This last page is probably the easiest to read, but I find it the most difficult to write. The work leading to this thesis was made possible through the contributions of many people.

Hans, first of all I would like to thank you for the effective guiding, support and positive criticism. I admire your efficiency and clarity. Herman, your impressing presentations helped me keep my mathematics knowledge fresh. Doekele, thank you for your constructive comments and for being my promotor. Jannes Land, your work significantly improved the experimental setup.

Olga, moving to Netherlands was easy, thanks to your efforts. Your friendship and kindness helped me through my first months here and, amazingly, you managed to keep the bureaucracy mostly hidden from me. Annelies, thank you for continuing the job of solving unsolvable administrative problems. I want to thank all the members of the Biophysics group, and especially Branislava, Kurt, Sonja, Gerke, Theo, Marten, Lila, Yuni and Joep for the nice moments we spent together.

In Groningen I met some old friends and I made new ones. Szili, Csaba, Misu, Andrei, Cristi, Florin and Mihai: it is a pity that at some moment we broke with the tradition of ballistic white nights; practicing the sport alone...
is not as funny. When not in front of the computer, many people - too many to mention them all - ensured that I had a social life. Thanks!

I am one of the few lucky ones to have relatives in Netherlands. Cristina, your optimism and readiness to help were a great support; together with Robert you helped me quite often with even more enthusiasm than I had. Violeta, your wise advice is always welcome.

Finally, I am grateful for the constant and enthusiastic support of my parents. Mihaela, thank you for everything.
