Printing of this thesis has been generously supported by:

University of Groningen

Dutch Technology Foundation
(STW)

Groningen University Institute
for Drug Exploration

The research reported in this thesis was carried out at the University of Groningen in the Analytical Biochemistry group, member of the Groningen Research Institute of Pharmacy. The work was financially supported by the Dutch Technology Foundation STW (Grant 11957).

Electrochemical and Enzymatic Synthesis of Oxidative Drug Metabolites for Metabolism Studies

Exploring Selectivity and Yield

PhD Thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 10 February 2017 at 16:15 hours

by

Turan Gül

born on 10 March 1987
in Iğdır, Turkey

Supervisor

Prof. R.P.H. Bischoff

Assessment Committee

Prof. G.J. Poelarends

Prof. F.J. Dekker

Prof. H. Oberacher

*Dedicated to my beloved Grandfather whom I lost
recently and all the members of my big family...*

Table of Contents

1. General introduction and thesis scope	1
1.1. Aim of the research	2
1.2. Phase I drug metabolizing enzymes	2
1.2.1. Cytochrome P450 (CYP) enzyme	2
1.2.2. Flavin-containing monooxygenase (FMO) enzyme	3
1.3. <i>In vivo</i> Phase I oxidation reactions	4
1.3.1. Heteroatom dealkylation	4
1.3.2. Heteroatom oxidation	5
1.3.3. Aliphatic/Aromatic hydroxylations	6
1.3.4. Dehydrogenation and Epoxidation	7
1.4. Electrochemical synthesis of drug metabolites	8
1.4.1. Direct electrochemistry	8
1.4.2. Indirect electrochemistry	9
1.5. Scope of the Thesis	11
1.6. References	12
2. Electrosynthesis methods and approaches for the preparative production of metabolites from parent drugs	16
2.1. Introduction	17
2.2. Electrochemical Techniques Used in Drug Metabolism	19
2.3. Design of Electrochemical Cells for Drug Metabolite Synthesis	22
2.3.1. Electrode materials	22
2.3.2. Electrochemical Cell Types	24
2.3.2.1. Thin-layer Flow Cells	24
2.3.2.2. Porous Flow-through Cells	24
2.3.2.3. Batch Cell Reactors	25
2.4. Electrochemical Reaction Parameters	27
2.4.1. Solvents	27
2.4.2. Dissolved Gases	28
2.4.3. Solution pH	28
2.4.4. Supporting Electrolyte	29
2.4.5. Substrate Concentration	29
2.5. Conclusions and Future Trends	30
2.6. References	31
3. Optimization of reaction parameters for electrochemical oxidation of lidocaine with a Design of Experiment approach	38
3.1. Introduction	39
3.2. Experimental Procedures	40
3.2.1. Reagents	40

3.2.2. Electrochemical measurements	41
3.2.3. Experimental Design	41
3.2.4. LC-MS Analysis	42
3.3. Results and Discussion	44
3.3.1. Optimization of EC parameters	44
3.3.2. pH effect on N-dealkylation	47
3.4. Conclusions	48
3.5. References	49
4. Mechanism of aromatic hydroxylation metabolites of lidocaine at a Pt electrode under acidic conditions	52
4.1. Introduction	53
4.2. Materials and Methods	55
4.2.1. Reagents	55
4.2.2. Electrochemical Measurements	55
4.2.3. LC/MS analysis	56
4.3. Results and Discussions	57
4.3.1. Aromatic hydroxylation reactions of lidocaine under strong acidic conditions	57
4.3.2. Investigation of the oxygen source	57
4.3.3. Investigation of the aromatic hydroxylation mechanism	60
4.4. Conclusions	62
4.5. References	63
5. Microbial flavoprotein monooxygenases as mimics of mammalian Flavin-containing monooxygenases for the enantioselective preparation of drug metabolites	67
5.1. Introduction	68
5.2. Materials and Methods	69
5.2.1. Materials	69
5.2.2. Recombinant expression of BVMOs and preparation of cell extracts	70
5.2.3. Monooxygenase-catalyzed conversions	70
5.2.4. Chiral LC-MS/MS in the Selected Reaction Monitoring (SRM) mode	71
5.2.5. Circular Dichroism	72
5.3. Results	73
5.3.1. Conversion of the sulfide 3-methyl(thio)aniline	73
5.3.2. Conversion of the thioether drugs, albendazole and fenbendazole	76
5.3.3. Conversion of the amines, lidocaine and nicotine	78
5.3.4. Quantification of product yields with standard addition method	80
5.3.4.1. 3-methyl(thio)aniline	80
5.3.4.2. Albendazole sulfoxide	81
5.4. Discussion	84
5.5. References	86

6. Future Perspectives	90
7. Nederlandse samenvatting	94
Acknowledgements	98
