Mechanistic journeys into lipid metabolism

Federico Oldoni

The research described in this thesis was performed at the Department of Pediatrics, Section of Molecular Genetics, Faculty of Medical Sciences of the University of Groningen, The Netherlands. The research group participates in the Groningen Institute for Drug Exploration (GUIDE). This work was supported by funding from the Netherlands CardioVascular Research Initiative (CVON2011-2016; Acronym Genius), the European Union (FP7-603091; Acronym TransCard). Jan Albert Kuivenhoven is an established investigator of the Netherlands Heart Foundation (2015T068). Partial funding was provided to Federico Oldoni by Jan Kornelis de Cock Stichting. The work described in Chapter 6 was carried out at the Department of Cardiovascular Genetics, Institute of Cardiovascular Sciences, University College London, London, UK and was supported by the British Heart Foundation.

Printing of this thesis was financially supported by:

University of Groningen, Groningen, the Netherlands;

University Medical Center Groningen (UMCG) , Groningen, the Netherlands;

Groningen University Institute for Drug Exploration (GUIDE), Groningen, the Netherlands

Mechanistic journeys into lipid metabolism

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. dr. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on Monday

16 October 2017 at 11.00 hours

by

Federico Oldoni

born on 13th June 1986
in Lodi, Italy

Supervisors

Prof. J.A Kuivenhoven

Prof. R.J. Sinke

Prof. A.J.A. van de Sluis

Assessment committee

Prof. J. Heeren

Prof. M. van Eck

Prof. R.A. de Boer

*This Ph.D. dissertation is dedicated to my
lovely Grand Mother Amabilia who
always encouraged me to pursue
my dreams...*

Paranymphs

CONTENTS

Chapter 1	General introduction	9
Chapter 2	Mendelian Disorders of High-Density Lipoprotein Metabolism	33
PART 1	Novel insights on the regulation of blood lipid levels - Known and newly identified receptors	81
Chapter 3	Naturally occurring mutations in human <i>LRP1</i> affect HDL metabolism through ABCA1 and SR-BI	83
Chapter 4	G protein-coupled receptor 146 regulates blood lipid levels in mice and humans	125
PART 2	Factors affecting HDL maturation and HDL remodelling through TG	157
Chapter 5	Complete and partial <i>LCAT</i> deficiency differentially affect atherosclerosis	159
Chapter 6	Post-GWAS methodologies for localisation of functional non-coding variants: <i>ANGPTL3</i>	183
PART 3	Factors affecting triglycerides and carbohydrate metabolism	219
Chapter 7	Genetic and metabolic risk score models independently predict hypertriglyceridemia and cardiovascular disease risk	221
Chapter 8	The functional role of <i>Galnt2</i> in carbohydrate metabolism	253
Chapter 9	General discussion	285
Appendices	Summary	301
	Samenvatting	307
	Acknowledgements	313
	Curriculum vitae	319
	List of publications	323
