## Colophon

This PhD project was carried out at the Centre for Isotope Research (CIO), which is part of the Energy and Sustainability Research Institute Groningen (ESRIG) of the University of Groningen, the Netherlands.

This PhD project was funded by the CATO-2-program. CATO-2 is the Dutch national research program on CO<sub>2</sub> Capture and Storage technology (CCS). The program is financially supported by the Dutch government (Ministry of Economic Affairs) and the CATO-2 consortium parties.
