Acknowledgments

There is a kind of tradition that the person who is closer to the one writing the acknowledgments is mentioned last, in a sort of rising climax. However, I would like to invert this order for once and that is the reason why I would like to thank you, Ugo, as the first person I mention here. Grazie per essere la persona che sei, per la tua incredibile capacità di rendere uniche e meravigliose anche le più piccole cose. In questi anni sei stato il mio specchio, per ricordarmi chi sono, da dove vengo e tutti i principi in cui creo anche quando le circostanze me lo hanno fatto completamente dimenticare. Non ti sarò mai abbastanza grata per questo.

Anna, you took care of me since the moment I arrived in Groningen (even before then, I must say), both scientifically and personally. Professor Klebe told me once that he will never forget his first PhD student and he is sure you will never forget yours. Well, given that it is me, I hope you will have a good memory of the time we spent together.

Adri, thanks for always finding the time to discuss scientific and non-scientific matters, despite your busy schedule.

I would like to thank the members of the reading committee, Prof. Wesley R. Browne, Prof. Frank J. Dekker and Prof. Caren L. Freel Meyers, for their useful comments and suggestions.

I have been involved in many collaborations throughout my PhD and I learned a lot from each person I have been interacting with. Jens and Philip, thanks a lot for all your efforts on the DXS project and for your patience in explaining me all the details of the STI methodology. Prof. Griesinger, thanks for taking an active part in the project. Alessio, Diego and Prof. Hermann: within our collaboration for the phage display project I learned a lot of new things related to biology. Alessio, we shared the pain of a very challenging project (and a lot of reformatting moments too!) but I am sure we will get through this! Prof. Dömling and Kareem: your enthusiasm on our project was contagious for me, and despite the challenges we faced, I am sure that we set the basis for some interesting research to be carried out. Silvia, thanks to you too for contributing to the MCRs project with your dedicated synthetic efforts. Céline, our collaboration was extremely efficient and although we never met, I have the feeling we know each other pretty well. Thanks to Prof. Reymond as well for his fruitful feedback. Prof. Freel Meyers, Alicia: you were precious to me. You have been always available to discuss, clarify my doubts in detail with your admirable expertise in the field. Despite not being part of this thesis, I enjoyed collaborating also with you, Sebastian and Prof. Börner.

Moreover, I would like to mention Prof. Wrengler and Kamila for the preliminary studies on *Plasmodium falciparum*, Dr. Illarionov and Prof. Markus Fischer for providing us with the protein and with the setting up of the biochemical assay, and Dr. Kontoyianni for the *M. tuberculosis* DXS homology model development and validation. I would also like to thank Tridia van der Laan for the cell-based assays with *Mycobacterium tuberculosis*.

Among the people who helped me throughout these years, I would like to mention a few. Martin, you are a passionate scientist and I really appreciated your availability to always take the time to deeply discuss any problem I have had with my projects. Wiktor, your scientific knowledge is as deep as the sea (I am sure you will appreciate the comparison!). Renata, it has been a pleasure to host you in Groningen and you can’t imagine how much
I missed you! Thanks also to all the technicians, particularly to Theodora and Pieter and to Hilda, Cristina and Alphons for their support with the bureaucracy.

When I started my PhD, I arrived in Groningen and I did not know anybody. It would be pretty stupid to hide that I was bloodily scared. However, few people made me not feel alone anymore and I will never forget this. Franci, sai bene quante cose io e te abhiamo condiviso nei nostri percorsi quasi esattamente paralleli, ridendo, piangendo e ballando (tantissimo!). Miri, my German friend with an Italian soul, you are a milestone of my stay in Groningen. I knew I could always come to speak to you and you could take the time to listen, understand my feelings. Julia, thanks for not being a chemist and surviving our extremely boring and neverending conversations about chemistry and security in the lab. Céline, Mathieu, Felix, Séb, I will never forget all the trips, dinners, parties that we enjoyed together. Felix, I also really enjoyed our time with the Monday Milas, we were a great team! Blijkje, you have been my group for almost my whole first year, given that we used to work kind of isolated from the rest of the group. We learned so much together and you were extremely fundamental to overcome my biochemistry crisis! I am sure we will always keep in touch, no matter where life will lead us.

During my second year, I could enjoy being part of a group of smart, funny, brilliant people and I appreciated how much this means for one person’s scientific and personal development. My three favourites post-docs ever: Cati, you are a brilliant chemist and an amazing teacher. Thanks to you and Gerald for taking care of me during rainy, cold Sunday afternoons in Groningen. Santi, how can I forget your absolutely brilliant craziness? Kiran, our lives crossed only for one year, but it was a very intense one, and one of the best time I had in Groningen. Working close to you was truly inspiring (still I do not get how it is physically possible you could perform so many columns in only a few hours!). Felix, Danny, Ashoka, Adi: it was a pleasure working with you and I am sure each of you will have a successful scientific career!

I had many students throughout these years and thanks to them I learned to organize my work better and deal with multiple projects at the same time. I would like to thank, in particular, Matthijs and Daphne, for their enthusiasm and their willingness to learn as much as they could.

Yagiz, Jonas, Alwin: when I thought I had almost finished my PhD and could not make friends anymore, you guys, jumped in. Jonas, thank you for making the last period of my PhD much less stressful. You made me laugh so much but we also shared many serious talks and I felt I could really rely on you.

I want to thank Claudia and Milon, two of my dearest friends and my paranymphs. Claudine, quante risate ci siamo fatte per sdrammatizzare i momentacci, non ce l’avrei mai fatta senza di te nel green building. Grazie per la tua capacità di farmi vedere le cose da punti di vista diversi, mi ha aiutato in tantissime occasioni. Milon, you are not a “kiddu” anymore, but I still feel you are the younger brother I have never had. I will never forget our memorable trip to India and I hope there will be many more in the future. Amar pokkho theke Chandrima r tomar poribar er jonno all the best.

Having a lot of Indian friends, I felt deeply part of the amazing Indian community. Asish, Reema, Suresh, Vijay and everybody else I met at numerous Indian events I have joined: I will never forget you, guys!
It was really great to meet so many international people, but it was nice to feel home sometimes. Therefore, I would like to thank a few members of the Italian crew in Groningen: Francesco Mecozzi (il mitico Mec), Tilde, Giulia, Ciccio, Manuela, Romina, Rita, Nicola, Patrizio, Mattia, Davide. Massimo (Volpe), sei stato una parte essenziale del mio periodo a Groningen e grazie a te l'Italia mi è mancata un po’ meno in questi anni!

There are many other people I would like to thank: Matea, Krzyś, Pat, Massimo, Pablo, Anne, Johnny, Sabrina, Piotr, Valentín, Elena, Richard, Zhaong Tao, Niek, Melanie, Judy, Michael and Mickel, Gosia, Edwin (my MCRs expert!).

Vorrei ringraziare tre dei miei migliori amici di sempre: Robbi, grazie per essere sempre stato felice di rivedermi quando tornavo in Italia. La mia amica green Maria, con cui condividere le reciproche follie è sempre un piacere. La mia alzatrice preferita Sara, con cui ci vediamo troppo poco.

Giacomo, grazie per aver disegnato la splendida cover della mia tesi. Dr. Moschini Jr., grazie per tutte le consulenze in ambito medico e biologico relative alla tesi!

Mamma, so che non è stato facile per te vedermi andare via, ma ti ringrazio per il tuo sostegno a distanza in tutti questi anni. Infine, dedico questa tesi alla persona che da sempre mi motiva ad essere la persona che voglio essere, senza compromessi. E la dedico anche a me, perché sono fiera del lavoro che ho fatto in questi anni, e voglio potermelo ricordare in ogni momento della mia vita.
