Acknowledgements
My voyage started when I moved from Timișoara to Bremen, a flat and rainy county, but with warm people. In Timișoara, there are some special people that I would like to acknowledge here and these are Prof. Vasile Ostafe and Acad. Prof. Zeno Simon. Thank you for your guidance during my Bachelor diploma and during my master studies. When I think of Bremen the first images that come to mind are connected with Karen Strenge and Soerge Kelm. Thank you for your patience and for all your support during my master studies. Thank you as well to Prof. Blohm, in who’s lab I learned several DNA-related techniques. The voyage kept a constant line, taking me to Groningen, in The Netherlands, another flat and rainy region. Prof. Paul Luiten guided me and kept my eyes open to channel a diverging research line into a coherent and “round story”. I am grateful that you are my promoter and I appreciate all your support over the years. For your supervision, comments, suggestions, critics, for the helpful tips in the lab, for the scientific discussions and for the long and interesting talks about the origin of different German/English words, thank you, Ulrich Eisel. Thank you as well for offering me a great deal of freedom in thinking and planning the experiments. This freedom, though scary in the beginning of the project, allowed me to mature and to become the scientist that I am today.

I thank the members of the Reading Committee: Carsten Culmsee, Martina Schmidt and Erik Boddeke for their time, effort and fast response. Martina, thank you for your criticism and all your great comments and suggestions. Our ‘baby-manuscript’ discussions taught me a lot. It was a pleasure working with you and I hope that in the future we will extend our fruitful collaboration. Carsten, thank you also for accepting me in your enthusiastic group, for all wonderful discussions that we had and will have.

Special gratitude for a special person, Ingrid, for all her guidance, support, kindness and the insightful discussions we had. The new and elaborate ways of thinking about research planning and implementation you taught me made my scientific life easier. All these were possible after I met you, Ingrid. Thank you for all this and for much more…

Courtesy of the Graduate School of Behavioral and Cognitive Neurosciences (BCN) I could follow interesting courses and meet nice colleagues and future collaborators. Special thanks to the Animal Physiology Department members, from whom I have learned most of the techniques described in this thesis. Eddy van der Zee and Csaba Nyakas, thank you for your comments and suggestions concerning animal behavior experiments. I would like to thank Peter Meerlo for nice suggestions and for our long and interesting discussions. Furthermore, many thanks to Arianna Novati, Girstaute Dagyte, Roelina Hagewoud, Henriette Hulshof, Alinde Wallinga, Dorretta Caramaschi, Deepa Natarajan, Jose Vidal for not failing to make me smile and laugh. Thank you, Joke Poelstra and Henk Visscher for helping me with the papers and travel expenses for the national and international conferences.

Having a nice and smooth working atmosphere in a big lab is always a challenge. However, thanks to Marije Löwik, Jan Keijser, Jan Gast and Josee Plantinga, work-
ing in the lab was quite pleasant. Thank you, Marije, for taking care of ordering and helping me with the cell culture lab. Jan K, always strict in the maintenance of the ‘Western blot’ lab, made working there easier. Thank you also for the technical discussions and for all the work that you put in setting up ‘macros’ for nice but difficult stainings. Jaap Bouwer, thank you for maintaining so many different transgenic mouse lines and for helping me with that very important ‘day 14’ of the mouse pregnancy.

All these 4 years of the PhD period were pleasant and full of nice moments. Thank you to all my officemates, Karin van der Borght, Viktor Roman, Robbert Havekes, Ivica Granic, Timur Cetin and Nikoletta Dobos. Karin, thank you for showing me the nice facet of the Dutch culture and for all the ‘women’ talks we had. Viktor, thank you for all the discussions about adenosine receptors, about paintings and classical music. Thank you for being friendly and making my ‘accommodation’ period a pleasant one. You brought a cheerful and buoyant atmosphere in the room. Robbert, always fidgety and with a very fast way of talking, you brought a restless and creative atmosphere in the room that many times led to lively and insightful discussions. Timur, you amazed me how agile you could be with all the wires. Good luck with optimizing the recordings and hope to see you in Marburg in October. Nikoletta, thank you for the nice painting. I wish you a lot of success in optimizing the protocols for microglia cultures and in getting nice results with them.

Ivi, it was a real pleasure working with you, even when we had our ‘scientific fights’ that often ended in compromises. I can’t help but smiling when I remember your latest request ‘Can I, can I be the first?’ Our ‘V&D meetings’ were very fruitful from a scientific point of view and quite delicious from a culinary point of view. I remember with pleasure how we scientifically matured together and attended all the conferences that we attended. You made me feel welcomed and truly at home during these 4 PhD years. Many thanks for your friendship and, of course, many thanks to lovely Gonzo...

I thank as well all my students: Arlette Kouwenhoven, Hidde van den Akker, Jasper Steggink, Quirine ten Bosch, Thomas Vieth, Wandert Schafsma, Tim de Jager, Bettie Atsma, Wouter Bosma and Peter van der Most. Thank you Marco de Bruyn for your friendship and our long and interesting scientific discussions. It is always fun and challenging to find new bridges between several aspects of science.

I owe special thanks to all the collaborators. The first thank you goes to Knut Biber and his group from the Medical Physiology Department, University of Groningen: Rob Bakels, Alexander de Haas, Hilmar van Weering, Sander, Eiko de Jong, Falak Sher, Shamsudheen Moidunny, Marjolein Hensens, Evelin Wesseling. It was a pleasure working with you. I am so glad that we collaborated, Maria Alvez and Robert Hofstra. Special thanks go to Angelika Bierhaus, for all your support, nice suggestions and discussions about RAGE signaling. I appreciate a lot our collaboration and I hope that we could extend it in the future. Thomas Blank, thank you for your suggestions and discussions.

Koenito, wonderful friend and amazing listener! I enjoyed all the moments we
spent together, all the long walks, nice dinners and insightful discussions about culture, music, psychology and neurobiology.

Lavinia, îți mulțumesc pentru opinia critică generală, pentru entuziasmul tău în zilele cu soare sau zăpadă, pentru că ai fost catalizatorul “Comunității”, pentru sărbătoarele și lungile seri în care despicam “dialectul” moldovenesc și pe cel ardeleanasc ascultând ”Și/ de ce/ plâng/ chitarele/ băieții/ câteodată” și așteptând ceva “Noutăți”.

Cristi, mulțumesc pentru lungile discuții, pentru diminețile cu minunata cafea și pentru serile când încercam să gătим sofisticat. Îți mulțumesc că ai fost aproape în ultimele luni de stress, pentru că mi-ai oferit o mare satisfacție înțelegând sensurile acestei teze, pentru critica și tot suportul în lupta dintre Windows, Mac și Linux. Ești un prieten adevărat.

Dragă Gabi și Cristi, vă mulțumesc pentru dragostea voastră și pentru că ați fost alături de mine.

Îți mulțumesc, dragă Mica Lili pentru puterea și încrederea ta, pentru curajul de a mă lăsa să decid. A fost greu de când și de tine, dar dragostea ta m-a ajutat și m-a alinat în momentele de indecizie. Dragostea noastră puternică m-a călăuzit mereu, chiar dacă distanța era un impediment. Te iubesc, dragă Mamă!

Îți mulțumesc, dragă Tată, pentru tot suportul și dragostea ta, pentru ambiția pe care mi-ai inspirat-o. Ai fost mereu alături de mine și mi-ai arătat că voința poate învinge nesiguranța, iar dragostea ta poate învinge orice neputință. Sunt ceea ce m-a inspirat să fiu!
