groningen, he offered me a small position at the Theory and History of Psychology Department at the University of Groningen. This position gave me the opportunity to combine working as a psychiatrist with doing the type of historical and conceptual research I aspired to do, within a stimulating and unique multidisciplinary department. From the very start, professor Draaisma has been a steady support in my struggle to make sense of the history and science of autism.

I have been exceptionally fortunate to be supervised not only by him, but also by another prominent Dutch academic and celebrated author of important books on the interwovenness of psychiatry and society, professor Trudy Dehue. Her work provided me with numerous significant and original perspectives on contemporary psychiatry. As a Dutch psychiatrist I am very happy to notice that her contextualizing and historicizing approach to mental ailments is no longer feared and resisted by many of those in the field, but is increasingly appreciated and internalized by Dutch psychiatry. Both my supervisors have been invaluable sources of inspiration and motivation for developing my own thoughts on the science and practice of psychiatry. They underpinned and sustained my commitment to understanding mental health problems as problems of entire human beings in complex worlds and not merely as problems of human bodies and brains.

Many others have made a contribution to this dissertation. Various anonymous article reviewers are gratefully acknowledged for sharpening my analysis with their remarks and thoughtful suggestions. I am also very grateful to Des Fitzgerald and the following participants of the Theory and History of

Psychology Forum meetings at the University of Groningen for taking a lot of time and effort to improve my preliminary manuscripts: Carlos Baum, Jonna Brenninkmeijer, Jessica Cadwallader, Maarten Derksen, Robin Rymarczuk, Felix Schirmann, Stephan Schleim, Hilde Tjeerdema, Martijn Wit, and of course, Trudy Dehue and Douwe Draaisma.

I would also like to thank Dominic Murphy for welcoming me as a research visitor at the History and Philosophy of Science Unit at the University of Sydney. Despite all the attractions of living in the beautiful city of Sydney, I was able to make valuable progress on my dissertation during my months at the University of Sydney. Cycling to the beautiful campus at 7:00 AM for a focused day of writing, and joining my family in the afternoon for a swim, some desperate attempts to surf, and a barbecue at Bronte Beach was an *awesome* experience I will never forget.

The Philosophy Department at the University of Amsterdam is also thankfully acknowledged for accepting me as a visitor and for providing me with a perfect place to work close to my house. The fellow PhD candidates at the UvA, Martin Boeckhout, Guus Dix, Pim Klaassen, Floortje Moes, Lukas Verburgt, Sara Vermeulen and Willemine Willems, are all thanked for the discussions and many lunches we had. In particular, I would like to thank Pim Klaassen. As the teacher who introduced me to the work of Ludwik Fleck and Nikolas Rose during my Master's in Philosophy; as the colleague who introduced me to the Philosophy of Science Unit at the UvA; and now as a good friend and neighbor at 'Camping Geversduin,' Pim has been of immeasurable value. It is not putting it too strongly to say that, in many ways, this dissertation would not have been possible without Pim's enthusiasm, generosity and intellectual input.

I also owe much to Maria Kamphuis for correcting my persistent grammatical errors and badly written sentences. Writing in English remains a struggle for me.

Furthermore, I want to thank my wonderful parents Pom and Guus, who have been extremely supportive in multiple ways. Throughout the years, they have always encouraged me to do the things I considered important and they have always showed confidence in the decisions I have made. And, of course, the many days they have babysat my children have been (and still are) priceless. Further, for many unexpected hours of babysitting – before unavoidable deadlines and lectures – I am also indebted to my mother-in-law Marieke, my

sister Emma, my brothers Otto and Stijn, and my (future?) brothers and sisters-in-law Peter Paul, Luc, Kristina, Nathalie and Annet.

Finally, there is, of course, my very dear and wonderful wife Paulien. Even at times when I was hardly able to explain what it was that I was analyzing, not to mention the practical implications of it, she had faith in the project's significance and positive outcome. Throughout the years, Paulien has always been there for me and I also thank her for our children, Elin and Leonard, the most beautiful little creatures one could desire. These little ones helped – and more often forced – me to take some distance from my work. Above all, they made me realize that compared to all the amazing things a child is able to do in the first five years of her life, this five-year project is a rather dull achievement.
