CONTENTS

Chapter 1	General introduction	9
Chapter 2	Environmental and genetic variation can influence drug plasma concentrations	21
Chapter 2.1	Switching from smoking to the use of an e-cigarette can increase drug exposure	23
Chapter 2.2	Relation between CYP2D6 genotype, phenotype and therapeutic drug concentrations among nortriptyline and venlafaxine users in old age psychiatry	31
Chapter 3	Validation of dried blood spot sampling for therapeutic drug monitoring of tricyclic antidepressants and venlafaxine	45
Chapter 3.1	A simple dried blood spot method for therapeutic drug monitoring of the tricyclic antidepressants amitriptyline, nortriptyline, imipramine, clomipramine, and their active metabolites using LC-MS/MS	47
Chapter 3.2	Determination of venlafaxine and O-desmethylvenlafaxine in dried blood spots for TDM purposes, using LC-MS/MS	67
Chapter 3.3	A clinical validation study for application of dried blood spots in therapeutic drug monitoring of antidepressants	79
Chapter 4	Cost-effectiveness of precision drug therapy	101
Chapter 4.1	Economic evaluations of pharmacogenetic and pharmacogenomic screening tests: a systematic review. Second update of the literature	103
Chapter 4.2	A model-based cost-effectiveness analysis of routine genotyping for CYP2D6 among older depressed inpatients starting nortriptyline pharmacotherapy	151
Chapter 4.3	Effects and cost-effectiveness of pharmacogenetic screening for CYP2D6 among older adults starting therapy with nortriptyline or venlafaxine: study protocol for a pragmatic randomized controlled trial (CYSCE trial)	175
Chapter 5	General discussion and future perspective	191
	Summary	205
	Samenvatting (Nederlands)	209
	CV	215
	Acknowledgements (Dankwoord)	217
	SHARE publications	219
