Acknowledgments

The presented work in this thesis was not even possible without the help and support from the people in my scientific and social environment. Therefore, the following section is very important for me. Through meeting all of you, I have gained much experience scientifically and personally.

First of all, I would like to thank my promotor Tamalika Banerjee for making it possible for me to work on the exciting field of topological insulators. Although these materials have been heralded as the new wonder material, it was in practice not easy to get grip on this rather complicated system for us. From the opportunity in this project to visit several conferences and performing experiments at external facilities, we gained a better understanding of this ‘blackbox’. I believe that the two publications that came out have been a useful contribution to the field and there is still a lot more to discover. Besides the scientific possibilities that were made possible, I have experienced your personal approach as pleasant during these four years.

I would further like to thank my co-promotor Bart van Wees for his suggestions in designing a geometry in order to electrically probe spin-momentum locking and to disentangle this from any artifacts, as presented in chapter 6. Additionally, towards the realization of the paper, I appreciated your suggestions that made the paper much stronger in the end. Furthermore, your comments at other occasions were very helpful for me, including those on my propositions.

Furthermore, I would like to thank Seongshik Oh and his group (Matthew Brahlek, Nikesh Koirala, Maryam Salehi, Jisoo Moon, and Pavel Shibayev) for useful discussions and a very convenient supply of Bi$_2$Se$_3$ films throughout the years. Without those samples, we could not even have started the quest for unravelling the mysteries of topological insulators. The quality of the films and the fast supply have been one of the solid factors in this project.

A big thanks further goes out to my collaborators from the High Field Magnet Laboratory in Nijmegen. Steffen Wiedmann, Sergio Pezzini, Mariëlle Meijer, Lucas Tang and Francesca Chiappini, your help and your friendly and open attitude to guiding me into the world of quantum oscillations were very much appreciated. Although the data was rather complex, I believe that we delivered a wonderful work that will be important for the understanding of quantum oscillations in the studied multichannel system.

The work on investigating the helicity dependence of photocurrents in Bi$_2$Se$_3$ has been a very interesting collaboration between our group and the group of Optical Condensed Matter Physics in Groningen. Although the work presented in chapter 4
is not conclusive, I think that we have gained a better understanding based on the analysis in that chapter. I would like to thank Ra’an an Tobey, Nilesh Awari, Qi Liu, and the group of Michael Gensch for this collaboration. I used to be scared of optics (and I still am a bit) but it was a really great experience outside my comfort zone. The touristic exploration outside the lab was very pleasant with all of you as well.

I have further supervised several students that have been mainly contributing to the work presented in chapter 3. I would like to thank Geert Hoogeboom, Arjan Burema, Bart Zillen, and Azadeh Rahimi for their dedication to their projects and the challenging discussions that we had. I hope that you all gained experience that you, Geert, Arjan, and Azadeh, will find useful for your PhD projects. Bart, I wish you success in obtaining your Masters degree. Try to keep up your scientific drive for the future.

Furthermore, I would like to thank my reading committee for giving useful feedback to my thesis. Prof. dr. Valenzuela, Prof. dr. Golden, and Prof. dr. ir. Kooi, your input and warm words about the thesis have been really appreciated. I am further thankful that you could make it to the defense itself.

Sander Kamerbeek, I would like to thank you for the support that I got when starting up the project in addition to your supervision during my Master’s. Your critical mind and scientific intuition lead to interesting discussions that in the end resulted in a beautiful paper together. I have been always impressed about your perseverance in research and the ease with which you (seem to) handle new physical concepts. I found out that this interest in understanding matter goes beyond the lab, which makes you easy to motivate for anything. Besides that, I am thankful for having you as a pleasant company during the MMM conferences and other social events. I wish you all the best for your future career as a clinical physicist.

Marcos Guimarães, I am thankful for your suggestion to dive into the field of topological insulators when I was looking for a Master project. I further like to thank you for the time when you supervised me for my Bachelor thesis and introduced me into the world of nanoscience. I always admired your drive for science combined with a good sense of humor, adding to a good atmosphere in the group. Sharing an office with you and Alok was a pleasure.

Furthermore, I would like to thank Jasper van den Berg for his help to develop the fabrication recipes in the first stage of this project. Your experience on treating large-area graphene helped me a lot in realizing devices. Besides that, you were positively contributing to the atmosphere in the group; especially when you had Jakko and Sander around you.

Fabrication of devices and analyzing them would never have been possible with our dedicated technical support team. Johan Holstein, Martijn de Roosz, Tom Schouten, and Herman Adema, your efforts should never be underestimated by anyone. Your flexibility and your experience are essential to keep all the equipment running. Martijn, your company during the lunch breaks and during the circuit training sessions was always pleasant. Furthermore, I would like to thank you for all the help with wire bonding my loose samples.

Besides the direct scientific support, I gained a lot of motivation and self-confidence from people and colleagues around me that have always supported me. Your support
Acknowledgments

has been invaluable for me and your company gave me the right distraction at the right moments.

Roald, we have started this journey in the same group four years ago. In the beginning, you were hesitant to start a PhD project and you have been facing issues in making sense out of your results. You were missing a sparring partner in doing so and in hindsight it would have been nice to cooperate more together. Nevertheless, you managed to finish your project, which was not always easy for me since it had an influence on your mood. However, I realized afterwards the meaning of our friendship. We have had nice experiences in visiting Hawai and festivals and I appreciated your passion for cooking which resulted in very tasty dishes. At last, I appreciated your relaxed attitude; especially towards proofreading some of the chapters in this thesis from which I received very useful feedback. Therefore, I am happy that you accepted to be my paranymph. I wish you all the best for you and Isabelle in the future.

Ludo, you joined our group half a year later than me and Roald. I have always regarded you as a superhuman since there is not much were you not good at (yes, there is some jealousy). Your discipline in work, your scientific intuition, maintaining your lovely family, challenging yourself in trying new sports, and all at the same time is impressive. Your share in the atmosphere of the group was very pleasant for me. I wish you, Maartje, Lievijn, and Rosalijne a beautiful future.

Nynke, your positive attitude was limitless. Your presence was essential for the good atmosphere in the group and you were able to always motivate me when it was tough at work. As I and Roald concluded, the group was not the same when you left. This, together with your sportive attitude as well as your participation in charity programs, makes you a colorful person. I have really enjoyed the time at Hawai together with you, Roald, and Sander.

Furthermore, I would like to thank my other colleagues at Physics of Nanodevices that positively contributed to the nice working environment. I want to especially mention Jing, Kumar, Xu, Jakko, Pep, Aisha, Crystal, Ping, Juliana, Alina, Bernard, Saurabh, Gaurav, Subir, Joost, Fasil, Ivan, Rick, Ewout, Eek, and Paul.

Jorge and Daniel, we have met six (!) years ago and so many beautiful things happened in between. Jorge, you were one of the first Master students that I met and got to know better. Your open attitude and your interest in discovering new things enabled to build up a very valuable friendship. This got a new dimension when I visited your family in Colombia, which was one of the most memorable trips in my life. Daniel, I got to know you a bit later throughout the master after you lost your dreadlocks. I believe that we found each other in having the same (critical) thoughts towards political issues and procedures within the master and the PhD program. Thereafter, we found out that we have more things in common; except for music where we could not find any overlap yet. Your relaxed attitude and your interest in people makes you a good person. The drive with which you do science is impressive but never forget that it has to be balanced with the right distractions. I was happy to hear that you would like to be one of my paranymphs. Guys, I believe that our different personalities led to the tight friendship; something I realized during our recent trip to Budapest. Thank you for all the nice moments and I hope that we can keep on seeing each other when our paths go in different directions.

Here, I further want to thank the rest of the Top Master’s cohort for the interesting
Acknowledgments

time. Tadesse, Jin, Mallikarjuna, Siddhartha, Juan, Solmaz, Nutifafa, Sander, and Piet, all the best for the future.

I was very happy to be part of different institutions that considered PhD students. First of all, I have been part of the beautiful organization called Gopher through which I got to know PhD students outside Nijenborgh 4. Antonija, Daniela, Els, and Simon, I believe that we have made out of Gopher a beautiful platform where PhD students can meet. We have organized awesome events, often based on our own interests. Thank you for your cooperation and the learning experience from which I gained a lot. Estefanía, Alberto, Mirjam, Olga, Carlos, Aline, Stefany, Olivier, Elwin, Frank, and Naomi, it has been a pleasure to get to know you. I wish you all the best in the finalizing stages of your projects, in case you have not finished yet, since I know that it can be a struggle sometimes. You are awesome people! Furthermore, I have participated in the Graduate School’s sounding board, which gave insights in the many facets of a PhD trajectory. Prof. dr. Rudolf, I think that we have reached a lot the past four years to improve the conditions for PhD students. I want to thank all the members of the sounding board for their input, too.

At last, I want to thank Hans Ploos van Amstel for his help at the right moment of my PhD project. The discussions that we had were necessary to maintain the drive and motivation to finalize the project.

Het laatste gedeelte van het dankwoord is gericht aan mijn dierbaren buiten de setting van de universiteit. Ondanks dat jullie misschien geen flauw idee hebben waar ik mij eigenlijk mee bezig heb gehouden, hebben jullie mij altijd gesteund in het behalen van mijn doctorstitel. Jullie hebben mij weten te aarden en mij laten inzien hoe bijzonder het behalen van deze titel is. Jullie aanwezigheid bij mijn verdediging is daarom waardevol voor mij. Zonder iedereen apart te noemen, ben ik er zeker van dat jullie weten dat ik jullie heel dankbaar ben. Graag wil ik een aantal mensen nog in het bijzonder noemen.

Hans en Rolf, het is moeilijk om jullie apart te bedanken. Ik ben erg dankbaar voor de gezellige momenten gedurende mijn laatste negen jaar in Groningen. De tijd is voorbij gevlogen, maar ik denk af en toe nog terug aan de mooie tijd. Ondanks dat we elkaar minder zien, voel ik me nog steeds verbonden met jullie.

Loes, onze vriendschap is speciaal voor mij. Ik voel me op mijn gemak bij jou en ik denk dat we elkaar goed begrijpen. Je hebt ervoor gekozen om bij je geliefde in Hoorn te gaan wonen, maar dat heeft geen problemen opgeleverd voor onze band.

Astrid, Erick, Niels en Sanne, jullie vormen de beste vrienden die ik me maar kan wensen. De overeenkomsten, maar ook verschillen verbinden ons en ik weet dat ik altijd op jullie kan rekenen. Ik ben blij dat jullie Antonija een welkom gevoel hebben gegeven; één van de krachten van deze toppers.

Ik ben ook erg dankbaar voor de steun die ik van mijn familie ontvangen heb. Ooms, tantes, neven en nichten, ondanks dat we elkaar niet heel veel spreken, zijn alle momenten samen goed en plezierig. Ik hoop dat we onze contacten kunnen onderhouden.

Tenslotte de belangrijkste mensen in mijn leven. Papa en mama, ik ben blij dat ik heb kunnen opgroeien in een stabiele omgeving en ik ben dankbaar voor alle mogelijkheden die jullie mij hebben kunnen bieden; iets wat ik me recenter ben gaan
realiseren. Ik weet zeker dat Marjon en ik ons geen betere ouders hadden kunnen wensen dan jullie. Ik kijk uit naar de mooie momenten die we samen nog gaan beleven. Marjon, je bent een topper en ik weet zeker dat je een superdokter zal worden. Je vriendelijkheid en empathisch vermogen zullen je daarbij helpen. Antonija, my love, you know that you are the most important person in my life. I believe that we got to know each other at exactly the right moment and that we have been supporting each other in good and in bad times from that moment onwards. Writing my thesis would not have been so easy with the right distractions. Besides the support, you have made me shine and enjoy life even more. Your critical mind has helped me to develop the values that I want to stand for in life. All in all, you have made me a better person. I am looking forward to spending the rest of my life with you and get old together. Volim te!
