THE ENDOTHELIUM IN SEPSIS:

inflammatory response and progenitor cell involvement

Neysan Rafat
The research described in this dissertation was financially supported by a grant of the Deutsche Forschungsgemeinschaft (DFG) to the European Graduate College “Vascular Medicine” (GRK880) and by the Groningen University Institute for Drug Exploration (GUIDE).

The author gratefully acknowledges the financial support for printing of this dissertation, given by:
University of Groningen
Groningen University Institute for Drug Exploration (GUIDE)
Faculty of Medical Sciences, University of Groningen
European Graduate College “Vascular Medicine” (GRK880)
Medical Faculty Mannheim of the University of Heidelberg

This dissertation is dedicated to the Bahá’í youth in Iran.

Members of the Bahá’í-Faith in the Islamic Republic of Iran are denied access to higher education due to their religion, regardless of the fact that education is a fundamental human right according to Article 26, paragraph 1 of the Universal Declaration of Human Rights (UDHR), which also Iran adopted in 1948. As such, no Bahá’í youth in Iran would be permitted to conduct such a dissertation. Therefore, this dissertation should be considered on their behalf.
Paranimfen: Shamim Rafat
Dr. Anis Towfigh
CONTENTS

CHAPTER 1.1 General introduction 9

CHAPTER 1.2 Aim of the thesis 42

CHAPTER 3 CO releasing molecules inhibit TNF-α mediated expression of VCAM-1 and E-selectin independently of heme oxygenase 1. (Accepted for publication in British Journal of Pharmacology) 83

CHAPTER 4 Molecular mechanisms involved in the CO mediated down-regulation of VCAM-1 on endothelial cells identified by gene expression profiling. (Work in progress) 107

CHAPTER 5 Increased circulating endothelial progenitor cells in septic patients: correlation with survival. Crit Care Med. 2007;35(7):1677-84. 131

CHAPTER 6 Summary, general discussion and future perspectives 149

CHAPTER 7 Samenvatting 163

APPENDIX Acknowledgements 167
