Acknowledgements
I want to take the chance and thank a number of people who significantly contributed to the realization of this PhD thesis, who supported me scientifically and with good advice or who enrich my daily life with their collegiality and friendship. First, I want to thank my co-promotor Luit De Kok for accepting me as his PhD student and Stanislav Kopriva, for initiating and coordinating the BIONUT-ITN in such a professional way. Being not only a member of the Plant Physiology group in Groningen but also of the European BIONUT-network opened many opportunities for me and I could build up contact to other scientists throughout and beyond Europe which will have a significant impact on my future career.

Luit, I thank you especially for your availability as a supervisor, your scientific advice and your excellent eye for details. Also thank you for taking me to Australia and for showing me around at yours and Gerties second home, we had a really good time.

I want to thank my promotor Theo Elzenga for welcoming me in his lab and even at his home, back in the time when I was still a guest student from Frankfurt. As for so many others before and after me it was a first shelter and base camp to discover this amazing and weird country (I still remember how puzzled I was to see that there were REAL wooden Dutch shoes in your garage that are actually used!). Theo, I thank you for your precious scientific and non-scientific advice and support. I also want to thank Arike for hosting me and Jill so kindly (I am still so sorry for having such a hangover at the wonderful Easter breakfast you prepared . . .). I really hope we will stay in contact. And take care of Spin!

This brings me to the second person who hosted me in Haren and, as I am happy to say, became a good friend over the years: Thank you Marten Staal, for teaching me how to MIFE and for being an all-time-available troubleshooting hotline (again sorry for whatsapping you during your vacation in Ireland about the MIFE motor). But most of all, thank you for all the joyful evenings we spent together with good food and beer. Jill and me always felt so welcome, almost like part of the family. Also thanks to you and Joyce for allowing me to take care of your house and cats when you were on holiday – in this way I could turn into a respectable member of the Haren neighborhood, at least for a week. We have not even met half as often as we wanted to, so be aware: Jill and me are going to pop up at your dinner table whenever we are close to Groningen and hopefully Joyce and all your kids will be there, too. Seriously, Marten: Thanks a lot for everything. The decision to appoint you as my paranymph was one of the easiest ones I ever made.

There are more people who facilitated my integration into the Dutch society and customs. Jan Warmink, for example. Thanks for taking me to the yearly sea fishing activity of your village. What was probably meant to be an amusement for
the people from Gieterveen at first place ("Hey, a German joins our trip! He will get so sea sick!"), turned into a lot of fun for me. Not only due to having the first beer at 8 a.m., but mainly because this brought me into contact with Dutch people from outside the university (and because of the second beer at 8.25 a.m.). Of course, our daily highlight is the coffee break at work. It’s always great to meet someone who shares the same kind of humor, especially if a good character is hiding behind it. This is a great bridge to the second member of the Die Woodies Fanclub (sorry Leen, you only count as a passive member): Jan Spoelder, father of a wonderful daughter and 9-10 cats. I was so happy for you and Viktoria when Polina came into your life, I wish your young family all the best, luck and health for the future. I enjoyed it to be involved a bit in your work on plants and their potential endosymbionts, hope it will yield in satisfying results! Talking about collaboration, I want to thank my dear colleague and friend Tahereh Aghajanzadeh. Forever I will remember our trips to meetings and conferences, also together with Omid. Sharing the same fate as PhD students helped a lot and I hope we will manage to keep in contact, scientifically but most of all as friends. The same accounts for you, Dharmendra Prajapati. I wish you all the best with your PhD, maybe one day we can meet again in Gujarat, I loved it there.

Also thanks to my other PhD fellows in our lab: Nana Yu for being a pleasant neighbor in the office, for always creating a good mood and make people smile. Casper van der Kooi for our fruitful collaboration (Chapter 7). Thanks to the other members of Plant Physiology: Jan Henk Venema, thanks for assistance in many cases over the last year, from practical cues in the lab and greenhouse to helping us with the ANWB (after martens had eaten the cables of my car in front of Martens house). And hey, at least one time I joined you for bird watching! Eelco Wallaart, thanks for many interesting discussions, it is amazing how many facts you remind (I was always embarrassed that you knew ten times more about the German history than me). Maria van Leeuwe, thanks for being a good back-to-back neighbor in the office, for many funny conversations about this and that. Jacqueline Stefels, thanks for your scientific input once in a while, we share the same ideas about the importance of physiological research in plant sciences. I am sad that both of you will not be able to join my defense, but I hope you keep your fingers crossed and send some good spirit from Antarctica. Thank you, Ger Telkamp, for solving the many administrative problems but also for many nice chats and your always friendly mood. To Arjen van den Meerakker and Nieck van der Heide, who helped me with measurements and who I was very happy to supervise during their projects. Thanks also to Jannie Nuijten, Leen Villerius, Ika Neven, Wouter Patberg, Muhammad Shahbaz, Fatma Zaki, Bep Stuiver and Freek Posthumus, all of you were nice colleagues. All together I want to thank the whole group for creating a pleasant social atmosphere, which is so important to work efficiently.

And of course I want thank my fellow PhD students and post-docs within the BIONUT Marie-Curie ITN: Mila, Astrid, Ilaria, Patrycja, Giorgiana, Elmien, Moez, Tom and Sarah. Our meetings were so much fun and I hope to see you all again one day and wish all of you only the best for your life and career. Also thanks to the other PIs for organizing the courses and meetings: Agnieszka Sirko, Rainer Höfgen, Gian Sacchi, Rüdiger Hell, Fabien Chardon, Yves Hatzfeld, Stanislav Kopriva and Malcolm Hawkesford.
I also gratefully acknowledge my collaborators and advisors abroad: Thank you, Malcolm Hawkesford for being my external advisor. Your advice helped me to get things organized and your input improved especially Chapters 1, 2, 3 and 6 and the respective manuscripts. I feel that my English writing improved considerably thanks to you and Helen Jenkins. Additionally, I want to thank you for involving me in the review process of journal manuscripts, which was an important experience for me.

I also want to thank you, Michael Tausz, for your input and scientific collaboration from the other side of the globe. I enjoyed it, working on the meta-study (Chapter 7) together with an expert in the field. Also thanks for your motivating input and comments on my work when we met in Creswick and at the APGC meeting in California (when giving a presentation it is always good to have someone in the first rows smiling and nodding!). I also thank Sabine Tausz-Posch for a helpful discussion on my manuscript (Chapter 6). Thanks to all other co-authors of my chapters and articles.

I enjoyed it to be part of the PhD-Team that organized the monthly institute’s lectures: Wen-Juan Ma, Rienk Fokkema, Fons van der Plas, Frank Groenewoud, Serena Donadi, Francisco Dini-Andreote, Stephanie Jurburg and all the others. I am also grateful for the honor of having lunch in the same room (though not the same table) as Richard Dawkins. I feel sorry that some of our questions during the plenary discussion made him a bit angry...

Special thanks goes to Corine Eising, for support in many aspects over the years. Without your guidance through regulations and your engagement it would have been much more difficult to complete my PhD.

Now I also want use this chance to thank the people that were not directly involved in my PhD thesis but nevertheless contributed to its completion by being such good friends. You form the net that catches me after leaving work behind after an exhausting day and your friendship gives me the balance that I need. I thank my good old friends in Frankfurt to which I did my best to hold contact during the last years. The risk to forget someone here is too high, so representatively I want to thank Carsten Deppermann, thank you for being such a good friend since school times. Thanks to you and Ute for choosing me as a best man for your wedding, this was a very special honor. To my study fellows and friends, especially Przemyslaw, Clemens, Tassilo, Vera, Tanja, Stefan and Matze. Thanks to all members of the firebrigade of Niederursel, although I could not see you guys often enough the last years, you still feel like a second family for me. But I also want to thank our new friends in Leer who made us feel at home in Ostfriesland during the last years.
I cannot thank my brother Markus Reich enough for creating the cover for my thesis and the animation and illustrations of the MIFE set-up. Thanks for all the countless times you helped me out with technical and IT problems. It is not for granted to have a brother who shares so many of the same interests and with whom one can talk and laugh about almost everything. The same is of course true for my second brother, Maximilian Reich, thank you also for setting up the homepage of the BIONUT ITN. I furthermore want to thank my talented cousin, Zoë Gillies. Your illustrations between all the scientific writing spice up the whole thesis.

I thank my mom and dad for being supportive and loving parents. You made it possible for me to study and always gave me the freedom and support that I needed. Thanks also to my grandparents, for their never ending interest in what I am doing and thinking. You contributed so much to my personal development that I can hardly put it in words.

I am sorry for all others, but most of all want I thank Jill for being my girlfriend, which is the best thing that could ever happen to me. With you by my side, every experience is more precious and every difficulty easier to cope with. I love you (and thank you for saying “yes” on that balcony in Sicily this summer. It would have been a long second week, otherwise).

Martin Reich, Groningen the 25th of November, 2015
