Acknowledgements

Growth, both personal, professional, as well as scientific, is only achieved by external influence. These external factors are the people you work with, the people you meet, that change your life, or the situations that you encounter. During four years of research, it is only natural that someone encounters all these different factors, and that these encounters make the person to who he or she is now. Of course this was also the case for me and hereby I would like to thank those who helped me grow throughout my PhD.

A PhD-student is, as the name implies, only a PhD-student if there is a PhD position. I would therefore like to begin by thanking Paul Blom, my supervisor, for providing me with this opportunity. Without him I would of course never have started in the ME-POS research group in Groningen, and I would never have had the chance to gain this beautiful experience.

I then would like to thank Jasper Michels, my daily supervisor, for both his professional as well personal support in my PhD-project. Jasper, roughly one year into my PhD project you visited me in Groningen and shortly after we decided it would be best for me if I performed my research in Eindhoven at Holst Centre. From that moment you became my de facto daily supervisor, although in theory you were of course my external supervisor. You helped me with the writing of my articles, joined me with trips to various conferences, and always had an open door (and ear) when I couldn't figure something our, or if something troubled me. I think that a simple ‘thank you’ does not convey how much I appreciated working with you.

I further would like to thank the entire former ME-POS research group in Groningen for the fun, friendly, and gezellige atmosphere. The Blom-group in the Netherlands reaches its end with me and Davood, but it is nice to see that some former PhD-students continue with Paul and Jasper in Mainz, and that the group there is also slowly growing. Without the nice ME-POS environment that you guys (and girls) created I probably would never have decided to start as a PhD-student in Groningen. I’d especially would like to thank Davood, my last colleague in the ME-POS group, for being my paranymph.

After leaving Groningen, I of course met a lot of different people at Holst Centre in Eindhoven, who also taught me a lot, or enabled me to learn new things. I’d therefore would like to start by thanking Pim Groen for granting me access to Holst's cleanrooms. My research was fully dependent on access to their cleanrooms, so it was very nice that I had a blanco access card to the cleanrooms, while others of Holst were not allowed to enter. Of course I would also like to thank the employees of PINS (Philips), because they
also played a role in allowing me access to their cleanrooms.

Since many former ME-POS colleagues started to work at Holst Centre, I encountered quite a few former colleagues during my time in Eindhoven. Therefore I'd like to thank Hylke, Herman and Date for their assistance during my time at Holst. It is always nice to have people that you can easily walk up to, who can help you when you have some questions or when there is some small technical challenge that you can't seem to get the hang of. Of course they were not the only ones who I could contact, meaning I also learned a lot from my other colleagues at Holst Centre, who are again too many to name. However, I would like to especially thank Edsger for his involvement and assistance with my final two articles and Charley my fellow "phd-student of Jasper", for the nice coffee/tea/lunch-conversations. I'd off course also like to thank him for being one of my paranymphs.

I'd like to thank the employees of PINS for their aid in the cleanrooms. I'd specifically would like to thank George for his assistance and many conversations. Of course I would also like to thank Ton v.d Biggelaar for performing many of the evaporation procedures that I required for one of my articles, and of course for the fun conversations about work, the swimming team I used to be in together with his son and daughter and many other things.

During my research I also met many people from other universities. Both during the writing of articles (Lourens, thanks!) as well as during courses and summerschools. There are too many people to list that I met during these courses and summerschools, but I would like to thank everyone from the IOP Self-Healing material summerschools for their involvement, for without you guys/girls it would never have been as much fun.

Sybrand, as chairman of the IOP Self-Healing materials, you of course played a large role in creating the fun summerschools (together with Annette: Annette, thanks!) and the self-healing themed symposia. I'd like to thank you for doing that with such enthusiasm, and would also like to thank you for being a member of the reading committee.

I of course also would like to thank Ruud Schropp and Kees Hummelen for serving in my reading committee, and taking the time to read my manuscript.

I'd like to acknowledge the IOP self-healing materials, the Zernike Institute for Advanced Materials, the European Community's Seventh Framework Program for financial support. I'd like to thank Tim van Gijseghem (AGFA) for supplying me with a special grade of PEDOT:PSS, and Alex Sieval (Solenne) and NT-MDT for their involvement with my project.

During my research I also had the pleasure of guiding two students. Karel, you were my first master student, and I immediately made it more difficult by moving to Eindhoven shortly after you began. Fortunately that all went well, and we were able to write a nice article. Thank you for your involvement in that work! Anil, I'd like to thank you for your assistance in the work on silver migration. You gave me the chance to test my newly learned coaching-skills, and, although we had some setbacks during the migration experiments, I think we managed to bring it to a nice ending.

Finally, besides those that I met during my PHD, there have also been family and friends that supported and enabled me throughout my PhD to undertake new steps or stood by me when I encountered difficult moments. Them I would like to thank for their support, interest and the moments we shared.
