ACKNOWLEDGEMENTS

As I sit down to write these final pages, I realize this project has finally come to its end. As challenging yet wonderful as it was however, it could not have been done without the help of a lot of other people. For this I would like to express my thanks and gratitude.

First, to my promoters Prof. Dr. Hans den Boer and Prof. Dr. Gert ter Horst. I will always be grateful to the both of you for the opportunity to have worked in your department, for your guidance and most of all your friendship. Without doubt it has been a most fruitful and learning experience. Not only has our “working together” provided an excellent base for my scientific future, it has also opened many new doors. Hopefully one day we can pick up where we left off and continue our collaboration. Until then, I will look back with fond memories and nostalgia on my time as an AiO under your supervision, characterized always by latitude, trust, stimulation, enthusiasm and continual support. I could not have wished it any other way.

As happy as I am, to have completed this thesis, it is with equal sadness that I realize my time with such wonderful colleagues has reached its end. To Tineke S., Tineke K. and Folkert I owe a very big thanks. During my “pregraduate” training you provided me with my first introduction to science and evidently the impression you made was great enough to get me to come back for more; first for a course, then for an internship, and finally for a PhD! At first I couldn’t even manage a single immunostaining, and now I have a whole thesis full of them! Thanks to you! More importantly however, I am grateful for your kindness and constant readiness to help, on all matters (regarding science and beyond). To Kor, Peter, and Petra your technical assistance was invaluable throughout my experiments. I really could not have done it without you. To Jaap, although we didn’t have the chance to work very closely, I appreciate your continuous interest, friendly notes, and help with data interpretations. To my fellow colleagues/friends from the 7th, Andrea, Charmaine, Christel, Dirk, Gabor, Gea, and Marjolein, thank you for the good times and “social support” throughout the years. Likewise to the colleagues/friends from the 6th floor, Annemiek, Fokko, Franske, Ingrid, Marjan, Martijn, Mbemba, Peter Paul and Sascha thanks for the fun, the laughs and friendly tête-à-tête. Joanna, Marieke, Minke and Simone you were fantastic “room slash dinner” mates! …a little nuts perhaps, but I will really miss you guys and our (oftentimes hilarious) discussions! To Jacqueline and Margo, thanks for your help, advice and always pleasant nature. To all the others, without mentioning names, thank you very much.
All of you have contributed in your own way to a wonderful, warm working atmosphere that I will miss for a very long time.

A special word of thanks is extended to my pregraduate students, Niels (Ingen Housz), Sonja (Janmaat) and Raoul (Ribot). You know, like no other, the extent of discipline and perseverance that accompanies long-term experimentation. Oftentimes throughout these projects however, we ourselves became subject to “chronic stressful conditions”, but your patience and enthusiasm made it that much easier to get the job done. I am grateful to your hard work, invested time and efforts, which contributed greatly to a bulk of the data presented in this thesis. I wish you all the luck in your futures.

I would also like to thank the members of the Pathology group for their pleasant company, advice and help whenever I needed it. I am particularly indebted to Rense Veenstra, Elvira Oosterom, Geert Harms and Lorian Menkema, who were there to witness my initial “take-off”, four years ago, which would have been much slower and a lot more frustrating without their generous and excellent technical support. By the same token, I am indebted to Gerard te Meereman and Karoly Mirnics for providing invaluable assistance during perhaps the most challenging aspect of this project, the microarray analysis. Fortunately we can look back on a pleasurable and successful collaboration. Thank you.

I am grateful to the BCN for their support throughout my PhD endeavours, with a special note of thanks to Tinie Alma, Diana Koopmans, Rob Visser and the PhD council. Not alone in their contribution however, I am also grateful for the professional and/or financial assistance from the industries that contributed toward the completion of this thesis with a special note of appreciation to Dr. Carmen Munoz, for her steadfast help and cooperation.

Last but not least I am grateful to those who have done so much more than help me fulfill this course of study. I am thankful to my friends and family, Appie, Beppe, Chris, Eleonora, Els, Giuseppe, Ids, Ingrid, JD, Marjan, Marjolein, Markus, Marten, Monique, Ralph, Ronnie, Sonia, Thomas and Tarzan for providing a solid source of merriment and relaxation and at times the much needed distraction from PhD-associated struggles and tribulations. A special mention goes to Henne and Ineke, my beautiful paranymphs and very dear friends throughout this academic journey. I consider myself lucky with friends like you and I’m sure the best is yet to come!

To papa, mama, Albert and Marten, I thank you for always being there for me, enabling me to be who I am today and where I am today. It is your continual belief in me, to which I thank all of my accomplishments. As far back as I can remember (temporally and
Acknowledgements

geographically), you have been the constant source of love, support and encouragement, making everything possible. There are not enough words to describe all the thanks you deserve, but perhaps these three come close: I love you!

…and then to save the best for last, Andrea, the one person who was absolutely indispensable throughout this project. Your continuous input, effort, clever suggestions, and optimistic nature were invaluable and it goes without saying that without you this thesis would not have turned out as it did. More precious than that however, were your friendship, love and dedication throughout the years. From the moment we met you became my colleague, friend and confidant and eventually my dearest companion. In breve, tu sei tutto per me. Ti voglio bene!

Thanks again to all of you!

Sjoukje
