Thanks

I synthesized more 30 drug targeting conjugates. I performed countless BCA assay, I run the HPLC and FPLC for weeks, I used thousands of wells for RT-PCR studies or MTS assays, I isolated RNA, I made cDNA, I spent weeks in the C-lab doing uptake and binding assays, I prepared and held more than 35 presentations, far more than 200000 words found their way into abstracts, reports, protocols, and publications, I prepared poster, and I went to conferences to present my research. But none of this would have been possible without You. You helped me to find my way in the lab, You showed me where to dumb the copper solutions or the KSCN, You refilled stocks in the magazine, You order paper for the printer, You keep the dishwasher running, You prepare sterile PBS and pipette tips, You order animals, You help with in vivo experiments, You explain assays to me, You are critical during our meetings, You read and correct everything I write, You point out some interesting literature, You pay for my conference visits, You gave me the right protocols, You introduce me to other visiting scientists, You organize lab days, You help me understanding the Dutch bureaucracy, You chatted with me during our breaks, You performed immunostainings for me, You cut sections for me, You injected mice with tumor cells and conjugates for me, You discussed my results with me, You helped me to plan the next steps, You isolated and cultured cells, You taught me all step of a RT-PCR, You fixed my computer and You worked with me on my presentations. I am very grateful for all this support and I will always remember You for that. However, let me mention some people by name.

I would like to start with my supervisor and copromotor Dr. Robbert Jan Kok. Robbert Jan, I learned a lot in the past 3.5 years, most of which from you. You always made time for me if I wanted to discuss something. If it would not have been for your speed in checking my manuscripts, I would not have come this fare in due time. I believe your record was five hours to correct a full manuscript.

Prof. Klaas Poelstra, your door was indeed always open and after Robbert left to Utrecht I made a more frequent use of this. The integration into your group went more than smooth and also in the last year in Groningen I got all the support I could wish for.

Prof. Grietje Molema, I still think that it is a pity, that you are not my promoter. Nevertheless, also your door was always open if I wanted to discuss “endothelial” matters. The meetings with Robbert and You were very helpful in the beginning and later, when I presented my results in your group meetings, I got good feedback from everyone in the EBVDT group.

I thank KREATech Biotechnology for all the financial and scientific support. Special thanks go to Marie, Frank, Roel, Paul, and Jack. I will definitely keep an eye on the future of KREATech and further application of ULS in drug targeting.

I want to thank the members of the reading committee, Prof. H. Haisma, Prof. E. G. E. de Vries, and Prof. G. Storm for the fast (and positive) judgment of my thesis.

Annieke, the in vivo experiments would not have been possible without you. It’s really a pity that we did not get a single good result for publication. Henk, you must have used at least 100 m of umbilical cord for all the endothelial cells that I asked for. You were also among the first to encourage me to speak Dutch in the lab. Thanks for that, too, Jan, I sometimes wonder if
the lab would be a “puinhoop” without you. I certainly know, that it will never be one as long as you are around. Additionally, I very much appreciate your helping hand, which you stretch out to every foreign guest of the group.

My paranimfs, Annelies and Jörg: Already some thanks in advance for your support during my promotion.

I also thank all former and current PhD-students, Post-docs, technicians, and secretaries from the PKDD and EBVDT group for help of any kind, for bowling nights, dinners, pot luck dinner, borrels, chats and breaks. I had a great time in Groningen and I will never forget that you are the ones who made it such a great time.

My students, Jan Freark and Vidu, are acknowledged for their hard work.

Marriage tourism is definitely a thing that I recommend to anyone. You really get to see more of a country than the “normal tourists”. Thanks for your invitation Jai, Ruchi, Asia, Albert, Rick, and Annelies. I enjoyed the time in India and I’m looking forward to the wedding in Poland and the Netherlands.

Special thanks go to the vreemdingen politie, the gemeente, and the IND in Zwolle. From each of these institutions I got a foreigner passport. The first time at the vreemdingen politie you told me I would need it for a lot of things, which obviously was a lie. The second time at the gemeente you told me, that you get money for giving me a new one. Well, that’s great for you. Finally in Zwolle you told me that it would not matter if I lose the passport or if the passport expires, because I wouldn’t need it anyway. Thank you for wasting my but also your time.

Abschließend komme ich zu dir, Maike. Life with you is simply great. But the best is that there are many more years to come.
