Table of Contents

Chapter 1: General Introduction	1
1. Stable Isotope Labeling	2
2. Elastin Degradation	5
3. Protein Tyrosine Nitration	7
4. References	8

Chapter 2: Protein Tyrosine Nitration: Selectivity, Physicochemical and Biological Consequences, Denitration and Proteomics Methods for the Identification of Tyrosine-Nitrated Proteins

11

1 Introduction	12
2 Nitration reactions	12
2.1 Tetranitromethane	12
2.2 Peroxynitrite and its derivatives	12
2.3 Other tyrosine nitration pathways	14
3 Selectivity of nitration	14
3.1 Abundance of proteins and of tyrosine residues in proteins	14
3.2 The effect of primary sequence and local environment	15
3.3 Cellular and subcellular localization of PTN	15
3.4 Nitrating agents and selectivity	16
3.5 Contribution of preferential protein denitration or degradation to the overall abundance of PTN-modified proteins	16
3.6 Correlation of <i>in vivo</i> and <i>in vitro</i> PTN	16
4 Physicochemical properties of nitrotyrosine	17
4.1 Effect of nitration on the pK _a of the phenolic hydroxyl group	17
4.2 Spectroscopic properties	17
4.3 Reduction of nitrotyrosine to aminotyrosine	18
5 Biological consequences of PTN	19
5.1 Effect on protein function	19
5.2 Sensitivity to proteolytic degradation	19
5.3 Influence on tyrosine phosphorylation	20
5.4 Immunogenicity	20
5.5 PTN and mitochondria	21
5.6 Implication of PTN in disease	22
6 Denitration	22

7	Analytical methods for the detection of PTN in complex biological samples	24
7.1	Separation and enrichment methods	24
7.1.1	Two-dimensional polyacrylamide gel electrophoresis (2DE)	24
7.1.2	Solution isoelectric focusing / SDS-PAGE (IEF/1DE)	25
7.1.3	HPLC / SDS-PAGE	25
7.1.4	Two-dimensional liquid chromatography	25
7.1.5	Immunoprecipitation / SDS-PAGE (IP/1DE)	26
7.1.6	Immunoaffinity chromatography	26
7.1.7	Chemical modification of nitrotyrosine followed by affinity capture	26
7.2	Mass spectrometric analysis of nitrotyrosine-containing proteins and peptides	27
7.2.1	Matrix-assisted laser desorption ionization (MALDI)	27
7.2.2	Electrospray ionization (ESI)	28
7.2.3	Tandem MS analysis	29
7.2.4	MS-based quantification of nitrated peptides	29
7.3	Application of analytical methods to the identification of nitrated proteins	30
8	Conclusions	36
9	References	38

Chapter 3: Selective Acylation of Primary Amines in Peptides and Proteins **49**

1.	Introduction	50
2.	Materials and methods	51
2.1	Materials and reagents	51
2.2	Acetylation and deacetylation of peptides	51
2.3	Acetylation and deacetylation of myoglobin	51
2.4	LC-MS	52
3.	Results	52
4.	Discussion	58
5.	References	60

Chapter 4: Poly(Ethylene Glycol)-Based Stable Isotope Labeling Reagents for the Quantitative Analysis of Low Molecular Weight Metabolites by LC-MS **63**

1	Introduction	64
2	Materials and methods	66
2.1	Synthesis of PEG-OPFP labeling reagent	66
2.1.1	General Procedure	66
2.1.1.1	General procedure A: extension of the PEG chain by one ethylene glycol unit	67
2.1.1.2	General procedure B: reaction of a PEG chain alcohol with bromoacetic acid followed by acidic work-up	67
2.1.1.3	General procedure C: conversion of the carboxylic acid to the pentafluorophenyl ester	68
2.2	Labeling of a standard solution of amino acids and glutathione	68

2.3	Labeling efficiency as a function of pH	68
2.4	Labeling of amino acids and glutathione in cultured A549 cells undergoing cigarette-smoke-induced oxidative stress	68
2.5	LC-MS	70
2.6	Data Analysis	70
3	Results and Discussion	71
3.1	Synthesis of PEG-OPFP labeling reagents	71
3.2	Quantification of amino acids and glutathione	71
3.3	Evaluation of labeling efficiency	76
3.4	Quantification of intracellular amino acids and glutathione in A549 cells undergoing cigarette smoke-induced oxidative stress	77
4	Conclusions	79
5	References	80

Chapter 5: Chemical Labeling and Enrichment of Nitrotyrosine-Containing Peptides **83**

1	Introduction	84
2	Material and Methods	86
2.1	Materials and reagents	86
2.2	Sample preparation	86
2.2.1	Nitration of angiotensin II	86
2.2.2	Preparation of trypsin-digested BSA	86
2.2.3	Addition of nitrated angiotensin II to the digested BSA matrix	86
2.3	Chemical labeling	87
2.3.1	Acetylation of primary amines	87
2.3.2	Reduction of nitrotyrosine to aminotyrosine	87
2.3.3	Biotinylation of aminotyrosine	87
2.4	Removal of excess biotin	87
2.5	Enrichment of biotinylated peptides	87
2.6	LC-MS/MS	88
3	Results	89
3.1	Nitration of angiotensin II	89
3.2	Acetylation of primary amines	89
3.3	Reduction of nitrotyrosine to aminotyrosine	92
3.4	Biotinylation of aminotyrosine	93
3.5	Removal of excess biotin and enrichment of biotinylated, aminotyrosine-containing peptides	94
4	Discussion	96
4.1	Acetylation of primary amines	97
4.2	Reduction of nitrotyrosine to aminotyrosine	97
4.3	Biotinylation of aminotyrosine	97
4.4	Removal of excess biotin prior to enrichment on a monomeric avidin column	98
5	Conclusions	99
6	References	100

Chapter 6: Study of Human Lung Elastin Degradation by Different Elastases using High-Performance Liquid Chromatography / Mass Spectrometry	103
1 Introduction	104
2 Materials and methods	106
2.1 Materials and reagents	106
2.2 High Performance Liquid Chromatography/Mass Spectrometry	106
2.3 Preparation of elastin digests	107
2.4 Influence of ionic strength on elastase activity	107
2.5 HNE-mediated digestion of human lung tissue	107
2.6 SDS-PAGE / Western Blot with digested human lung tissue	107
3 Results	108
3.1 Influence of ionic strength on the elastolytic process	114
3.2 Digestion of Lung tissue	114
4 Conclusions	118
5 References	119
Chapter 7: Summary and Future Perspectives	123
Summary and Future Perspectives	124
Samenvatting en Toekomstperspectief	127
Synthèse et Perspectives	131
Appendices	135
Appendix 1 : Supplementary Material for Chapter 3	136
Appendix 2: Supplementary Material for Chapter 4	144
Appendix 3: Supplementary Material for Chapter 5	162
List of Publications	165
Acknowledgments	167
