# Contents

## 1 Introduction
- 1.1 Lattice defects in metals
- 1.2 Scope and outline of the thesis

## 2 Basic concepts
- 2.1 Dislocations and grain boundaries
- 2.2 Imaging techniques
- 2.3 Nanoindentation

## 3 Incipient plasticity at grain boundaries in bcc metals
- 3.1 Introduction
- 3.2 Experimental procedure
- 3.3 Dislocation nucleation at grain boundaries
- 3.4 Dislocation pile-up and transmission across grain boundaries
- 3.5 Grain boundary hardness measurements
- 3.6 Slip transmission: a Hall-Petch approach
- 3.7 Slip transmission: a gradient plasticity approach
- 3.8 Conclusions

## 4 Dislocation and grain boundary dynamics during indentation of Al and Al-Mg thin films
- 4.1 Introduction
- 4.2 In situ nanoindentation in a TEM
- 4.3 Experimental procedure
- 4.4 Dislocation dynamics in Al and Al-Mg thin films
- 4.5 Grain boundary dynamics in Al and Al-Mg thin films
- 4.6 Conclusions
Superplastic behavior of coarse-grained Al-Mg alloys............95

5.1 Introduction.............................................................................................95
5.2 Superplasticity in fine-grained Al-Mg alloys.................................96
5.3 Superplasticity in coarse-grained Al-Mg alloys............................99
5.4 Experimental procedure ..................................................................106
5.5 Macroscopic mechanical behavior.................................................108
5.6 Dynamic reconstruction .................................................................110
5.7 Conclusions.......................................................................................118

Publications ..........................................................................................121

Summary ..............................................................................................123

Samenvatting.........................................................................................127

Dankwoord..........................................................................................131
