Dear readers/Beste lasers, 4-years of PhD. has come to an end. A period that can be characterized as an exciting (granted long) basketball game. It would not be possible without the people around me and here I want explicitly thank a few of them.

First of all, like a basketball game you cannot go without solid and trustworthy coaches that guide you throughout, people who had a clear vision on how the game should be played and always with an eye on the prize. I am grateful to my supervisor dr. Thorben Cordes, my promotor Prof. Antoine van Oijen and co-supervisor Prof. Andreas Herrmann.

dr. Thorben Cordes, back in 2011 you convinced me of starting my Master research project in your new research group. Being one of the first three members of your group, I saw the group growing and finding his way to the group it is today. It was a honour being at the start of this group and I am proud what has become of it. I enjoyed this period and learned a lot from this and you. After my Masters I decided to stay for my PhD. as your first PhD. student in your group. I would like to thank you for giving me the opportunity to do so. During the 5 years in your group I learned a lot from your scientific intuition and how every little seemingly small results can get you enthusiastic. We did not always agree on the scientific pathways that were the best to take, but we both were always on the same page considering the long term goals and we managed to get there. I appreciated the freedom you gave me to be able to visit other research labs and gain more experience from it. It was a pleasure working in your group.

Prof. Antoine van Oijen, thank you for willing to be my promotor and the opportunity you gave me to be part of your group. Your scientific intuition and ideas, your enthusiasm and motivation have always amazed and inspired me. Additionally, you were always available for discussions, help and advise, something that I appreciate. I enjoyed working in your group.

Prof. Andreas Herrmann, thank you for being my co-supervisor. It was a pleasure and honour working with you. Thank you for all the advice and ideas during the group-meetings, which in the end resulted in a few nice co-authored publications.

I would like to thank the members of my assessment committee Prof. Wesley Brown, Prof. Philip Tinnefeld and Prof. Wouter Roos. Thank you for the critical reading of my thesis.

Naturally, you can not play a basketball game without teammates. Hence, during the game of PhD. I had a great team with great successes. To all of my colleagues from the Molecular-microscopy research group and Single-molecule biophysics group in Groningen, thanks. A PhD. is not possible without a good, fruitful and vibrant working environment. There has not been a single day that I did not enjoyed. Hylkje, my buddy, you made my stay in Groningen definitely a lot more fun. I appreciate all the (fun) discussions we had, doing sports, having fun at conferences (bringing it to the next level), having drinks, organising the lab-outing and a lot
more. I will never forget the "twister to mex game" we invented, "the stone-men" and all the other fun we had (too much to sum up here). Thank you for being a good friend!! Victor, you were the first to join the office with me and Jochem. That you managed still surprises me. You are a great scientist, but even more you turned out to be one of my best friends in and out of the lab. You made working in Groningen a lot more fun; lunches, random talks, doing sports together and trivia nights. Lisanne, my ping-pong buddy, whenever I was stuck with writing or whenever I needed a break you were always there to play a game of ping-pong and talk about random or more serious things. It made working a lot easier. I would also like to thank all the other members that were part of the group during my PhD. Giorgos, Marijn, Jelle, Joris, Alex, Florence, Atieh, Yousan, Kostas, Victor K., Audrey, Da, Harshad, Sarah, Yichen, Muhammed, Andrew, Jason, Karl, Guus, Evelyn, Evelyn, Samaneh, Marysa, Martin, Michiel, Jan-Peter, Magriet, Enrico and Flynn. Thank you all for creating a nice atmosphere in the group, it has been a great pleasure.

A big thank you also goes out to my collaborators, in particular: Jens and Prof. Gerard Roelfes, together we started off the synthesis described in this thesis. I enjoyed working together which resulted in three co-authored publications; Jinghy, Jan-Willem, Eliza and Prof. Andreas Herrmann, I appreciate our scientific discussions and the work we did together. Also this resulted in multiple co-authored publications; Jaakko and Prof. Siewert-Jan Marrink, thank you for the help with the simulations. It was interesting getting to know this scientific field which helped me in the understanding of our system and resulted in a co-authored publications.

I would like to thank Prof. Suzanne Blum for the opportunity to work your in research lab in Irvine, California. I still profit from this experience and the knowledge I gained. Especially, your view on science and how to approach problems inspired me. Alex, it was a pleasure getting to know you and work with on a common research project. I still think about that time in Groningen and Irvine. Thank you for helping and showing me around in Irvine. You made me feel welcome. Drew, we shared fantastic moments during our hikes. It was a pleasance getting to know you and your motivation and view of science has inspired me.

During my PhD. I was also in the fortunate position to work with some talented students and be their coach. Mathias, Prem, Alessio, Lourens-Jan, Si, Sarah and Vanessa. Multiple results and discoveries in this thesis have a resulted because of your hard work and thinking.

There are two star-players in the team who can not go unnoticed. They are the players with whom I made it to the finals. Both of you are team-players who always try to make you a better player: my paronymphs. Jochem, not only are we colleagues you are also a good friend. We studied together, and subsequently we were the first students to join the Molecular-microscopy research group. The latter would not have happened if you would not have introduced me to the
group. Working in the same lab has helped me through the PhD. I will never forget all the fun we had, chasing mice, making viewing boxes, doing experiments together, working till late, drinking beers and a lot more. Onno, being my best friend I had no other option than picking you as my paranymph. During my PhD. you were always interested in what I was doing. You supported and helped me throughout, in either good or bad times, science related or outside the lab. Who would have thought that when we were sitting on the far right side of the substitution-bench. On top of that you always managed to made sure I saw things in perspective, such that I could make the right decision. You are friend in every part and I can’t wait to claim a few more items. Thank you for being such a good friend. It is an honour having you both as my paranymph and it will make me a lot more comfortable during my defence.

I can’t continue without thanking Lycke. Lycke, you are always ready to help and I really appreciate all the discussions we had, making me think about problems or topics from a different point of view which in the end has always helped me. Besides that you are always there to have a good laugh and drink with and just have fun, thank you.

Boukje, you were there when this game started. You helped me get through some of the difficult phases of the PhD. and supported me whenever needed. Thank you for the rememberable moments we had together.

During my PhD. every week was different containing either successes or losses. However, each week I could always rely on the FRANK to share those moments with. Lennart, Ward, Ties, David and Job, what started off as an occasional Friday afternoon gathering turned out to be one of the highlights of the week, something to look forward to at the start of the week making it a good end of the week and a good start of the weekend. The FRANK has had a huge contribution to my PhD. period with moments I will never forget, the legendary first FRANK, the FRANKtivities, Leiduhh, levensgenieter and more. Lennart, Ward, Ties, David and Job, not only did we share rememberable moments, you guys are real friends, always ready to help or be a listening ear.

Tot slot wil ik graag mijn ouders en broertjes bedanken, zij die altijd langs de kant staan om mij aan te moedigen. Mam en pap, wie had dat gedacht toen ik naar de middelbare school ging met dat ene advies van de basisschool. Jullie staan altijd voor mij klaar en hebben mij altijd gesteund in mijn keuzes. Dankjewel voor alle mooie momenten samen, gezelligheid en adviezen of schop onder de kont. Wouter en Roeland, mijn toffe broertjes, het is fijn om jullie als broer te hebben en ik geniet altijd van de momenten die we samen doorbrengen. Scout, het is fijn om jou in de familie te hebben.

"Thank you all for helping me win this game"

Jasper van der Velde
