Liquefaction of Humins from C₆-Sugar Conversions using Heterogeneous Catalysts

YUEHU WANG
Liquefaction of Humins from C₆-Sugar Conversions using Heterogeneous Catalysts

PhD thesis
to obtain the degree of PhD at the University of Groningen on the authority of the Rector Magnificus Prof. E. Sterken and in accordance with the decision by the College of Deans.

This thesis will be defended in public on
Friday 17 March 2017 at 16.15 hours

by

Yuehu Wang
born on 18 April 1980 in Guizhou, China
Table of Contents

1. Introduction ........................................................................................................ 9
  1.1. The Biorefinery Concept ........................................................................... 11
  1.2. Platform Chemicals from Biomass ............................................................ 12
  1.3. Biobased chemicals: 5-Hydroxymethylfurfural (HMF) and Levulinic Acid (LA) ..................................................................................................................... 15
    1.3.1. General .................................................................................................. 15
    1.3.2. Synthesis and production of HMF ......................................................... 15
      1.3.2.1. Synthetic procedures ........................................................................ 15
      1.3.2.2. Commercial status HMF production ................................................. 17
    1.3.3. LA synthesis and production .................................................................. 18
      1.3.3.1 Synthetic procedure for LA ................................................................. 18
    1.3.4. Humins: molecular structure ................................................................. 19
      1.4. Humins: molecular structure ................................................................. 19
      1.4.1. General features ............................................................................... 19
      1.4.2. Soil humins ....................................................................................... 20
      1.4.3. Structural features of humins from sugar conversions ....................... 22
      1.4.4. Structural models for HTCs ................................................................. 23
      1.4.5. Structural models for humins from acid catalysed sugar conversions ...... 24
    1.4.6. Valorisation of Humins ........................................................................ 27
    1.5. Scope and Outline of this Thesis ............................................................. 30
    1.6. References ............................................................................................. 32
    2.1. Introduction ............................................................................................ 41
    2.2. Results and Discussion .......................................................................... 49
      2.2.1. Preparation and purification of humin samples .................................... 49
      2.2.2. Formation of humin by-products ....................................................... 50
      2.2.3. Elemental composition of humin by-products ...................................... 53
      2.2.4. Morphology of humin by-products .................................................... 54
      2.2.5. Characterisation of liquid phase products .......................................... 56
      2.2.6. Molecular structure: Characterisation by IR and NMR spectroscopy and Pyrolysis/GC-MS .......................................................... 58
    2.3. Conclusions .......................................................................................... 67
    2.4. Experimental Section ............................................................................ 69
    2.5. References .......................................................................................... 71
    2.6. Supporting information .......................................................................... 74
  3. Exploratory catalyst screening studies on the liquefaction of humins from C6 sugar biorefineries ......................................................................................................................... 77
    3.1. Introduction ............................................................................................ 79
    3.2. Materials and Methods ......................................................................... 82
    3.3. Results and Discussion .......................................................................... 87
      3.3.1. Catalyst characterisation for the metal on carbon catalysts ................ 87
      3.3.2. Exploratory catalyst screening studies for noble metals on a carbon support ......................................................................................... 88
        3.3.2.1. Product phases ............................................................................... 88
        3.3.2.2. Humin conversion ........................................................................ 90
  Supervisor
  Prof. H.J. Heeres
  Assessment committee
  Prof. A.A. Broekhuis
  Prof. F. Picchioni
  Prof. K. Seshan
4. Catalytic Liquefaction of Humin Substances from Sugar Biorefineries with Pt/C in 2-propanol

4.1. Introduction
4.2. Materials and Methods
4.3. Results and Discussion
4.3.1. Benchmark experiments
4.3.2. Systematic studies using Pt/C and IPA
4.3.2.1. Humin conversion
4.3.2.2. Liquid yield
4.3.2.3. Alkylphenolics yield
4.4. Conclusions
4.5. References
4.6. Supplementary information

5. Catalytic hydrotreatment of Humins in Formic Acid/2-Propanol mixtures using supported Ru catalysts

5.1. Introduction
5.2. Materials and methods
5.3. Results and Discussion
5.3.1. Screening experiments
5.3.2. Composition of the gas and liquid phase for catalytic hydrotreatments with Ru/C
5.3.2.1. Gas phase composition
5.3.2.2. Liquid phase composition for experiments with Ru/C
5.3.2.2.1. Elemental composition of the humin oils
5.3.2.2.2. Molecular composition of the humin oils
5.3.2.2.3. Catalyst support effects
5.3.3. Reaction pathways
5.4. Conclusions
5.5. References
5.6. Supplementary information
