This PhD project would not have been carried out successfully without the help and support that I received of a great many people and I would like to take the opportunity to express my sincerest gratitude to everyone who has supported me on a personal and professional level during the preparation or with the content of this dissertation.

First and foremost I would like to express my sincerest gratitude to my promotores. Francesco Picchioni, when I was in the fifth grade of my secondary school and visited the University of Groningen for the first time in 2005, you inspired me to study Chemical Engineering with your Italian accent and an exciting story about the glass transition temperature of rubber shoe soles. Many years later I found myself working with (and not ‘for’, that is important!) you on similar materials. Thank you for all the life lessons, freedom and opportunities you have given me to learn and develop myself into, as many people say, a younger version of yourself. However, with just Francesco and me setting up the project, it would all have become rather unorganized and chaotic. I am therefore ever so grateful that you, Martin van Duin were able to get a position as part time professor at the University of Groningen, became involved in the project and supervised me as my co-promotor. Besides your indispensable contribution to the project, I also learned a lot from your structured and organized way of thinking and appreciate your personal involvement greatly. Those three days on Schiermonninkoog may have been the most productive ones in my entire PhD period!

I would also like to take this opportunity to thank the members of the reading and assessment committee. Sophie Norvez, Katja Loos and Erik Heeres, thank you so much for taking the time and effort to read and evaluate this thesis. Although we have not (yet) had the pleasure of officially collaborating on a scientific project, all three of you have been an inspiration for me during different periods of my curriculum. Katja and Erik, you both played a major role in my choices to focus on polymers and chemical engineering, respectively. Sophie, we met at the ICSHM and found a common interest in our work on thermoreversible rubber that lead to a pleasant contact ever since. Ton Broekhuis, if it were not for your retirement I guess you would’ve been my co-promotor and I would like to thank you for the valuable feedback and suggestions you have given me on both a personal and professional level during my PhD period. It is therefore in a way befitting that you are willing to be the chairman for the defense. Marc van der Maarel, thank you for being a coach and a friend during the period of my PhD. Our many pleasant conversations have truly changed my view on science and education. Andrea Pucchi, thanks for arousing my interest in many diverse topics that did initially seem to be related with my PhD project. You and a number of your
excellent students who also became truly good friends had a major contribution to a number of scientific projects and inspired me to broaden my scientific interest beyond the topics of this dissertation. Alexandros Gotsis, brief as the period that we worked together in Crete was, you may have been the key person for me in deciding for pursuing a PhD. The only regret I have is that we did not find more possibilities of collaborating during this PhD.

Besides financially supporting this project, the Dutch Polymer Institute also contributed to this PhD thesis on many other levels. Many thanks to the industrial partners Waldo Beek (AkzoNobel), Tony Matthew (Teijin) and Warrick Allan (SKF). Your involvement, suggestions and feedback were of indispensable value and motivated me in steering this PhD project in an ever more societal relevant direction. Ronald Korstanje and Denka Hristova-Boagaerds, thank you for your involvement and for keeping the ever expanding project structured and focused as program coordinators. Constantino Creton, thank you for your input, enthusiasm and motivation as scientific coordinator. Finally, I would like to mention here that I really enjoyed the first “young DPI” meeting and workshop. All PhD students involved (especially Vasilis, Liliana and Lizzy) became close friends who constantly shared thoughts and ideas and motivated each other throughout the process.

A PhD project is never performed by an individual alone and I would like to thank the Master and Bachelor students who worked with me on this project and other research projects during my PhD. Jeroen (the first and the last), Annienke (Crete revisited in an epic adventure), Robin (Batman’s sidekick), Erik (always joking, working hard and doubting all along), Machiel (appropriately the Italian guy), Giovanni (working so hard), Bernard (the practical guy), Reinoud (the showman), Tiago (my little brother), Nuno (mansplainer), Mattia (samurai), Ellen (taking the lead), Wouter-Jan (full of wonder), Nicola (il Migliore), Lotte (the chemist), Claudia and Pedro (the other Portuguese gus), Sabine and Paulien (always together), Nathalie (damsel in distress), Gijs (inexhaustible), Tim (happy to help), Julian (the married man), Adamantia (efcharisto poli), Marijke (super structured), Wouter (go with the flow) and Kelly (training every day) and thank you ever so much for choosing me as your daily supervisor and of course for your indispensable contribution to this dissertation, a number of scientific publications and most of all for the fun times!

Where would I be without my colleagues? First of all, thank you ever so much Marya de Jonge for your help and support in many different respects and for having a clear opinion on any matter at hand. Anne Appeldoorn, Marcel de Vries, Erwin Wilbers, Jan-Henk Marsman, Leon Rohrbach, Hans van der Velde, Albert Voortman, Evgeny Polushkin and especially Gert Alberda, thank you so much for all your help in setting up and performing the many different experiments described in this dissertation. Of course I want to say thanks to my office mates that made my stay all the more
Thermoreversible cross-linking of rubber

pleasant. Inouk, Jos, YiFei \textit{(also for all the nice badminton games)}, Cynthia (and your family for all the glassware) and Maria \textit{(also for introducing me to the Latin group and associated parties)} and finally Rodrigo \textit{(although we already had a longer lasting friendship and scientific collaboration)}. A special thanks to the Wonderfucks! Patrizio \textit{(co-supervisor of many students)}, Pablo \textit{(all or nothing)}, Esteban \textit{(narango)}, Monique \textit{(nerdy Brazilian Beauty)}, Idoia \textit{(the most wonderfuck of all)}, Valerya \textit{(the Dancer)} and Alessandra \textit{(grossa culone)} thanks for the many evenings we will not talk about. Martijn, without your distractions this PhD project would have been finished a lot earlier, but I have to admit with a lower scientific quality and while having a lot less fun at work. Thanks for willing to be my paranymph. Zheng, thank you so much for your enthusiasm and support in everything I come up with! Also I would like to say thanks to Diego \textit{(for setting the bar high)}, Henky \textit{(for your introduction in UNPAR)}, Susanti \textit{(the best lab-mate I could wish for)}, Paolo \textit{(for our philosophical lunch discussions)}, Ionella \textit{(for taking over my job as PA)}, Jun, Claudio, Arjan, Bilal, Henk, Jan-Willem, Eric, Joost, Lydia, Yin, Prima, Frita, Ria, Louis, Angela, Erna, Niels, Patrick, Ilmi, Iqbal, Zhenchen, Fachri, Anna, Tim, Shilpa, Zarah, Arne, Agnes, Arjen, Bahwan, Frank, Yasser, Douwe Sjirk and all other colleagues in the department! All of you helped in creating a great atmosphere in the department and were largely involved in many interesting discussions and some fascinating ping-pong and futsal matches.

As the world-famous Bernoulli lounge was right opposite of my office, I was unable to resist participating in the many fun coffee-breaks, borrels and activities that took place with many different students. A special thanks to the four boards of Bernoulli during my PhD: Jilles, Jacob, Hessam, Jasper, Annienke, Tim, Arjen, Tim, Marc, Henk, Minke, Marte, Loes, Martine, Johnny, Jesper, Jasper, Bas, Martijn, Thiadrik en Folkert! Because of you I have seen Bernoulli growing from being an almost dead attachment for the department to a lively and active student association with ever more members. Of course I would also like the many members of Bernoulli for the many (scientific) discussions and drinks. A special thanks to Arnold, Lucas, Graham, Ibie, Leonie, Jasper, Tim, Vivi, Karen, Dian, Fenna and Alessandra for your involvement and some of the more interesting conversations.

I also received a lot of help and support from outside the faculty over the last four years. I want to take this opportunity to thank some of my closest friends personally for their ever lasting support. Robin \textit{(my main reason for studying chemical engineering)} and Tom \textit{(my main reason for finishing it)}, there is a good reason you two are my ‘best men’. Sim, thanks for your time and effort to understand my (ever so complicated) situation and for being my paranymph. Elske, thanks for being such a great friend (even over such a great distance) and for allowing me to help you with some fieldwork for your PhD (in Hawaii!). Walter, thanks for our long-lasting friendship. Martin and Eljee, thanks for keeping me interested in science. Selma, Ece, Matea and Meliana, thanks for the deep conversations and for motivating me with
Acknowledgements

your exemplary and pure intrinsic motivation for doing science. Nyn, thanks you're your enthusiasm and loyalty. Maarten, thanks for your wise words. Bas and Sanne, thanks for helping me relax in stressful periods. Ilse and Edo, thanks for pushing me to keep fit. Kitty, Thijs, Cathelijne, Dirk and Daan, thanks for the most epic parties (absinterkerst) every year. Nienke, thanks for your youthful energy and enthusiasm. Maaike, Daniel, Ron and Jody, thanks you so much for showing me that growing up and living an ‘adult life’ may not be so scary after all. From the start of my studies and throughout my PhD there has always been Forza: never hesitant to help with the termination of a number of brain cells and helping me to “zoom out” of the project and allowing me to explain everything I do to a group of people with the lowest possible attention span. Thijs, Hugo, Daan, Floris, Nick, Freerk, Tsjerk, Casper, Peter, Bart-Jan and Sander, thanks for helping me out in Dublin on my way to Berlin. Sam, Liseth, Andy, Rianne, Fieke, Janita, Joris, Jasper, Marco and Fransien, thanks so much for your lasting friendship and for being my peers as a bunch of academic intellectuals who keep on showing me why I do what I do.

Most of all, I am eternally grateful for all the love and support I received from my parents Josef and Annelies (teaching me how to fly), my sisters Juliette and Annemarie and my fiancé Liselotte (showing the value of staying on the ground) and her family (thanks Dolf, Mirjam, Jeroen, Josephine, Friso, Henk and Adri). I cannot find the words to express my gratitude for your tireless support and motivation. Without you I would never have brought an academic study to a good ending in the first place, let alone a PhD! Mom and dad, you always supported me in every decision and advised me on solving the problems I created by making those decisions. Liselotte, you broadened my horizons and always helped me making the right decisions. Without you, I am lost.

Finally, I would like to thank you as a reader for your interest in my work!

One love,

Laurens
