Acknowledgements

Pursuing a doctor degree is really a tough work. Thanks to all the lovely individuals I met, it has become an unforgettable journey with not only stress and sweat, but also laughter, happiness and wonderful moments. At this moment, I want to express my sincere gratitude for all the individuals without whom this thesis could not have been finished.

Special appreciation and thanks go to my two great supervisors: Jakob de Haan and Bert Scholtens. They have spared no effort to train me and help me to become a better man. I feel so honored and so lucky to be their PhD candidate. I would like to thank Jakob, as he showed me how to make up a solid proposal, how to organize the paper, and how to do research rigorously. More important is that he always encourages me to face the challenge and to go further. These teachings will inspire me for a lifetime. I would like to thank Bert, as he instructed me to write a convincing paper in very detail. He is so kind and considerate. I could not have finished this thesis without his help.

I am indebted to my supervisor in University of Chinese Academy of Sciences (UCAS), Prof. Haizhen Yang. She led me into the door of the research. She taught me how to think logically and how to find valuable research questions based on the requirements in real economy. I am so grateful for her enduring support and help. I would also thank Prof. Xiaoguang Yang, who has provided valuable comments and suggestions on my research. His passion for research has inspired me to move forward.

A warm “Thank you!” goes to Prof. Jan Jacobs. He has provided a lot of instruction on the methodology in this thesis. Every time when I was confused and asked him for help, he answered my questions with great patience. I would also thank Prof. Rob Alessie for offering me valuable suggestions on econometric models in this thesis. I also benefit a lot from the comments by Prof. Steven Brakman and Prof. Dirk Bezemer in the PhD conference. Many thanks go to Prof. P. Tilmann, Prof. S.C.W. Eijffinger, and Prof. B.W. Lensink for reading all the chapters and for their valuable comments to improve this thesis.

I would like to thank all the professors who launched the double-PhD program. I am also quite gratitude for the help from the entire SOM staff and the secretaries of GEM. Special thanks go to Arthur de Boer, Justin Drupsteen, Jenny Hill, Rina Koning, Ellen Nienhuis, Taco van der Vaart, and Herma van der Vleuten for helping me to deal with the
life and study difficulties in Groningen.

I am grateful to my colleagues Wen Chen, Jiasi Fan, Qiubin Huang, Aobo Jiang, Zhongbo Jing, Abdi Oumer, Kristiane Rozite, Yanping Zhao for sharing their insights with me. I am also grateful to all of my friends Yuwan Duan, Xin Fan, Feng Hu, Jing Jing, Ye Liu, Xiaofeng Liu, Leticia Lemus, Yan Shao, Donglin Sun, Kailan Tian, Xiao Wang, Jiyuan Wang, Sarayut Watchasit, Chengyong Xiao, Bingqian Yan, Yan Yan, Jingjing Zhang, Tao Zhu. Life in Groningen has become so colorful and joyful with all of your company. Special thanks go to all my brothers and sisters in Groningen Student Fellowship Xiaoshan Bai, Bing Han, Emily Jin, Zining Luo, Yiqun Ma, Chunshuang Qu, Yue Sun, Tian Wu, Rui Wu, Yuan Wu, Lujun Xu, Huifang Yin, Qian Zhou, Jiaxi Zhang, Haoxiao Zuo, Demi and Wanru. Whenever I was frustrated, you cheered me up. I could not have finished this thesis without your love and encouragement.

At last, I would like to express my sincere gratitude to my parents. Thank you for teaching me to appreciate this world. Thank you for your enduring support, encouragement, acceptance and love. Whatever happened, you are always by my side. Special thanks go to Peng, who shares all the happiness and pains with me in our lives. My beloved family, you are the most precious treasures in my life.

And thanks to all of you!

Suxiao Li
