# Contents

Chapter 1	General introduction	7
Chapter 2	Deterministic grassland assembly of both species and individuals	17
Chapter 3	Do plant traits retrieved from a database accurately predict on-site measurements?	43
Chapter 4	Variation in community traits along environmental gradients: comparing trait databases with on-site measurements	63
Box 1	Target species of wet meadows in the Drentsche Aa reserve are limited both by dispersal and establishment barriers	77
Chapter 5	Fallow, grazing and mowing treatments affect trait variation in salt-marsh communities	85
Chapter 6	Grassland cutting regimes affect soil properties, and consequently vegetation composition and belowground plant traits	99
Box 2	Drought-induced population collapses of the hemiparasite <i>Rhinanthus angustifolius</i> may constrain its impact on ecosystem dynamics in the long run	123
Chapter 7	Synthesis	127
