Acknowledgements

My four-year adventure towards accomplishing this thesis can be geographically and mentally subdivided into two separate but closely interconnected halves: Groningen and Pavia.

Groningen
Groningen has been my second home since I had finished university 10 years ago to embark on the study abroad. After not having been too much successful with my first PhD position, I virtually thought that academia was something perhaps not best suited for me. Nevertheless, now whenever looking back, I am highly grateful for such an experience as it has allowed me to truly appreciate how joyful a graduate life can be: that is the one led to this dissertation. First and foremost, I’m deeply and eternally grateful to my first promotor, without whom all of these would have been impossible. Dear Marco, thank you for accepting me as a group member and for your unending support over these years. You can impressively combine insightful skills and knowledge of a critical scientist together with an exceptional coaching approach, which invariably kept people around you happy and motivated, including me. Not only did I learn a lot from you how to perform research, but most essentially how to look at life with an inherently positive, relaxing mindset (which I had strived for years with Zen Buddhism, though I am pretty sure you don’t need to practice it at all). Thanks also to your almost always rapid feedbacks, availability for queries, and peerlessly fast corrections for all manuscript versions. Last but not least, I am grateful for letting me know the Pavia clan, where I spent one of the most cheerful time in my life.

I owe my gratitude to the members of the reading committee: Prof. Willem J. H. van Berkel, Prof. Nigel S. Scrutton, Prof. Paola Iadarola, and especially Prof. Gerrit J. Poelarends for reviewing this thesis. Dear Gerrit: many thanks for your constructive comments to improve the thesis and above all, for having brought me to the world of enzymes and how they can serve for the pharmaceutical field, and of course for your enthusiastic guide when I looked for a graduate position.

My deep gratitude to my paranymph and dear brother Hemant. Thanks for collaborating with the highly challenging yet inherently exciting F420 project, for the endless remote support from Groningen when I moved to Pavia, for our successful FNO paper which allowed me to have chapter 5. But most importantly, for your everlasting smile and immortal calmness.

My sincere thanks to Ana and Irfan for being my teachers, advisors with all the molecular biology and protein techniques when I started. Thanks for your unflagging enthusiasm and patience especially with designing primers and analysing SDS gels.

Dear Cyntita: my warm thanks for being my trusted friend and irreplaceable officemate. Your vitality, your permanent delight, your brightest (innocent)
smile when calling me “Thaï-to-chan” really helped me a great deal through my darkest time in Groningen. Dear Misun: thanks for sharing a lot of stories, food, assistance with the HPLC, and above all for your exclusive Asian grace. Dear Antoine, thanks for your warm intimacy and especially your generosity in hosting my farewell party.

Dear Willie: Thanks for your being exceptionally organized with the coolest Dutch style. What I find you admirable is your ability to put on so well many hats—a great researcher and a talented artist. Of course, without your flawless initiation on the alcohol oxidase project, chapter 2 wouldn’t have existed. Also, for your excellent Dutch translation of the thesis summary and information.

Caro Alejandro: thanks for sharing experience with me since our first terrifying lab, till the happy moments here, and for making me accustomed to the Italian style with your outstanding flirtations skills. Your utmost determination and bravest career shift has strongly impressed and inspired me. Dear Mazena: my warmest gratitude for being my incomparable peer and being (at times) so warm and uniquely special. Thanks you two for our adventurous Asian trip; it was perhaps the most wonderful time I’ve ever experienced.

Dear Elvira: thanks for your passion, hard work, and commitment for science. My gratitude for your excellent guide on the stopped-flows, your spectacular experience on flavoenzyme kinetics, and most importantly, your restless working style with all the emails invariably sent around 2–3 am. Dear Max: your friendliness is just amazing, together with Nikky, thanks for taking care of my Italian fellows and making their time in Groningen unforgettable. Also your German diligence is just as equally impressive as your exceptional creativity. Nikky—the most ingenious and gifted guy—thanks for your endless cheers, for being the number one source of wise advice and useful information on all scientific matters. Thanks for visiting Pavia with Ivana and enabling me to truly explore the city after having been staying there for several years.

Dear Christiaan, thanks for being so helpful and for your patience in monitoring my lab-coat, my lab-shoes and for your everlasting effort to maintain a tidy lab: there is no doubt you are among the most calm technicians I have ever met! Dear Piet: thanks for all your incredible expertise with machines and computers; what I have learnt from you is just invaluable. And Sandra, my sincere thanks for excellently handling all my administrative issues.

Dear Friso, thanks for being my first student in Groningen and your great enthusiasm on the $F_{420}$ project, and being an extremely pleasant colleague later. Gianluca: thanks for your hard work and skillfulness on the $F_{420}$-dependent glucose-6-phosphate dehydrogenases, which has finally turned into a nice chapter for this thesis. My gratitude also to Evelien and Hans-Jörg for your generosity in sharing the rhodococcal expression system.

My warm thanks to other group members: Hania for your assistance, calmness and apparently for your magnificent cocktail preparing skills; Hugo for your outstanding cleverness on all matters, especially your famous work motto that I’ve been always advertising wherever I go: “Before doing an experiment, let us think how to avoid doing it”; Malgorzata for your instruction on various equipments and for your unrivaled Polish attractiveness; Patrícia and Aline for our joyful chats on countless topics; Nina for your endless source of exotic German chemical supplies
Acknowledgements

and the unbelievable German beauty; Dana for your exceptional calmness and our great time organizing the labuitje; Suzan for our intimate collaboration on the alcohol oxidase project; Matt for your unique American accent and coining the “Thai-ger” figure for me; Marleen for being so kind and helpful, thanks so much for your support with the recommendation letter; Elisa for your Italian sound intensity within a Dutch environment and the Christmas apericena; Mohamed for your good cheers and your expertise with the FireSting; Peter, Yaser, Edwin, Hein, Hesam, Marcellito, Goeffrey, Arne, Bian, Robert, Geeske, Jonathan, Jeroen: thank you!

Last but not least, my lab-mates Ivana—the most pretty Slovak colleague I’ve ever known—and Manu—the cutest Italian girl of the lab 14.129 with the wildest charm—thanks for your distinct beauty that created an amazing lab atmosphere. Gonzalo, thanks for your outstanding chemistry data on EUGO and our online communications which led to my first experimental article. Laura, thanks for your phylogenetic field on the F_420-enzymes and our interesting intercontinental Skype meetings, hope that together with Hemant’s work, it will mature into a nice paper soon. My thanks to also Jeffrey, Brenda, Sonja and other colleagues in the corridors for our enjoyable small chats, hope to see all of you again.

Many thanks also to my Vietnamese fellows for supporting me all over the years: be Gia, be Duong, chi Thao, Hao, anh Hieu, Thang, Lam, be Ha Lan, anh Ha, anh The Anh, chi Maria,... thank you all for contributing to my memorable life in Groningen.

Pavia

Having visited Pavia the first time in 2013 in a gloomy, rainy day, I didn’t know what to expect for my life in this southern European city in the following two years. Nevertheless, now I must admit that I definitely share the same view with Marco, who took me there at that time: if I ever have another chance to go abroad, for sure I would like to go back to Pavia!

My most sincere and deepest gratitude to my Italian promotor who made my time in Pavia a real pleasure. Dear Andrea, thanks for accepting me as a member in the BioCry family and for all the tireless support during these last years. You simply have pitch-perfect instincts on all scientific matters. What amazed me is your remarkably broad interest across various research fields ranging from biology to chemistry, and your distinct ways of viewing things with the unique sharps eyes of a high-profile scientist. Also, as a counter-balance to the Dutch strictly scheduled meetings, I enjoyed much of your daily by-bench or coffee break discussions on countless topics. I have learnt a lot through your impressive ability of interpreting the data, and how to logically locate them in a biological context. Last but not least, for your generosity to let me have a cheerful stay in your college.

Dear Claudia, my babysitter if I have to describe, no word can fully express my gratitude for your assistance on everything, from opening a bank account to the crystallographic knowledge and various stages of all the manuscripts. Also for offering me a priceless spot in your office where the largest portion of this thesis was written. My eternal thanks for your faith, generosity, and great patience.
A debt of gratitude to Federico: Dear Fede, thanks for your genuine enthusiasm, your superb guidance, your always up-to-date research strategies, your irreplaceable helping hands on endless technical and theoretical issues I have encountered. It’s perhaps hard to believe but half of the structural data described in this thesis wouldn’t have come to exist without your exceptional skills during the data collections. And most importantly, the inspirations I took from you—the most ingenious and gifted young scientist. Thanks for everything!

Figone Simone—my paranymph and a trusted friend: my greatest thanks for your kindheartedness, your acceptance being my paranymph, reading and checking the proof, going through many trips together, and for many other things there is perhaps no space to write out all here. You had been an excellent teacher on crystallization, showed me how a prototypical Italian model with a supreme elegance should look like. And above all, for an endless source of fun when combining with the other extreme from FFN for the $R$.

Dear Paoty, thanks for being the dearest friend with whom I can share everything happening. You had been an outstanding assistant in all Italian related matters (in particular making appointments with Tony), in helping with my migrating to Pavia, in supporting me in the lab. Essentially, to exemplify the career path of a talented young researcher in academia. And of course, for your significant contribution to the splendid beauty of the group ladies. Our time in Thailand was extremely pleasant and my visit to Dortmund was just wonderful!

Zio Filippo, a.k.a. FFN, it was a real fun to know you in Thailand and your famous nickname; the intensity of the fun just exponentially increased in Pavia. Although it took me a while to recognize your spectacular Piacenza accent, it didn’t hamper me to fully benefit from that time on. Thanks for being a permanent source of cheers, for accompanying many lunches in the mensa, for your hospitality when I visited Pavia, for your perpetual good temper, for your fast and excellent Italian translation of the thesis summary, and for our unfading friendship.

Dear Arianna, thanks for being my most special Italian student, for your particular charm, wisdom, cheers, for your full dedication in the work which contributed a great deal to this thesis. Dear Stefano Ros., thanks for being exceptionally smart and for your genuine interest in science. My best wishes for you two in your academic career.

Dear Kaouthar, thanks for being my best friends, for all the coffee breaks, the chats, and for the enjoyable Pula trip we had with Damien and the naughty Jijino.

Dear Rubén, thanks for being my personal advisor on various subtle matters and the inspiration for the propositions, and obviously for your outstanding reporting skills for the ROBOX project. Dear Stefano, thanks for all your assistance with all the lab and bureaucratic stuffs, with the robots, and most importantly, for your true intimacy.

I would like to acknowledge Tom from WUR for involving me in the vanillyl alcohol oxidase project and for a lot of useful tricks on flavoprotein oxidases. Also other staffs from the department: Rosalba, Betty, Costa, Rafaeella, Claudia for the tireless assistance.

My warm thanks to other group members: Francesca, for your passion, hard
work and insightful skills with GraphPad; Nencino, for your outstanding knowledge on computers and Äkta; Valentina S., for your intimacy and source of information; Simona, for your dedications to the lab and your classical-model-like photo; Elisa, for your friendship and being a strong girl; Chiara, for your unrivaled creativity; Biagina, for your subtlest Italian grace; Marta, for your supreme beauty that can hardly be found in any sorts of labs in the globe; Joana, for being a great friend who share the music preference of our age; Luca, for your impressive whispering skill (and the unforgettable trip to Certosa together with FFN, Biagina, Marta, and Joana); Martina, for your kindness, faith and honesty; Matteo, for your piadina and a lot of cheers; Gigino-chan, for your help with the Oxygraph and your restless dynamics; Antonella, for truly understandings and endless enjoyable chats; Anselmo, for your peerless British accent. Lenka, Andreita, Aristotele, Peppe, Salvatore, Alex, Rosella, Gaia, Franceschina, Vanessa, Sara, Marta M., Margherita, Rene: thank you all!

My gratitude also to the Vietnamese group in Pavia: be Nhung, be Hien, be Tra & Tuong (also for giving me a hand with LaTeX), be Thu Anh, be Vu,...

In the end, my deepest gratitude to my family in Vietnam being there for all long supporting me...

Thái.
