Nuclear Activity in Nearby Galaxies

PROEFSCHRIFT

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts
in het openbaar te verdedigen op
vrijdag 9 mei 2003
om 14.15 uur

door

Mercedes Esteves Filho

geboren op 10 december 1972
te Newark, NJ, USA
Promotor: Prof. dr. J. M. van der Hulst

Co-promotores: Dr. P. D. Barthel
               Dr. L. C. Ho

Beoordelingscommissie: Prof. dr. A.G. de Bruyn
                        Prof. dr. H. Falcke
                        Prof. dr. R.H. Sanders
I shall be telling this with a sigh
Somewhere ages and ages hence:
Two roads diverged in a wood, and I-
I took the one less traveled by,
And that has made all the difference.

*The Road Not Taken*

ROBERT FROST

## Contents

1 Introduction ......................................................................................... 9
  1.1 Galactic Nuclei .............................................................................. 9
    1.1.1 Black Holes .......................................................................... 9
    1.1.2 Accretion Modes .................................................................. 9
    1.1.3 Emission Mechanisms .......................................................... 10
    1.1.4 The AGN Zoo ..................................................................... 11
  1.2 This Thesis .................................................................................. 12
    1.2.1 The Sample .......................................................................... 12
    1.2.2 The Diagnostic Tools .......................................................... 13
    1.2.3 Scientific Rationale ............................................................. 14
    1.2.4 Thesis Outline .................................................................... 14

2 The Nature of Composite LINER/H II Galaxies, Part I ......................... 15
  2.1 Introduction ................................................................................ 16
  2.2 Sample Selection .......................................................................... 17
  2.3 Observations and Data Reduction ................................................ 17
  2.4 Results ....................................................................................... 19
    2.4.1 Radio Maps ......................................................................... 19
    2.4.2 Comments on Individual Galaxies ........................................ 19
    2.4.3 Radio Source Parameters .................................................... 26
  2.5 Discussion .................................................................................. 28
  2.6 Conclusions .............................................................................. 30
  2.7 Acknowledgments ...................................................................... 31
  2.A Radio Maps ............................................................................... 31

3 The Nature of Composite LINER/H II Galaxies, Part II ....................... 39
  3.1 Introduction ................................................................................ 40
  3.2 Sample Selection .......................................................................... 40
  3.3 Observations and Data Reduction ................................................ 40
  3.4 Results ....................................................................................... 42
    3.4.1 Radio images ....................................................................... 42
    3.4.2 Comments on Individual Galaxies ........................................ 43
    3.4.3 Radio Source Parameters .................................................... 49
3.5 Discussion and Statistical Results .............................................. 50
  3.5.1 Radio Morphology .......................................................... 51
  3.5.2 Radio Spectral Index ....................................................... 54
  3.5.3 Radio Power ................................................................. 55
  3.5.4 Radio Continuum and Line Emission .................................... 55
3.6 Conclusions ............................................................................. 59
3.7 Acknowledgments ..................................................................... 60
3.A Radio Maps ............................................................................. 60

4 Further Clues to the Nature of Composite LINER/H II Galaxies 65
  4.1 Introduction ............................................................................ 66
  4.2 Sample Selection ..................................................................... 66
  4.3 New and Archival Radio Observations ..................................... 67
    4.3.1 Observations and Data Reduction ..................................... 67
    4.3.2 Results of the Radio Observations .................................... 68
  4.4 Archival X-ray Observations .................................................. 72
    4.4.1 Observations and Data Reduction ..................................... 72
    4.4.2 Results of the X-ray Observations .................................... 73
  4.5 Far-Infrared Properties ........................................................... 74
  4.6 Radio, Optical and X-ray Relations ......................................... 74
    4.6.1 Radio-Loudness ............................................................... 76
    4.6.2 Radio vs. Hα and [O I] Luminosity .................................... 77
    4.6.3 X-Ray vs. Hα Luminosity ................................................ 77
    4.6.4 Radio vs. X-ray Luminosity ............................................. 78
  4.7 ADAFs or Jets? ....................................................................... 79
  4.8 Conclusions ............................................................................ 83
  4.9 Acknowledgments .................................................................... 84
  4.A Radio Maps ............................................................................. 84

5 A Radio Census of Nuclear Activity in Nearby Galaxies 89
  5.1 Introduction ............................................................................ 90
  5.2 Source Selection ..................................................................... 91
  5.3 Observations and Data Reduction .......................................... 91
  5.4 Radio Properties ..................................................................... 91
  5.5 Luminosity Functions ............................................................. 94
    5.5.1 Optical Luminosity Function ........................................... 95
    5.5.2 Radio Luminosity Function .............................................. 96
  5.6 Discussion .............................................................................. 99
    5.6.1 Local Luminosity Functions ............................................. 99
    5.6.2 Local Black Hole Mass Density ....................................... 102
  5.7 Conclusions ............................................................................ 103
  5.8 Acknowledgments .................................................................... 103
  5.A Radio Maps and Plots ............................................................ 103
## CONTENTS

### 6 Light-Year Scale Radio Cores in Four LINER Galaxies 113

6.1 Introduction ........................................ 114
6.2 Sample Selection ................................... 114
6.3 Observations and Data Reduction ...................... 115
6.4 Results .............................................. 115
6.5 Individual Galaxies .................................. 117
   6.5.1 NGC 2911 ........................................ 117
   6.5.2 NGC 3079 ........................................ 117
   6.5.3 NGC 3998 ........................................ 118
   6.5.4 NGC 6500 ........................................ 118
6.6 Discussion and Summary ............................... 119
6.7 Acknowledgments .................................... 120
6.A Radio Maps .......................................... 120

### 7 High Resolution Radio Observations of M 104 123

7.1 Introduction ......................................... 124
   7.1.1 The Radio Spectrum ............................. 125
7.2 Observations and Data Reduction .................... 128
7.3 Radio Data ........................................... 128
7.4 Discussion and Conclusions .......................... 130
7.5 Acknowledgments .................................... 132

### 8 Conclusions and Future Work 133

Nederlandse Samenvatting ................................. 137

English Summary .......................................... 147

Bibliography .............................................. 157

Publications .............................................. 167

Acknowledgments .......................................... 169
