**The Effect of Wettability and Stiffness on
Stem Cell Behavior at Biointerfaces**

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. E. Sterken
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op
maandag 21 november 2016 om 14:30 uur

door

Philipp Till Kühn

geboren op 17 februari 1989
te Bergisch Gladbach, Duitsland

Promotor

Prof. dr. ir. H.J. Busscher

Copromoter

Dr. P van Rijn

Beoordelingscommissie

Prof. dr. A. Böker

Prof. dr. M.C. Harmsen

Prof. dr. A. Herrmann

Barbara Santos de Miranda

Table of Contents

Chapter One

General introduction	1
Biointerfaces	2
2-Dimensional substrates	2
3-Dimensional matrices	4
Aim of this thesis	5

Chapter Two

Biomaterial-stem cell interactions and its impact on stem cell behavior	9
Biointerfaces	11
Environment sensitivity of stem cells	13
Biomaterials directing stem cell behavior	15
Stem cells and wettability	16
Stem cells and chemical functionality	18
Stem cells and modulus	20
Materials used as stem cell scaffolds	21
Effects of stem cell type towards materials	22
Deviating behavior of stem cells of different origin	23
Deviating behavior of stem cells at material interfaces	23
Possible Memory Effect of Stem Cells	26
Towards designing biomaterials with a greater impact: Conclusions and Perspectives	27

Chapter Three

Directed autonomic flow: functional motility fluidics	33
Introduction	35
Gradient generation	36
Droplet movement	37
Motility chip	38
Movement analysis	39
Conclusion	42
Experimental section	42

Chapter Four

Double linear gradient biointerfaces for determining two-parameter dependent stem cell behavior	47
Introduction.....	49
Generation of gradients	50
Macroscopic cell behavior	51
Cell adhesion and spreading.....	53
Conclusion	56
Experimental section	57

Chapter Five

Non-covalently stabilized alginate hydrogels as functional cell scaffold material....	63
Introduction.....	65
Polymer-alginate hydrogel formation.....	66
Mechanical Properties of Polymer-Alginate Hydrogels	69
Morphology and Permeability of Polymer-Alginate Hydrogels.....	70
Cell Encapsulation and Toxicity	72
Conclusion	75
Experimental Section	76

Chapter Six

Anti-microbial biopolymer hydrogel scaffolds for stem cell encapsulation.....	81
Introduction.....	83
Gel Characterization.....	83
hBM-MSC encapsulation.....	85
Bactericidal Effects of the Gels	85
Conclusion	87
Experimental Section	87

Chapter Seven

General discussion	93
Summary	101
Samenvatting	105
Zusammenfassung	111
Acknowledgements	115
