A computational cognitive modeling approach to the development of second-order theory of mind
Arslan, Burcu
Acknowledgments

Dedicating four years of your life to a specific goal has both psychological and technical challenges. I was extremely lucky that I was surrounded with great supervisors, colleagues, friends and family who have always been supportive. Otherwise, neither this dissertation could have been in its current form nor could my mental state. I hope I have found a way to show my appreciation over the years but hereby I would like to take the chance to thank them all officially.

First of all, I would like to thank my supervisors Rineke Verbrugge and Niels Taatgen for their continuous support:

Rineke, it would take me to write another book if I tried to acknowledge all of your contributions to this dissertation and to my scientific and personal growth. I am sure that all the people who know you and reading this acknowledgement would agree with me that you are a role model for many people in academia both in terms of your scientific achievements and also in terms of your personal qualities. It was a privilege to be your PhD student. I have learned a lot from you. You always made sure that I improved my technical and transferable skills. I started my PhD with a great motivation; however, there were dark moments that I was discouraged by the academic review system but your positive attitude and support made me perseverant. You always found time to read and give feedback to the drafts of our papers repeatedly. In addition to the explicit feedback you gave, I took every chance to learn from you by observing you in our meetings and in other events. While you were involved at each step of this dissertation, you gave me the freedom to develop and implement my own ideas. You supported me to attend many national and international conferences and workshops, which helped me expand my network. I do not know how you initially decided to offer me a PhD position at your group; however, I do know that carrying out research under your supervision is the best thing that happened to me and I tried my best not to disappoint you. Thank you for “everything” [that you have done for me].

Niels, the first course that I took in my MSc in Cognitive Science programme was “Computational Models of Mind” and the first couple of papers that I read were yours and John Anderson’s. Those papers were what made me fall in love with computational cognitive modeling. I was amazed by your perspective on complex things and how simply you explained them. Later on, I had the chance to be your PhD student, thanks to Rineke. From the first day that I started my PhD, I was hung up on your every word during our meetings and CogMod meetings in
order to learn from you as much as possible. Although we haven’t spent so many hours working together as much as I spent with Rineke, your input was always very useful and to the point. You were and still are one of my scientific idols.

There is someone that I would like to thank right after my supervisors: Harmen de Weerd (a.k.a. Harmish the General Problem Solver). My unofficial daily supervisor, paranymph, colleague, friend, and Zumba buddy. During these four years, I do not know how many times I came to your office to ask technical questions, to get your opinion about my research, to discuss my results, papers, or just to share something that I was happy or sad about, to kindly ask you to translate the stories for my experiment and the Samenvatting of this dissertation from English to Dutch and vice versa. There was not even one instance out of those uncountable instances that you did not have time for me. More importantly, you never made me regret that I got your opinion and I shared something with you. You are a very smart and intellectual person. However, these features are nothing compared to how kind, humble, gentleman and open minded you are. I hope life will treat you well and you will always get what you want. You should know that you have unlimited credit on my mental card and I will be there whenever you need.

There is also another person who has supported me since my master’s thesis and who deserves special acknowledgement – Annette Hohenerberger. Annette, we have been working closely for six years by now and your support was invaluable. I have started to learn about cognitive development and human memory from your courses. You supervised my master’s thesis together with Rineke and we continued to work together during the last four years in order to publish a paper in which you were one of the co-authors. You, Rineke and I had many meetings together over Skype. During those meetings, you always encouraged me and always provided useful comments. We got upset together when we received rejections and we celebrated together the good moments. You always found time to write reference letters for me and I was moved when I read them. I am very lucky to know you. Thank you!

I also would like to thank my reading committee members Petra Hendriks, Maartje Raaijmakers, and Lael Schooler for spending their valuable time to read my dissertation.

I was very lucky to be a member of two groups in our department: Social Cognition Research group and Cognitive Modeling group. I want to thank the members of our Social Cognition Research group Ben Meijering, Daniël van der Post, Jakub Szymanik, Harmen de Weerd, Stefan Wierda, and Rineke Verbrugge. During our meetings, we read and criticized many papers about theory of mind from different perspectives, such as logic, comparative psychology, multi-agent systems, developmental psychology and computational agents. I have learned a lot from all of your comments and insights. I also want to thank Cognitive Modeling group members Ben Meijering, Christopher Stevens, Enkhbold Nyamsuren, Fokie Croonen, Hagit Shaposhnik, Hedderik van Rijn, Joanna Katidioti, Jacolien van Rij, Jelmer Borst, Katja Mehlhorn, Katja Paul, Margreet Vogelzang, Marije van Vugt, Marijke Beulen, Menno Nijboer, Niels Taatgen, Stefan Huijser, Stefan Wierda, Oscar Valmuel and Trudy Buwalda for their useful comments about my research as well as my presentation skills. I would especially like to thank Trudy, Harmen, Jelmer, Niels, and Rineke for joining my mock interviews and providing me useful feedback repeatedly and thanks to Enkhbold and Ben for their useful comments on my first computational cognitive model when I started my PhD.

During the last four-years-and-a-half, I had different officemates. I want to thank Jakub, Bea, Ben, Sujata, Gyuhee, and Yuri for being very nice company in the office.

One of our experiments took almost two years starting from designing the experiment to the completion of testing the children. It would be impossible to realize our training study without the support of Bart Hollebrandse, who is one of the co-authors of our training paper and who helped us to find a school to run our experiments, and kindly accepted our request to use his version of second-order false belief task. Thanks to the Joseph Haydn School in Groningen and the students’ families who allowed us to conduct our training study; Avik Kumar Mastra, who is the illustrator of the stories; Maximilian Seidler, Amélie la Roi, Bram Wiggers, Marlies Hoeckstra, Marten Schutten, Merel Wiersma, who tested children; and last but not least Bea van Meerveld, who is the voice of the stories that was used in our training study. We spent many hours together in the studio, Bea. We also shared an office for some time and had dinners together. It was very nice to have you around.

I also would like to thank John Anderson and Christian Lebiere for inviting me to Carnegie Mellon University and for their hospitality during my short visit to Pittsburgh, and to thank Educational Testing Service R&D team for their hospitality during my short visit to Princeton. Thanks to Irina Polyanskaya, Torben Brainer and Patrick Blackburn for sharing their comments about our work, for inviting me to their workshop in Denmark and for their hospitality.

I would like to thank Jennifer Spenader, Nicole Baars-Verbrugge and Stefani Nellen for inviting me to their houses in multiple occasions and making me feel
very welcome. I especially would like to thank Jennifer for giving me a hug in one of my darkest moments and for knocking on my door from time to time just to say good morning or to share something that made her happy.

I want to thank my former and current colleagues/friends in Artificial Intelligence Department Ana Bosnic, Aswin van Woudenberg, Ben Wolf, Bo wormrat Sriman, Faik Karaaba, Marco Weiring, Sheng He, Stippe Pandzic, Olarik Suriata, and Pry Mania for all the lunches and coffees that we had together. Special thanks go to Ana for all the other fun times we had together.

I would like to thank faculty secretaries Elina Sietsema and Carlijne de Vries, who were always very helpful and kind. I really appreciate all your support.

Joanna Smolonska who worked for the cover and layout design of this dissertation also deserves special thanks. Thank you for taking care of all the little details patiently.

Being an activist has never been one of my characteristics. That is why, I always appreciate the people who speak up for improvements. I would like to take the chance of thanking Catarina Dutilh Novaes, Deniz Başkent, Fokie Cnossen, Justine Jacot, Nina Gierasimczuk, Olivia Guest, Petra Hendriks, and Rineke Verbrugge who put effort to make women visible in academia. I especially would like to thank Olivia Guest. Even though we met only once five years ago at a conference, your friendship and support has been significant.

I also would like to thank my former professors from my master’s studies at the Middle East Technical University; Didem Gökçay, Murat Perit Çakır, Ceyhan Temürçü, Bilge Say, Cem Bozşahin, and Annette Hohenberger from whom I have learned a lot about cognitive science.

After spending many hours at work by thinking about new ideas and trying to improve your technical skills, it is very important to have a relaxing environment at home and not to have any troubles. I would like to thank my landlord, John van Bergen, for his contributions to keep my mind in peace during my three and a half years at his place. Probably, it is the first time that a PhD thesis acknowledgment includes a landlord and you might think that I overdid it. However, considering the fact that another landlord destroyed my mental health, which had an impact on my academic performance, I think it is important to thank John for being a great landlord.

Bearing in mind that I have spent more than 30 years of my life in a big city, living in the city centre of Groningen was an amazing experience for many reasons. No stress because of the traffic jam; after stepping out from your apartment all the shops/cafes/bars are around you; you always come across a friend and have unplanned drinks together; you get your coffee without saying a word except “hi”, thanks to Starbucks barista; you have a specific store that knows your fashion style and you get what you want without even looking at the options, thanks to the ladies at the Betties Creative Casuals.

As an only child, I have always been into my friends more than an average person. Living in Ankara for 32 years, I have been friends with Anıl, Can, Nihan, Serhan, Sertaç (karrrrdeğşşimm) and Ülge more than 10 years and with most of them more than 20 years. We had spent almost all of our free time together, we had been together when we had our first experiences in life, we had died from laughing together and then came back to life from our ashes. You have all significantly contributed to the person who I have become. Although we are living far away and we don’t see each other often, knowing that you are and will always be there for me makes me feel at home wherever I go. Special thanks go to Ülge.

Ülge, it could have not been possible to be titled as a PhD or even an MSc without your support. You have always believed in me more than I have believed in myself and you have always supported me (or forced me to) to push the boundaries of my knowledge and skills. Starting from my master’s studies, you have corrected uncountable emails, assignments, reports and papers that I wrote, both in terms of their content and also in terms of language. If someone asks you what theory of mind is, I know that you will give a definition by heart. Not only intellectually but in many different aspects of my life you always make sure that I have the best possible outcome including but not limited to the effective usage of my 20m2 place. You visited me here multiple times and you have become a real fan of Groningen, Martinitoren, oliebollen and bitterballen. I don’t know how you managed but the most of the shop owners recognize you and give you free products, such as oliebollen. We travelled to many countries in Europe and to the United States together and accidentally hit our heads to each other’s multiple times (dumb and dumber). We had talked over the phone 1000 hours about politics, philosophy, art, design, caricatures – to which I have never been able to laugh except a couple of those, artificial intelligence, economics, society, geography, history etc. If we had published online all those conversations as a podcast, I think, we might have had many followers. In addition to the intellectual and fun times, you have always listened to all of my problems, tried to calm me down when I was sad or angry, and sacrificed yourself and became my stress ball time to time.
Importantly, you also visited, called and helped my family when I was away from
them. You are the most intellectual, diligent, gracious and brave (of)person that
I have ever known. Thank you for putting up with me. Prepare yourself for the
long trips to the US. Cap toujours! |*

Leaving all the above-mentioned friends behind and starting a new life in
Groningen was an emotional challenge. However, there is one person, who has
such a unique personality, made this challenge significantly easier starting from
the day 1 – Ioanna Katidioti (a.k.a Greek Goddess). When I came to our depart-
ment for the first time, you were the one who was really interested in who I am.
You were the one who first invited me for dinners and drinks. You were the one
who immediately understood what I wanted to say even though I wasn’t used to
speaking in English fluently. You introduced me to your boyfriend (Morak, so cu-
uute!), friends, family and Zizi, who have also become my Morak, my friends, my
family and my Zizi over time. You made me laugh 24/7 (or 7/24, or 74/7) at work
by your presentation skills and at other times by your unexpected comments
in between conversations (e.g., London, PhD, vlaxoutsa). You were the one who
bought me dolma without any reason (except you love me a lot!) and brought
me presents whenever you went abroad. You were the one who gave me some
extra points and took some of them back time to time. You were the manager of
the line. You were the one who gave me limited number of coupons for literally
scratching my back but who scratched my back unlimitedly anyway. We blurred
together our vision and said “volgende volgende” when it was necessary. We were
each other’s +1s in many social activities. We went to spa and massages together
and I impressed you with my dolphin skills. We entertained each other at Zumba,
so on and so forth. In summary, you made both my work and my social life more
fun. The fun times that we spent together aside, you have always been there when
I was upset. I still do not know how you manage to be with me whenever I need
when you are reading more than 60 books a year, going to Zumba, Capoeira and
dance classes five times a week, watching all the TV series, and joining almost
all social events. Although you don’t literally put it into words, you always found
a way to make me feel special. If I would write a novel about our times together
until now, the title would be as follows: ‘Greek Goddess facilitates and I predict
the development of Groningen: An evaluation of fashion weeks.’ To conclude, I
feel very lucky to have you in my life and I really appreciate that you appreciate
that I appreciate you. As you predicted in your acknowledgements, it seems like
we will be indeed in the other parts of the world – at least for a while. However,
Shante, you stay [with me].

I also would like to thank to Stephan (a.k.a. Morak) for visiting me when I was
sick, for coming to my place to catch a mouse immediately after I called him, for
our many drinks, and dinners together.

Now, it is time to thank my other Greeks: Fotini, Konstantina, and Sissy. We had
a lot of fun together and shared so many things. I always enjoyed spending time
with you. You definitely made my time in Groningen a lot better. I am glad to
know you all!

Last but not least, I would like to thank Stephanie for our traditional Friday even-
ing RuPaul sessions, for being there for me at 3 a.m. when I first saw a mouse at
my place and for letting me crash at her place, for our nice trip together to Lisbon,
for many dinners, drinks and bорrelс together and for sharing her interesting sto-
ries and making me laugh. I am glad to know you!

I would like to thank Ahmet & Cansu, Alex, Aliki & Yiannis, Andre, Arman,
Christos, Cyrus, Eva, Guiila, Gyhuee & Michiel, Ina, Juan, Meniz & Yiğit, Michela,
Pınar & Seçkin, Reto & Tonia, and Turhan for all the drinks, dinner, and parties
we had together.

I also want to thank to Konstantina, Neşe, Setenay, Sertaç, Tunahan, Yasemin &
Deniz for visiting me in Groningen.

I would like to finalize this long Acknowledgments section by thanking to my
mother Güzin, my father Veysel, my aunt Deniz, my uncle Metaj, my cousin
Tunahan and my grandparents who have always supported me and loved me
unconditionally. I especially thank my parents for all their sacrifices in order to
make sure that I had the best education that I could get and I had all the other
opportunities that they couldn’t have; for never judging who I am; for letting
me be out of the norms and for their trust in me. I dedicated this dissertation
to my grandparents, Sevińç & Şeyh Ömer Kal and Nazlı & Mehmet Arslan.
Unfortunately, only one of my grandparents is alive to read this and be proud of
me. Grandmother Sevińç, you are the best and most fun grandmother for sure!
I love you all!

Bu uzun Teşekkür bölümünü beni daima desteklemiş ve koşulsuz olarak sevmiş olan
annem, babam, teyzem, eniştem ve züriyetin ile anneannem, babannem ve dedeler-
ime teşekkür ederek tamamlamak istiyorum. Anneme ve babamına, mümkün olan en iyi
eğdipli almam ve kendilerinin sahip olmamı düşen tüm olanaklara sahip olmamı
saglamak adına yapmış olduklarını tüm fedakârlıklar için; beni asi야 yargılamladıkları
